FORWARD

For the purpose of this regulation, the competent authority shall be the General Civil Aviation Authority designated by the United Arab Emirates Federal Government, and known in this regulation as the “GCAA”.

The development of this regulation was through a GCAA led consultative committee the OTTG (Operators Technical Training Group) that included representatives from all segments of the aviation industry covered by, and impacted by this regulation.

Conformity with the Acceptable Means of Compliance (AMC) section of this regulation is mandatory unless other Alternative Means of Compliance have been submitted that result in an equivalent level of safety (or compliance) and approved to the GCAA.

Section	Details
AMC 66.70 (d) Conversion Provisions (Non UAE Licenses)	<ul style="list-style-type: none"> ▪ Added Category 3. The following ICAO licences are acceptable for conversion to a GCAA licence following completed GCAA approved structured validation program within recognized CAR 147 approved MTO, and an Aviation Legislation examination conducted by or on behalf of the GCAA, and a Human Factors examination conducted by the GCAA or a CAR 147 approved Maintenance Training Organisation: <ul style="list-style-type: none"> Ethiopia (Avionics License) ▪ Jordan Move to Category 1
APPENDIX I to AMC to CAR 66 : AIRCRAFT TYPE RATINGS FOR CAR 66 AIRCRAFT MAINTENANCE ENGINEERS LICENCE	<p><u>GROUP 1 AEROPLANES</u></p> <p>TC Holder - GULFSTREAM AEROSPACE Corporation</p> <p>Model - GVIII-2</p> <p>Com.des. G700 / G800</p> <p>CAR 66 Type rating endorsement - Gulfstream GVIII-2 (RR BR700)</p>

GENERAL

Certifying staff holding licences issued in accordance with CAR 66 in a given category/subcategory are deemed to have the privileges described in point 66.20(a) of this CAR corresponding to such a category/subcategory. The basic knowledge requirements corresponding to the new privileges shall be deemed as met for the purpose of extending such licence to a new category/sub-category.

Certifying staff holding a licence including aircraft which do not require an individual type rating may continue to exercise his/her privileges until the first renewal or change, where the licence shall be converted to the ratings defined in point 66.45 of this CAR.

For the purpose of time limits contained in points 66.25, 66.30 and Appendix III of CAR 66 related to basic knowledge examinations, basic experience, theoretical type training and examinations, practical training and assessment, type examinations and on the job experience completed before this Regulation applies, the origin of time shall be the date by which this Regulation applies.

The E-Services system which has now been fully adopted by the GCAA for the issue, renewal and type endorsement of an aircraft maintenance engineers licences as defined in point 66.10, and must be used for all applications. Each field must be completed in full as required, with the required attachments including passport copy. All licence applications for conversion as described in point 66.70 and section 4 appendix I, must also be made using the E-Licensing system. For the removal of limitations as described in points 66.45 and 66.50 the E-Licensing system must also be used. The GCAA reserve the right not to renew or issue a licence to any individual they deem unfit to maintain or hold a licence.

1. TECHNICAL REQUIREMENTS

SECTION 1 - AIRCRAFT MAINTENANCE ENGINEERS LICENCE

CAR 66.1 - Scope

This section defines the Aircraft Maintenance Engineers Licence and establishes the requirements for application, issue and continuation of its validity.

CAR 66.2 - Enforcement

The GCAA shall impose restrictions, suspend, limit or revoke any Aircraft Maintenance Engineers licence issued if the holder cannot demonstrate their capability to maintain the appropriate safety standards. Personnel granted with an Aircraft Maintenance Engineers licence shall not engage in, support or conceal unsafe acts.

CAR 66.3 - Licence categories

Aircraft maintenance licenses include the following categories and, where applicable, subcategories:

- (a) Category A, divided into the following subcategories:
 - A1 Aeroplanes Turbine;
 - A2 Aeroplanes Piston;
 - A3 Helicopters Turbine;
 - A4 Helicopters Piston.
- (b) Category B1, divided into the following subcategories:
 - B1.1 Aeroplanes Turbine;
 - B1.2 Aeroplanes Piston;
 - B1.3 Helicopters Turbine;
 - B1.4 Helicopters Piston.
- (c) Category B2
The B2 licence is applicable to all aircraft.
- (d) Category B3
The B3 licence is applicable to piston-engine non-pressurised aeroplanes of 2 000 kg Maximum Take-off Mass (MTOM) and below.
- (e) Category L, divided into the following subcategories:
 - L: hot-air balloons,
 - L: gas balloons,
 - L: hot-air airships,
 - L: gas airships,
- (f) Category C
The C licence is applicable to aeroplanes and helicopters.

GM 66.3 - Licence categories

Individual Aircraft Maintenance Engineers Licence holders need not be restricted to a single category. Provided that each qualification requirement is satisfied, any combination of categories may be granted

In the case of maintenance of mixed balloons (combination of gas and hot air), it is required to hold both L hot-air balloon and L gas balloon subcategories.

CAR 66.5 - Aircraft Groups

(a) For the purpose of ratings on aircraft maintenance engineers licenses aircraft shall be classified in the following groups.

- (1) Group 1: Complex motor-powered aircraft as well as multiple engine helicopters, aeroplanes with maximum certified operating altitude exceeding FL290, aircraft equipped with fly-by-wire systems, gas airships other than Category L and other aircraft requiring an aircraft type rating when defined so by the GCAA.

The GCAA may decide to classify into Group 2, Group 3 or Group 4, as appropriate, an aircraft which meets the conditions set out in the first subparagraph, if it considers that the lower complexity of the particular aircraft justifies so.

(2) Group 2: Aircraft other than those in group 1 belonging to the following subgroups:

(i) sub-group 2a:

- single turbo-propeller engine aeroplanes
- those turbojet and multiple-turboprop aeroplanes classified by the GCAA in this subgroup because of their lower complexity,

(ii) sub-group 2b:

- single turbine engine helicopters
- those multiple turbine helicopters classified by the GCAA in this subgroup because of their lower complexity.

(iii) sub-group 2c:

- single piston engine helicopters
- those multiple piston engine helicopters classified by the GCAA in this subgroup because of their lower complexity.

(3) Group 3: Piston engine aeroplanes other than those in Group 1.

(4) Group 4: Balloons and Airships other than those in Group 1.

GM 66.5 Aircraft Groups

The following table summarises the applicability of categories/subcategories of CAR 66 licenses versus the groups/subgroups of aircraft:

Category/subcategory	A, B1 and C	B2	B3	L
Groups				
1 — Complex motor-powered aircraft — Multi-engine helicopters — Aeroplanes above FL290 — Aircraft with fly-by-wire systems — Any other aircraft when defined by the GCAA	X	X		
1 — Gas airships other than Cat L	X	X		
2 2a: Single turboprop aeroplanes 2b: Single turbine helicopters 2c: Single piston helicopters	X	X		
3 — Piston engine aeroplanes	X	X		
3 — Piston engine aeroplanes (non-pressurised of 2000 kg MTOM and below)	X	X	X	
4 — Balloons — Airships not in Group 1		X		X

CAR 66.10 - Application

- An application for an Aircraft Maintenance Engineers Licence or amendment to such licence shall be made using the AMEL E-Licensing services application and/or any other assigned form, in a manner established by the General Civil Aviation Authority (GCAA), and submitted thereto.
- Each application shall be supported by documentation to demonstrate compliance with the applicable theoretical knowledge, practical training and experience requirements at the time of application.
- The organisation requesting the grant or amendment to a licence is responsible for the review of the application before making a recommendation to the GCAA.

AMC 66.10 – Application

- Maintenance experience should be written up in a manner that the reader has a reasonable understanding of where, when and what maintenance constitutes the experience. A task-by-task account is not necessary but at the same time a bland statement “X year’s maintenance experience

completed” is not acceptable. A logbook of maintenance experience is desirable and the GCAA require such a logbook to be kept. It is acceptable to cross-refer in the E-Licensing system to other documents containing information on maintenance.

- (b) Applicants claiming the maximum reduction in 66.30(a) total experience based upon successful completion of CAR 147 approved basic training should include the CAR 147 certificate of recognition for approved basic training.
- (c) Applicants claiming reduction in 66.30(a) total experience based upon successful completion of technical training in an organisation or institute recognised by the GCAA as a competent organisation or institute should include the relevant certificate of successful completion of training.
- (d) The GCAA will only accept legible photocopies of course certificates and foreign licenses if duly certified as a true copy by the applicant’s organisation. Persons certifying documents should hold a responsible position within the organisation, preferably at management level.

CAR 66.15 - Eligibility

An applicant for an Aircraft Maintenance Engineers Licence shall be at least 18 years of age.

AMC 66.15 – Eligibility

An applicant for an Aircraft Maintenance Engineers licence should meet one of the following eligibility criteria to apply for a GCAA AMEL.

- (a) A UAE/GCC (Gulf Co-Operation Council) national or
- (b) A legal employee of UAE approved organisation with proper justification for a need to hold a UAE GCAA aircraft maintenance engineers licence or
- (c) A graduate of a GCAA CAR 147 approved basic aircraft maintenance training organisation.

CAR 66.20 - Privileges

- (a) The following privileges shall apply:
 - (1) A category A aircraft maintenance engineers licence permits the holder to issue certificates of release to service following minor scheduled line maintenance and simple defect rectification within the limits of tasks specifically endorsed on the certification authorisation referred to in point 145.35 of CAR-145. The certification privileges shall be restricted to work that the licence holder has personally performed in the maintenance organisation that issued the certification authorisation.
 - (2) A category B1 aircraft maintenance engineers licence shall permit the holder to issue certificates of release to service and to act as B1 support staff following:
 - Maintenance performed on aircraft structure, powerplant and mechanical and electrical systems,

- Work on avionic systems requiring only simple tests to prove their serviceability and not requiring troubleshooting.
Category B1 includes the corresponding A subcategory.
- (3) A category B2 aircraft maintenance engineers licence shall permit the holder:
 - (i) to issue certificates of release to service and to act as B2 support staff for following:
 - maintenance performed on avionic and electrical systems, and
 - electrical and avionics tasks within powerplant and mechanical systems, requiring only simple tests to prove their serviceability; and
 - (ii) to issue certificates of release to service following minor scheduled line maintenance and simple defect rectification within the limits of tasks specifically endorsed on the certification authorisation referred to in point 145.35 of CAR-145. This certification privilege shall be restricted to work that the licence holder has personally performed in the maintenance organisation which issued the certification authorisation and limited to the ratings already endorsed in the B2 licence.
The category B2 licence does not include any A subcategory.
- (4) A category B3 aircraft maintenance engineers licence shall permit the holder to issue certificates of release to service and to act as B3 support staff for:
 - maintenance performed on aeroplane structure, powerplant and mechanical and electrical systems,
 - work on avionic systems requiring only simple tests to prove their serviceability and not requiring troubleshooting.
- (5) A category L aircraft maintenance licence shall permit the holder to issue certificate of release to service and to act as L support staff following:
 - maintenance performed on structures, powerplant and mechanical and electrical systems;
 - work on radio, Emergency Locator Transmitter (ELT) and transponder systems; and
 - work on avionic systems requiring simple tests to prove their serviceability.
- (6) A category C aircraft maintenance engineer's licence shall permit the holder to issue certificates of release to service following base maintenance on aircraft. The privileges apply to the aircraft in its entirety.
- (b) The holder of an aircraft maintenance engineers licence shall not exercise its privileges unless:
 - (1) in compliance with the applicable requirements of CAR M and CAR-145; and
 - (2) in the preceding 2-year period he/she has, either had 6 months of maintenance experience in accordance with the privileges granted by the aircraft maintenance engineers licence or, met the provision for the issue of the appropriate privileges; and
 - (3) he/she has the adequate competence to certify maintenance on the corresponding aircraft; and
 - (4) he/she is able to read, write and communicate to an understandable level in the language(s) in which the technical documentation and procedures necessary to support the issue of the certificate of release to service are written.

GM 66.20(a) - Privileges

(a) The following definitions apply:

Electrical system means the aircraft electrical power supply source, and the distribution system to the different components contained in the aircraft and relevant connectors. Lighting systems are also included in this definition. When working on cables and connectors, which are part of these electrical systems, the following typical practices are included in the privileges:

- Continuity, insulation and bonding techniques and testing;
- Crimping and testing of crimped joints;
- Connector pin removal and insertion;
- Wiring protection techniques.

Avionics system means an aircraft system that transfers, processes, displays, stores analogue, or digital data using data lines, data buses, coaxial cables, wireless or other data transmission medium, and includes the system's components and connectors. Examples of avionics systems include the following:

- Autoflight;
- Communication, Radar and Navigation;
- Instruments (see NOTE below);
- In-Flight Entertainment Systems;
- Integrated Modular Avionics (IMA);
- On-Board Maintenance Systems;
- Information Systems;
- Fly-by-Wire Systems (related to ATA27 "Flight Controls");
- Fibre Optic Control Systems.

NOTE: Instruments are formally included in the privileges of the B2 licence holders. However, maintenance on electromechanical and pitot-static components may also be released by a B1, B3 or L licence holder.

Simple test means a test described in approved maintenance data and meeting all the following criteria:

- The serviceability of the system can be verified using aircraft controls, switches, Built-in Test Equipment (BITE), Central Maintenance Computer (CMC) or external test equipment not involving special training.

- The outcome of the test is a unique go–no go indication or parameter, which can be a single value or a value within an interval tolerance. No interpretation of the test result or interdependence of different values is allowed.
- The test does not involve more than 10 actions as described in the approved maintenance data (not including those required to configure the aircraft prior to the test, i.e. jacking, flaps down, etc, or to return the aircraft to its initial configuration). Pushing a control, switch or button, and reading the corresponding outcome may be considered as a single step even if the maintenance data shows them separated.

Troubleshooting means the procedures and actions necessary to identify the root cause of a defect or malfunction using approved maintenance data. It may include the use of BITE or external test equipment.

Line maintenance means any maintenance that is carried out before flight to ensure that the aircraft is fit for the intended flight. It may include:

- Trouble shooting;
- Defect rectification;
- Component replacement with the use of external test equipment, if required.
- Component replacement may include components such as engines and propellers;
- Scheduled maintenance and/or checks including visual inspections that will detect obvious unsatisfactory conditions/discrepancies but do not require extensive in-depth inspection. It may also include internal structure, systems and powerplant items which are visible through quick opening access panels/doors;
- Minor repairs and modifications which do not require extensive disassembly and can be accomplished by simple means;
- For temporary or occasional cases (Airworthiness Directives, hereinafter AD; service bulletins, hereinafter SB) the quality manager may accept base maintenance tasks to be performed by a line maintenance organisation provided all requirements are fulfilled. The GCAA will prescribe the conditions under which these tasks may be performed.

Base Maintenance means any task falling outside the criteria that are given above for *Line Maintenance*.

NOTE:

Aircraft maintained in accordance with “progressive” type programs need to be individually assessed in relation to this paragraph. In principle, the decision to allow some “progressive” checks to be carried out is determined by the assessment that all tasks within the particular check can be carried out safely to the required standards at the designated line maintenance station.

- (b) The category B3 licence does not include any A subcategory. Nevertheless, this does not prevent the B3 licence holder from releasing maintenance tasks typical of the A1.2 subcategory for piston-engine

non-pressurised aeroplanes of 2 000 kg MTOM and below, within the limitations contained in the B3 licence.

- (c) The category C licence permits certification of scheduled base maintenance by the issue of a single certificate of release to service for the complete aircraft after the completion of all such maintenance. The basis for this certification is that the maintenance has been carried out by competent mechanics and category B1, B2, B3 and L support staff, as appropriate, have signed for the maintenance tasks under their respective specialisation. The principal function of the category C certifying staff is to ensure that all required maintenance has been called up and signed off by the category B1, B2, B3 and L support staff, as appropriate, before issue of the certificate of release to service. Only category C personnel who also hold category B1, B2, B3 or L qualifications may perform both roles in base maintenance.

AMC 66.20(b)2 - Privileges

- (a) The 6 months maintenance experience in 2 years should be understood as consisting of two elements, duration and nature of the experience. The minimum to meet the requirements for these elements may vary depending on the size and complexity of the aircraft and type of operation and maintenance.

(1) Duration:

Within an approved maintenance organisation:

- 6 months continuous employment within the same organisation; or
- 6 months split up into different blocks, employed within the same or in different organisations.

The 6 months period can be replaced by 100 days of maintenance experience in accordance with the privileges, whether they have been performed within an approved organisation or as independent certifying staff according to CAR M.801 (b) or as a combination thereof.

When the licence holder maintains and releases aircraft in accordance with CAR M.801 (b) 3, in certain circumstances this number of days may even be reduced by 50% when agreed in advance by the GCAA. These circumstances consider the cases where the holder of a CAR 66 licence happens to be the owner of an aircraft and carries out maintenance on his own aircraft, or where a licence holder maintains an aircraft operated for low utilisation, that does not allow the licence holder to accumulate the required experience. This reduction should not be combined with the 20% reduction permitted when carrying out technical support, or maintenance planning, continuing airworthiness management or engineering activities. To avoid a too long period without experience, the working days should be spread over the intended 6 months period.

(2) Nature of the experience:

Depending on the category of the Aircraft Maintenance Engineers Licence, the following activities are considered relevant for maintenance experience:

- Servicing;
- Inspection;
- Operational and functional testing;
- Trouble-shooting;

- Repairing;
- Modifying;
- Changing component;
- Supervising these activities;
- Releasing aircraft to service.

For category A certifying staff, the experience should include exercising the privileges, by means of performing tasks related to the authorisation on at least one aircraft type for each licence subcategory. This means tasks as mentioned in AMC 145.30(g), including servicing, component changes and simple defect rectifications.

For category B1, B2, B3 and L, for every aircraft type rating included in the authorisation the experience should be on that particular aircraft or on a similar aircraft within the same licence (sub) category. Two aircraft can be considered as similar when they have similar technology, construction and comparable systems, which means equally equipped with the following (as applicable to the licence category):

- Propulsion systems (piston or turboprop or turbofan or turbo shaft or jet-engine or push propellers); and
- Flight control systems (only mechanical controls or hydro-mechanically powered controls or electro-mechanically powered controls); and
- Avionic systems (analog systems or digital systems); and
- Structure (manufactured of metal or composite or wood).

For licences endorsed with (sub) group ratings;

- In the case of a B1 licence endorsed with sub group ratings (either manufacturer sub group or sub full group) as defined in CAR 66.45 the holder should show experience on at least one aircraft type per sub group and per aircraft structure (metal, composite, wood).
- In the case of a B2 licence endorsed with sub group ratings (either manufacturer sub group or full group) as defined in CAR 66.45 the holder should show experience on at least one aircraft type per sub group.
- In the case of a B3 licence endorsed with the rating “piston-engine non-pressurised aeroplanes of 2 000 kg MTOM and below” as defined in 66.45, the holder should show experience on at least one aircraft type per aircraft structure (metal, composite or wood).

For category C, the experience should cover at least one of the aircraft types endorsed on the licence.

For a combination of categories, the experience should include some activities of the nature shown in paragraph 2 in each category.

A maximum of 20% of the experience duration required may be replaced by the following relevant activities on an aircraft type of similar technology, construction and with comparable systems:

- Aircraft maintenance related training as an instructor/assessor or as a student;
- Maintenance technical support/engineering;
- Maintenance management/planning.

The experience should be documented in an individual log book or in any other recording system (which may be an automated one) containing the following data:

- Date;
- Aircraft type;
- Aircraft identification i.e. registration;
- ATA chapter;
- Operation performed i.e. 100 FH check, MLG wheel change, engine oil check and complement, SB embodiment, trouble shooting, structural repair, STC embodiment;
- Type of maintenance i.e. base, line;
- Type of activity i.e. perform, supervise, release;
- Subcategory used (A1, A2, A3, A4, B1.1, B1.2, B1.3, B1.4, B2, B3, C or L);
- Duration in days or partial-days.

GM 66.20(b)2- Privileges

The sentence ‘*met the provision for the issue of the appropriate privileges*’ included in 66.20(b)2 means that during the previous 2 years the person has met all the requirements for the endorsement of the corresponding aircraft rating (for example, in the case of aircraft in Group 1, theoretical plus practical element plus, if applicable, on-the-job training). This supersedes the need for 6 months of experience for the first 2 years. However, the requirement of 6 months of experience in the preceding 2 years will need to be met after the second year.

AMC 66.20(b)3- Privileges

The wording “*has the adequate competence to certify maintenance on the corresponding aircraft*” means that the licence holder and, if applicable, the organisation where he/she is contracted/employed, should ensure that he/she has acquired the appropriate knowledge, skills, attitude and experience to release the aircraft being maintained. This is essential because some systems and technology present in the particular aircraft being maintained may not have been covered by the training/examination/experience required to obtain the licence and ratings.

This is typically the case, among others, in the following situations:

- Type ratings that have been endorsed on a licence in accordance with Appendix I to AMC to CAR 66 “List of Type Ratings” after attending type training/on-the-job experience which did not cover all the models/variants included in such rating. For example, a licence endorsed with the rating Airbus A318/A319/A320/A321 (CFM56) after attending type training/on-the-job experience covering only the Airbus A320 (CFM56).

- Type ratings, which have been endorsed on a licence in accordance with Appendix I to AMC to CAR 66 “List of Type Ratings” after a new variant has been added to the rating in Appendix I, without performing difference training. For example, licence endorsed with the rating Boeing 737-600/700/800/900 for a person who already had the rating Boeing 737-600/700/800, without performing any difference training for the 737-900.
- Work being carried out on a model/variant for which the technical design and maintenance techniques have significantly evolved from the original model used in the type training/on-the-job experience.
- Specific technology and options selected by each customer, which may not have been covered by the type training/on-the-job experience.
- Changes in the basic knowledge requirements of Appendix I to CAR 66 not requiring re-examination of existing licence holders (grandfathered privileges).
- The endorsement of group/subgroup ratings based on experience on a representative number of tasks/aircraft or based on type training/examination on a representative number of aircraft.
- Persons meeting the requirements of 6 months of experience every 2 years only on certain similar aircraft types as allowed by AMC 66.20(b)2.
- Persons holding a CAR 66 licence with limitations, obtained through conversion of qualifications (66.70), where such limitations are going to be lifted after performing the corresponding basic knowledge examinations. In this case, the type ratings endorsed in the licence may have been obtained in the national system without covering all the aircraft systems (because of the previous limitations) and there will be a need to assess and, if applicable, to train this person on the missing systems.

GM 66.20(b) 4 - Privileges

- (a) Holders of a CAR 66 Aircraft Maintenance Engineers Licence may only exercise certification privileges when they have a general knowledge of the language used within the maintenance environment including knowledge of common aeronautical terms in the language. The level of knowledge should be such that the licence holder is able to:
- read and understand the instructions and technical manuals used for the performance of maintenance;
 - make written technical entries and any maintenance documentation entries, which can be understood by those with whom they are normally required to communicate;
 - read and understand the maintenance organisation procedures;
 - communicate at such a level as to prevent any misunderstanding when exercising certification privileges.
- (b) In all cases, the level of understanding should be compatible with the level of certification privileges exercised.

CAR 66.25 Basic knowledge requirements

- (a) For an aircraft maintenance licence other than category L, an applicant for an aircraft maintenance engineer's licence or the addition of a category or subcategory to such an aircraft maintenance engineers licence shall demonstrate, by examination, a level of knowledge in the appropriate subject modules in accordance with Appendix I to this CAR. The basic knowledge examinations shall be conducted by a training organisation appropriately approved under CAR 147 or by the GCAA. All examinations conducted outside the GCAA must be conducted by the same GCAA approved training organisation. Approved training may be carried out by another training provider if the provisions of AMC 66.25 (3) have been adopted by a CAR 147 approved basic training organisation.
- (b) An applicant for an aircraft maintenance licence in the category L shall demonstrate by examination a level of knowledge of appropriate subject modules in accordance with Appendix VI. The examination shall comply with the standard described in Appendix VII and shall be conducted by a training organization appropriately approved under CAR 147 or as agreed by the GCAA.
- (c) The training courses and examinations shall have been passed within 10 years prior to the application for an aircraft maintenance engineers licence or the addition of a category or subcategory to such aircraft maintenance engineers licence. Should this not be the case, examination credits may however be obtained in accordance with point (c).
- (d) The applicant may apply to the GCAA for full or partial examination credit to the basic knowledge requirements for.
 - (1) basic knowledge examinations that do not meet the requirement described in point (b) above; and
 - (2) Any other technical qualification considered by the GCAA to be equivalent to the knowledge standard of CAR 66.
- (e) Credits expire 10 years after they were granted to the applicant by the GCAA. The applicant may apply for new credits after expiration.
- (f) The GCAA may conduct an oral examination, assessment or interview with any applicant for a basic licence.

AMC 66.25 - Basic knowledge requirements

- (a) For an applicant being a person qualified by holding an academic degree or HND in an aeronautical, mechanical or electronic discipline from a recognised university or other higher educational institute the need for any examination will depend upon the course taken in relation to Appendix I to CAR 66
- (b) Knowledge gained and examinations passed during previous experiences, for example, in military aviation and civilian apprenticeships will be credited where the GCAA is satisfied that such knowledge and examinations are equivalent to that required by Appendix I to CAR 66.
- (c) Approved training may be carried out at a different CAR 147 approved basic training organisation provided the training organisation has a procedure approved by the GCAA for accepting such applicants. A declaration shall be made by both the applicant and the training organisation before making application to the GCAA. (CAR 66.10 refers).

GM 66.25(a) (1) - Basic knowledge requirements

The levels of knowledge for each licence (sub) category are directly related to the complexity of certifications related to the corresponding licence (sub)category which means that category A should demonstrate a limited but adequate level of knowledge, whereas category B1, B2 and B3 should demonstrate a complete level of knowledge in the appropriate subject modules.

GM 66.25(a)(2) – Basic knowledge requirements

“As agreed by the GCAA” means that the examination is conducted by an organisation under a formal agreement with and the oversight of the GCAA.

CAR 66.30 - Basic Experience requirements

(a) An applicant for an aircraft maintenance engineers licence shall have acquired:

(1) for category A and subcategories B1.2 and B1.4 and category B3:

- (i) 3 years of practical maintenance experience on operating aircraft, if the applicant has no previous relevant technical training; or
- (ii) 2 years of practical maintenance experience on operating aircraft and completion of training considered relevant by the GCAA as a skilled worker, in a technical trade; or
- (iii) 1 year of practical maintenance experience on operating aircraft and completion of a basic training course approved in accordance with CAR 147.

or category B2 and subcategories B1.1 and B1.3:

- (i) 5 years of practical maintenance experience on operating aircraft if the applicant has no previous relevant technical training; or
- (ii) 3 years of practical maintenance experience on operating aircraft and completion of training considered relevant by the GCAA as a skilled worker, in a technical trade; or
- (iii) 2 years of practical maintenance experience on operating aircraft and completion of a basic training course approved in accordance with CAR 147

(2) For category L

2 Years of practical maintenance experience on operating balloons/airships covering a representative cross section of maintenance activities in the corresponding subcategory.

(3) for category C with respect to large aircraft:

- (i) 3 years of experience exercising category B1.1, B1.3 or B2 privileges on large aircraft or as CAR 145 B1.1, B1.3 or B2 support staff, or, a combination of both; or
- (ii) 5 years of experience exercising category B1.2 or B1.4 privileges on large aircraft or as CAR 145 B1.2 or B1.4 support staff, or a combination of both; or

(4) for category C with respect to other than large aircraft: 3 years of experience exercising category B1 or B2 privileges on other than large aircraft or as CAR 145 B1.1, B1.3 or B2 support staff, or, a combination of both; or

(5) for category C obtained through the academic route: an applicant holding an academic degree in a technical discipline, from a university or other higher educational institution recognised by the GCAA, three years of experience working in a civil aircraft maintenance environment on a

representative selection of tasks directly associated with aircraft maintenance including six months of observation of base maintenance tasks.

- (b) An applicant for an extension to an Aircraft Maintenance Engineers Licence shall have a minimum civil aircraft maintenance experience requirement appropriate to the additional category or subcategory of licence applied for as defined in Appendix IV to this CAR.
- (c) The experience shall be practical and involve a representative cross section of maintenance tasks on aircraft.
- (d) At least one year of the required experience shall be recent maintenance experience on aircraft of the category/subcategory for which the initial Aircraft Maintenance Engineers Licence is sought. For subsequent category/subcategory additions to an existing Aircraft Maintenance Engineers Licence, the additional recent maintenance experience required may be less than one year, but shall be at least three months. The required experience shall be dependent upon the difference between the licence category/subcategory held and applied for. Such additional experience must shall be typical of the new licence category/subcategory sought.
- (e) Notwithstanding paragraph (a), aircraft maintenance experience gained outside a civil aircraft maintenance environment shall be accepted when such maintenance is equivalent to that required by this CAR as established by the GCAA. Additional experience of civil aircraft maintenance shall, however, be required to ensure adequate understanding of the civil aircraft maintenance environment.
- (f) Experience shall have been acquired within the 10 years preceding the application for an Aircraft Maintenance Engineers Licence or the addition of a category or subcategory to such a licence.
- (g) The practical experience shall be conducted at and under the control of a maintenance organisation appropriately approved for the maintenance and shall be assessed by a designated assessor appropriately qualified.
- (h) In order to facilitate the verification by the GCAA, demonstration of practical experience shall consist of detailed worksheet/log book and compliance report completed by designated assessor demonstrating how the practical experience meets this CAR.

AMC 66.30(a) - Basic experience requirements

- (a) For a category C applicant holding an academic degree the representative selection of tasks should include the observation of hangar maintenance, maintenance planning, quality assurance, record-keeping, approved spare parts control and engineering development.
- (b) While an applicant to a CAR 66 category C licence may be qualified by having 3 years' experience as category B1 or B2 certifying staff only in line maintenance, it is however recommended that any applicant to a category C holding a B1 or B2 licence demonstrate at least 12 months experience as a B1 or B2 support staff.
- (c) A skilled worker is a person who has successfully completed a course of training, acceptable to the GCAA, involving the manufacture, repair, overhaul or inspection of mechanical, electrical or electronic equipment. The training would include the use of tools and measuring devices.
- (d) Maintenance experience on operating aircraft:

- Means the experience of being involved in maintenance tasks on aircraft which are being operated by airlines, air taxi organisations, aero clubs, owners, etc, as relevant to the licence category/subcategory;
 - Should cover a wide range of tasks in length, complexity and variety;
 - Aims at gaining sufficient experience in the real environment of maintenance as opposed to only the training school environment;
 - May be gained within different types of maintenance organisations (CAR 145, M.A. Subpart F, Part-145, FAR-145,) or under the supervision of independent certifying staff; however at least 50% of the required experience period must be gained at GCAA approved organizations within UAE territory or as otherwise agreed by the GCAA.
 - May be combined with CAR 147 approved training (or other training approved by GCAA) so that periods of training can be intermixed with periods of experience, similar to an apprenticeship.
 - In the case of licence in the category L, may be full-time or part-time, either as professional or on a voluntary basis.
 - In the case of the L licence it is acceptable that the two year experience required covers maintenance performed only during the weekends (or equivalent periods) as long as the applicant has achieved a sufficient level of competency related to the licence category as attested by the corresponding statement(s) issued by the maintenance organisation(s) or independent certifying staff who supervised the applicant.
- (e) In the case of an applicant for a licence including several categories/subcategories, it is acceptable to combine the periods of experience as long as there is a sufficient experience for each category/subcategory during the required period. Examples:
- Application for a B1.1 (turbine aeroplanes) + B1.3 (turbine helicopters): CAR 66 requires 5 years of experience for B1.1 and 5 years of experience for B1.3 for an applicant with no relevant previous technical training:
 - It is not acceptable to combine the experience in a single 5-year period where the applicant has been working for 3 years on turbine aeroplanes and 2 years on turbine helicopters.
 - However, it is acceptable to combine the experience in a single 5-year period if the applicant has been working for 5 years on turbine aeroplanes and turbine helicopters (for example, aeroplanes in the morning, helicopters in the afternoon, or a few days every week on aeroplanes and a few days every week on helicopters).
 - Application for a B1.1 (turbine aeroplanes) + B2 (avionics): The Regulation requires 5 years of experience for B1.1 and 5 years of experience for B2 for an applicant with no relevant previous technical training.
 - It is not acceptable to combine the experience in a single 5-year period where the applicant has been working for 3 years on turbine aeroplanes (with no avionics work) and 2 years on avionics systems.
 - However, it is acceptable to combine the experience in a single 5-year period if the applicant has been working for 5 years on structures, powerplant, mechanical and electrical systems and avionics (for B1.1 tasks in the morning, B2 tasks in the afternoon, or a few days every week for B1.1 tasks and a few days every week for

B2 tasks).

- Application for a B1.1, B1.2, B1.3, B1.4 and B2: The Regulation requires 5 years of experience for B1.1, B1.3 and B2 and 3 years of experience for B1.2 and B1.4 for an applicant with no relevant previous technical training.
- In this case, it is very unlikely that the experience for each category/subcategory would be sufficient.

AMC 66.30(d) - Basic experience requirements

To be considered as recent experience; at least 50% of the required 12 month experience should be gained within the 12 month period prior to the date of application for the Aircraft Maintenance Engineers Licence. The remainder of the experience should have been gained within the 7 year period prior to application. It must be noted that the rest of the basic experience required by 66.30 must be obtained within the 10 years prior to the application as required by 66.30(f). The evidence of the experience acquired can be shown as a documented schedule of works experience log book compiled in ATA format.

AMC 66.30(e) - Basic experience requirements

- (a) For category A the additional experience of civil aircraft maintenance should be a minimum of 6 months. For category B1, B2 or B3 the additional experience of civil aircraft maintenance should be a minimum of 12 months.
- (b) Aircraft maintenance experience gained outside a civil aircraft maintenance environment can include aircraft maintenance experience gained in armed forces, coast guards, police etc. or in aircraft manufacturing.

CAR 66.40 - Continued validity of the Aircraft Maintenance Engineers Licence

- (a) The Aircraft Maintenance Engineers Licence becomes invalid eight years after its last issue, unless the holder submits his/her Aircraft Maintenance Engineers Licence to the GCAA, in order to verify that the information contained in the licence is the same as that contained in the GCAA records.
- (b) For a licence that has expired for more than 2 years following the expiry date on the licence the holder will be required to
 - (1) Complete a declaration stating that he/she has not exercised the privileges of the licence since the expiry date, together with a supporting letter from the Quality Department and pass a GCAA Aviation Legislation examination.
 - (2) If the applicant does not currently work for a GCAA approved organisation the applicant will be required to complete a declaration stating that he/she has not exercised the privileges of the licence since the expiry and pass a GCAA Aviation Legislation examination.
- (c) The holder of an Aircraft Maintenance Engineers Licence shall complete the relevant fields in the E-Licensing system and submit it with the holder's copy of the licence to the GCAA, unless the holder works in a maintenance organisation approved in accordance with CAR 145 that has a procedure in its

exposition whereby such organisation may submit the necessary documentation on behalf of the Aircraft Maintenance Engineers Licence holder.

- (d) Any certification privileges based upon an Aircraft Maintenance Engineers Licence becomes invalid as soon as the Aircraft Maintenance Engineers Licence is invalid.
- (e) The Aircraft Maintenance Engineers Licence is only valid
 - (1) when issued and/or amended by the GCAA and
 - (2) when the holder has signed the document.

GM 66.40 - Continued validity of the Aircraft Maintenance Engineers Licence

Validity of the Aircraft Maintenance Engineers Licence is not affected by recency of maintenance experience whereas the validity of the CAR 66.20 privileges is affected by maintenance experience as specified in CAR 66.20(b).

CAR 66.45 - Endorsement with aircraft ratings

- (a) In order to be entitled to exercise certification privileges on a specific aircraft type, the holder of an Aircraft Maintenance Engineer Licence shall have his/her licence endorsed with the relevant aircraft ratings.
 - For category B1, B2 or C the relevant aircraft ratings are the following:
 - 1. For group 1 aircraft, the appropriate aircraft type rating.
 - 2. For group 2 aircraft, the appropriate aircraft type rating, manufacturer sub-group rating or full sub-group rating.
 - 3. For group 3 aircraft, the appropriate aircraft type rating or full group rating.
 - For category B3, the relevant rating is 'piston-engine non-pressurised aeroplanes of 2 000 kg MTOM and below'.
 - For category A, no rating is required, subject to compliance with the requirements of point 145.35 of CAR-145.
- (b) The endorsement of aircraft type ratings requires the satisfactory completion of the relevant category B1, B2 or C aircraft type training.
- (c) In addition to the requirement of point (b), the endorsement of the first aircraft type rating within a given category/sub-category requires satisfactory completion of the corresponding On the Job Experience, as described in Appendix III to CAR 66.
- (d) By derogation from points (b) and (c), for group 2 and 3 aircraft, aircraft type ratings may also be granted after:

- satisfactory completion of the relevant category B1, B2 or C aircraft type examination described in Appendix III to CAR 66, and
- in the case of B1 and B2 category, demonstration of practical experience on the aircraft type. In that case, the practical experience shall include a representative cross section of maintenance activities relevant to the licence category.

In the case of a category C rating for a person qualified by holding an academic degree as specified in point 66.30(a)(5), the first relevant aircraft type examination shall be at the category B1 or B2 level.

(e) For group 2 aircraft:

- (1) the endorsement of manufacturer sub-group ratings for category B1 and C licence holders requires complying with the aircraft type rating requirements of at least two aircraft types from the same manufacturer which combined are representative of the applicable manufacturer sub-group;
- (2) the endorsement of full sub-group ratings for category B1 and C licence holders requires complying with the aircraft type rating requirements of at least three aircraft types from different manufacturers which combined are representative of the applicable sub-group;
- (3) the endorsement of manufacturer sub-groups and full sub-group ratings for category B2 licence holders requires demonstration of practical experience which shall include a representative cross section of maintenance activities relevant to the licence category and to the applicable aircraft sub-group.

(f) For group 3 aircraft:

- (1) the endorsement of the full group 3 rating for category B1, B2 and C licence holders requires demonstration of practical experience, which shall include a representative cross section of maintenance activities relevant to the licence category and to the group 3. for category B1, unless the applicant provides evidence of appropriate experience, the group 3 rating shall be subject to the following limitations, which shall be endorsed on the licence:
 - pressurised aeroplanes
 - metal structure aeroplanes
 - composite structure aeroplanes
 - wooden structure aeroplanes
 - aeroplanes with metal tubing structure covered with fabric.

(g) For the B3 licence:

- (1) the endorsement of the rating "piston-engine non-pressurised aeroplanes of 2 000 kg MTOM and below" requires demonstration of practical experience which shall include a representative cross-section of maintenance activities relevant to the licence category.

(2) unless the applicant provides evidence of appropriate experience, the rating referred to in point 1 shall be subject to the following limitations, which shall be endorsed on the licence:

- wooden structure aeroplanes
- aeroplanes with metal tubing structure covered with fabric
- metal structure aeroplanes
- composite structure aeroplanes.

(h) For the L licence:

The endorsement of ratings requires demonstration of appropriate balloon/airship manufacture training and practical experience which shall include a representative cross section of maintenance activities relevant to the category/subcategory.

AMC 66.45(e) - Endorsement with aircraft ratings

(a) For the granting of manufacturer subgroup ratings for Group 2 aircraft, for B1 and C licence holders, the sentence *“at least two aircraft types from the same manufacturer which combined are representative of the applicable manufacturer subgroup”* means that the selected aircraft types should cover all the technologies relevant to the manufacturer subgroup in the following areas:

- Flight control systems (mechanical controls/hydro mechanically powered controls/ electromechanically powered controls); and
- Avionic systems (analogue systems/digital systems); and
- Structure (manufactured of metal/composite/wood).

In cases where there are very different aircraft types within the same manufacturer Subgroup, it may be necessary to cover more than two aircraft types to ensure adequate representation.

For this purpose it may be possible to use aircraft types from the same manufacturer Classified in Group 1 as long as the selected aircraft belong to the same licence subcategory for which the rating will be endorsed. For the granting of full subgroup ratings for Group 2 aircraft, for B1 and C licence holders, the sentence *“at least three aircraft types from different manufacturers which combined are representative of the applicable subgroup”* means that the selected aircraft types should cover all the technologies relevant to the manufacturer subgroup in the following areas:

- Flight control systems (mechanical controls/hydro mechanically powered controls/ electromechanically powered controls); and
- Avionic systems (analogue systems/digital systems); and
- Structure (manufactured of metal/composite/wood).

In cases where there are very different aircraft types within the same subgroup, it may be necessary to cover more than three aircraft types to ensure adequate representation. For this purpose it may be possible to use aircraft types from different manufacturers classified in Group 1 as long as the selected aircraft belong to the same licence subcategory for which the rating will be endorsed.

- (b) For manufacturer subgroup ratings, the term “*manufacturer*” means the TC holder defined in the certification data sheet, which is reflected in the list of type ratings in Appendix I to AMC to CAR 66.

In the case of an aircraft rating where the type rating refers to a TC holder made of a combination of two manufacturers which produce a similar aircraft (i.e. AGUSTA/BELL HELICOPTER TEXTRON or any case of aircraft similarly built by another manufacturer), this combination should be considered as one manufacturer.

As a consequence:

- When a licence holder gets a manufacturer type or a manufacturer subgroup rating made of a combination of manufacturers, it covers the combination of such manufacturers.
- When a licence holder who intends to endorse a full subgroup rating selects three aircraft from different manufacturers, this means from different combinations of manufacturers as applicable.

AMC 66.45(d),(e)3,(f)1,(g)1 and (h) - Endorsement with aircraft ratings

- (a) The “*practical experience*” should cover a representative cross section including at least 50 % of tasks contained in Appendix II to AMC relevant to the licence category and to the applicable aircraft type ratings or aircraft (sub)group ratings being endorsed. This experience should cover tasks from each paragraph of the Appendix II list. Other tasks than those in the Appendix II may be considered as a replacement when they are relevant. In the case of (sub)group ratings, this experience may be shown by covering one or several aircraft types of the applicable (sub)group and may include experience on aircraft classified in group 1, 2 and/or 3 as long as the experience is relevant. The practical experience should be obtained under the supervision of authorised certifying staff.
- (b) In the case of endorsement of individual type ratings for Group 2 and Group 3 aircraft, for the second aircraft type of each manufacturer (sub)group the practical experience should be reduced to 30 % of the tasks contained in Appendix II to AMC relevant to the licence category and to the applicable aircraft type. For subsequent aircraft types of each manufacturer (sub)group this should be reduced to 20 %.

Practical experience should be demonstrated by the submission of records or a logbook showing the Appendix II tasks performed by the applicant. Typical data to be recorded are similar to those described in AMC 66.20(b)2.

GM 66.45(b) - Endorsement with aircraft ratings

An aircraft type rating includes all the aircraft models/variants listed in column 2 of Appendix 1 to AMC to CAR 66.

When a person already holds a type rating on the licence and such type rating is amended in the Appendix I to AMC to CAR 66 in order to include additional models/variants, there is no need for additional type training for the purpose of amending the type rating in the licence. The rating should be amended to include the new variants, upon request by the applicant, without additional requirements. However, it is the responsibility of the licence holder and, if applicable, the maintenance organisation where he/she is

employed to comply with 66.20(b)3, 145.35(a) and M.607(a), as applicable, before he/she exercises certification privileges.

Similarly, type training courses covering certain, but not all the models/variants included in a type rating, are valid for the purpose of endorsing the full type rating.

GM 66.45 - Endorsement with aircraft ratings

The following table shows a summary of the aircraft rating requirements contained in 66.45, 66.50 and Appendix III to CAR 66.

The table contains the following:

- The different aircraft groups;
- For each licence (sub)category, which ratings are possible (at the choice of the applicant):
 - (i) Individual type ratings;
 - (ii) Full and/or Manufacturer (sub)group ratings;
- For each rating option, which are the qualification options;
- For the B1.2 licence (Group 3 aircraft) and for the B3 licence (piston-engine non-pressurised aeroplanes of 2 000 kg MTOM and below), which are the possible limitations to be included in the licence if not sufficient experience can be demonstrated in those areas.

Note: OJE means “On-the-Job Experience” (Appendix III to CAR 66, Section 6) and is only required for the first aircraft rating in the licence (sub) category.

Aircraft rating requirements

---	---	--	-----------------------

CAR 66.50 - Limitations

- (a) Limitations introduced on an Aircraft Maintenance Engineers Licence are exclusions from the certification privileges and affect the aircraft in its entirety.
- (b) For limitations referred to in point 66.45, limitations shall be removed upon:
 - (1) demonstration of appropriate experience; or
 - (2) after a satisfactory practical assessment performed by the GCAA.
- (c) For limitations referred to in point 66.70 (c), limitations shall be removed upon satisfactory completion of examination on those modules/subjects defined in appendix 1 to CAR 66.50(c) and compliance with the relevant experience requirements.

AMC 66.50(b) - Limitations

- (a) The appropriate experience required to remove the limitations referred to in 66.45(f) and (g) should consist of the performance of a variety of tasks appropriate to the limitations under the supervision of authorised certifying staff. This should include the tasks required by a scheduled annual inspection. Alternatively, this experience may also be gained, if agreed by the GCAA, by theoretical and practical training provided by the manufacturer, as long as an assessment is further carried out and recorded by this manufacturer.
- (b) It may be acceptable to have this experience on just one aircraft type, provided that this type is representative of the (sub) group in relation to the limitation being removed.
- (c) The application for the limitation removal should be supported by a record of experience signed by the authorised certifying staff or by an assessment signed by the manufacturer after completion of the applicable theoretical and practical training.

CAR 66.55 - Evidence of qualification

Personnel exercising certification privileges as well as support staff shall produce their licence, as evidence of qualification, within 24 hours upon request from an authorised person.

CAR 66.70 - Conversion provisions

- (a) The holder of a certifying staff qualification valid in the UAE, prior to the date of entry into force of this CAR shall be issued an Aircraft Maintenance Engineers Licence by the GCAA without further examination subject to the conditions specified in para (c).
- (b) A person undergoing a certifying staff qualification process valid, prior to the date of entry into force of this CAR may continue to be qualified. The holder of a certifying staff qualification gained following such qualification process shall be issued an Aircraft Maintenance Engineers Licence without further examination subject to the conditions specified in para (c).
- (c) Where necessary, the Aircraft Maintenance Engineers Licence shall contain limitations in accordance with point 66.50 to reflect the differences between:
 - (1) the scope of the certifying staff qualification valid before the entry into force of this Regulation and.

- (2) the basic knowledge requirements and the basic examination standards laid down in Appendix land II to this CAR.
- (d) By derogation to paragraph (c) for aircraft not involved in commercial air transport other than large aircraft, the Aircraft Maintenance Engineers Licence shall contain limitations in accordance with point 66.50 to ensure that the certifying staff privileges valid before the entry into force of this Regulation and the privileges of the converted CAR 66 Aircraft Maintenance Engineers Licence remain the same.

AMC 66.70 - Conversion provisions

- (a) As described in CAR 66.70, the conversion provisions apply to the holder of a certifying staff qualification valid prior to the date of entry into force of CAR 66. The sentence the holder of a certifying staff qualification valid, means any person who had a qualification valid allowing that person the performance of activities identical to the privileges of “certifying staff” contained in CAR 66. This means that the signature of that person was sufficient to declare that the maintenance had been properly performed and the aircraft was ready for service and fit for flight in respect to such maintenance.

This should not be mistaken for the responsibilities linked to the airworthiness review, which was performed at different periods (typically varying from 6 months to 3 years) in the national systems. This is an activity which is performed at very specific points of time and not after every maintenance activity. As an airworthiness review (or equivalent term used in the national systems) is not performed after every maintenance event before the aircraft takes flight, an airworthiness review cannot be considered as a maintenance release. This means that the conversion provisions described in 66.70 are not applicable to persons performing airworthiness review functions unless their signature was required after every maintenance event before the aircraft can take flight.

- (b) The conversion applies to “certifying staff qualifications” such as, for example:
- Holding a national licence (or completed the process to obtain such a national licence);
 - Having completed a qualification process defined by the GCAA to become certifying staff;
 - Having completed the qualification requirements for certifying staff within a maintenance organisation, as defined in their procedures.

This does not mean that in order to be entitled to a conversion process, the applicant has to be exercising certification privileges. A person may hold a “certifying staff qualification” while not having certification privileges (or while exercising very limited certification privileges below his/her qualification) for different reasons such as, for example, the following:

- The person is working as “support staff” in the base maintenance environment;
- The person has been authorised only for a very limited range of tasks (lower than what he/she would be entitled if his/her qualification is considered) since the person is working in a line station where the scope of tasks is very limited;
- The person holds a licence with a wider scope than the scope of the organisation where he/she is employed;
- The person is working outside the aviation industry or is temporarily on leave due to different reasons (medical, personal, etc.).

These persons are entitled to have the conversion performed in accordance with the full scope of their qualification and the full privileges that they would be entitled to hold on the basis of such qualification.

(c) As described in point 66.70, certifying staff qualifications eligible for conversion are those valid prior to the date of entry into force of CAR 66, which means those qualifications valid before:

- 01 July 2011 for aircraft above and below 5 700 kg MTOM.

Nevertheless, since the B3 licence did not exist at those dates, certifying staff qualifications eligible for conversion to a B3 licence are those valid before 01 December 2013, which is the date when the GCAA has the obligation to start issuing such licences.

(d) Although only those certifying staff qualifications gained prior to the dates indicated above are eligible for conversion, this does not mean that the application for conversion has to be submitted prior to those dates. The applicant is entitled to have the conversion performed irrespective of when he/she applies for conversion.

(e) A certifying staff qualification can be subject to more than one conversion process and can also be converted to more than one licence (with any applicable limitations). This could be the case, for example, for a person who already had the certifying staff qualification converted to a B1.2 licence with limitations linked to some missing elements of the CAR 66 Appendix I and II standard (following 66.70(c)). This person would be entitled to apply and have his/her certifying staff qualification converted to a B1.2 or a B3 licence on the basis of 66.70(d), which would mean that there is no need to compare with the CAR 66 Appendix I and II standard, introducing only those limitations required to maintain the existing privileges.

AMC 66.70(c) - Conversion provisions

For example, a limitation could be where a person holds a pre-existing certifying staff qualification which covered, to the standard of CAR 66 Appendix I and II, all the modules/subjects corresponding to the B1 licence except for electrical power systems. This person would receive a CAR 66 Aircraft Maintenance Engineers Licence in the B1 category with a limitation (exclusion) on electrical power systems.

For removal of limitations, refer to Appendix 1 to 66.50(c).

AMC 66.70 (d) - Conversion Provisions (non UAE Licenses)

The following list identifies which ICAO licences are acceptable for conversion to a GCAA licence, the list is split into two categories.

Category 1. The following ICAO licences are acceptable for conversion to a GCAA licence following an Aviation Legislation examination conducted by or on behalf of the GCAA.

Austria, Australia, Bahrain, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hong Kong, Hungary, Iceland, Ireland, Italy, Jordan, Kuwait, Latvia, Liechtenstein, Lithuania, Luxemburg, Malaysia, Malta, New Zealand, Norway, Poland, Portugal, Qatar, Romania, Singapore, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, The Netherlands, Turkey and the United Kingdom.

Category 2. The following ICAO licences are acceptable for conversion to a GCAA licence following an Aviation Legislation examination conducted by or on behalf of the GCAA, and a Human Factors examination conducted by the GCAA or a CAR 147 approved Maintenance Training Organisation.

Algeria, Bahamas, Bangladesh, Brunei, Canada, Egypt, FAA A&P with IA, Indonesia, India, Jamaica, A&P/Part 66, Lebanon, Macau, Mauritius, Morocco, Oman, Pakistan, Saudi Arabia A&P with IA, South Africa, Sri Lanka, Sudan, Tunisia, Yemen and Ethiopia (A&C)

Category 3. The following ICAO licences are acceptable for conversion to a GCAA licence following completed GCAA approved structured validation program within recognized CAR 147 approved MTO, and an Aviation Legislation examination conducted by or on behalf of the GCAA, and a Human Factors examination conducted by the GCAA or a CAR 147 approved Maintenance Training Organisation:

Ethiopia (Avionics License)

Conversion provision for non-type rated licences:

The following licences issued by an ICAO contracting state (listed above) without a type rating and certification privileges may be eligible for conversion to a GCAA corresponding basic category A licence following completion of a GCAA Aviation Legislation exam and Human Factor exam as applicable:

- a. Basic category B1 or basic airframe/powerplant foreign licences without heavy limitations.
- b. Basic unrestricted category A license

Foreign license with limitations not defined in APPENDIX I to GM 66.50 will not be accepted.

Further extension of GCAA category A licence issued under this provision shall comply with GCAA CAR 66 knowledge and experience requirements.

Basic airframe/powerplant foreign licences issued by an ICAO contracting state (listed above) without a type rating and certification privileges may be eligible for a conversion to a GCAA category A licence following completion of a GCAA Aviation Legislation exam and Human Factor exam as applicable. Further extension of GCAA category A licence issued under the provision of this paragraph shall comply with GCAA CAR 66 knowledge and experience requirements.

Candidates applying for foreign licence conversion may be required to sit additional CAR 66 full/part modular examination that are considered necessary by the GCAA to convert the foreign licence to a non-restricted GCAA CAR 66 AMEL.

Requests for a licence conversion on the basis of a non UAE licence referred to in GM 66.70(d) with a large number of limitations or with limitations that severely restricts the corresponding CAR 66 privileges will not be accepted.

Upon successful completion of the applicable examinations referred to in GM 66.70(d) the candidate will be required to apply for issue of a CAR 66 licence through the E-Services application. Ratings held by the individual on their non UAE licence will be endorsed on the licence iaw AMC 66.45(a).

For a licence conversion from a non UAE licence, the exam retake restriction does not apply for examination conducted by, or on behalf of the GCAA, a failed modular examination may be retaken at any time, however only one re-sit attempt will be allowed, after this the applicant must attend a GCAA Aviation Legislation and/or Human Factor course at a CAR 147 approved training organisation, after which, the

complete examination must be taken MCQ and essay. Certificates required for licence conversions referred to above will be valid for a period of 12 months from the date of examination.

Applicants must hold a valid type rated Aircraft Maintenance Engineer Licence from an ICAO contracting state listed in GM 66.70(d), if the listed ICAO contracting state does not issue a type rated Aircraft Maintenance Engineer Licence, a valid basic Aircraft Maintenance Engineer Licence comparable and equivalent to the appropriate CAR 66 AMEL B1, B2, B3 or L category

Applicant must have held privileges to issue Certificate of Release to Service (CRS) under a maintenance/certification authorisation granted by a previous organisation under the oversight of the foreign license issuing authority.

The non UAE licence must be verified by the issuing authority and addressed to the GCAA, and if applicable, the maintenance/certification authorisation shall also be verified by the regulatory authority of the company that issued the maintenance authorisation to verify/attest that the authorisation issued by the company complies with ICAO Aircraft Maintenance Personal Licensing standards.

the above mentioned maintenance/certification authorisation verification is needed from applicants who hold basic licences which are issued from the ICAO contracting state that does not issue type rated Aircraft Maintenance Engineer Licences.

The applicant must furnish training course certificates related to the certification qualification.

AMC 66.70 – Conversion provisions temporary validation (non UAE Licences)

- (a) To permit a non UAE licence holder to exercise the privileges of their licence in the U.A.E. a non UAE licence can be validated by issuance of a letter of validation, with initial validity of ninety (90) days and may be further extended for another 90 days under extenuating circumstances.
- (b) The pre-requisites and eligibility criteria for the issue of a temporary validation are detailed in GM 66.70 (d) and GM 66.70 (e).

APPENDICES TO CAR 66

APPENDIX I : BASIC KNOWLEDGE REQUIREMENTS (except for category L licence)

1. Knowledge Levels - Category A, B1, B2, B3, and C Aircraft Maintenance Engineers Licence

Basic knowledge for categories A, B1 B2 and B3 are indicated by knowledge levels (1, 2 or 3) against each applicable subject. Category C applicants shall meet either the category B1 or the category B2 basic knowledge levels.

The knowledge level indicators are defined on 3 levels as follows:

LEVEL 1: A familiarisation with the principal elements of the subject.

Objectives:

- (a) The applicant should be familiar with the basic elements of the subject.
- (b) The applicant should be able to give a simple description of the whole subject, using common words and examples.
- (c) The applicant should be able to use typical terms.

LEVEL 2: A general knowledge of the theoretical and practical aspects of the subject and an ability to apply that knowledge.

Objectives:

- (a) The applicant should be able to understand the theoretical fundamentals of the subject.
- (b) The applicant should be able to give a general description of the subject using, as appropriate, typical examples.
- (c) The applicant should be able to use mathematical formulae in conjunction with physical laws describing the subject.
- (d) The applicant should be able to read and understand sketches, drawings and schematics describing the subject.
- (e) The applicant should be able to apply his knowledge in a practical manner using detailed procedures.

LEVEL 3: A detailed knowledge of the theoretical and practical aspects of the subject and a capacity to combine and apply the separate elements of knowledge in a logical and comprehensive manner.

Objectives:

- (a) The applicant should know the theory of the subject and interrelationships with other subjects.
- (b) The applicant should be able to give a detailed description of the subject using theoretical fundamentals and specific examples.

- (c) The applicant should understand and be able to use mathematical formulae related to the subject.
- (d) The applicant should be able to read, understand and prepare sketches, simple drawings and schematics describing the subject.
- (e) The applicant should be able to apply his knowledge in a practical manner using manufacturer's instructions.
- (f) The applicant should be able to interpret results from various sources and measurements and apply corrective action where appropriate.

Modularisation

Qualification on basic subjects for each Aircraft Maintenance Engineers Licence category or subcategory should be in accordance with the following matrix where applicable subjects are indicated by an 'X':

Subject modules	A or B1 aeroplane with:		A or B1 helicopter with:		B2	B3
	Turbine engine(s)	Piston engine(s)	Turbine engine(s)	Piston engine(s)	Avionics	Piston-engine non-pressurised aeroplanes 2 000 kg MTOM and below
1	X	X	X	X	X	X
2	X	X	X	X	X	X

MODULE 1. MATHEMATICS

MODULE 1. MATHEMATICS	LEVEL			
	A	B1	B2	B3
<p>1.1 Arithmetic</p> <p>Arithmetical terms and signs, methods of multiplication and division, fractions and decimals, factors and multiples, weights, measures and conversion factors, ratio and proportion, averages and percentages, areas and volumes, squares, cubes, square and cube roots.</p>	1	2	2	2
<p>1.2 Algebra</p> <p>(a) Evaluating simple algebraic expressions, addition, subtraction, multiplication and division, use of brackets, simple algebraic fractions;</p> <p>(b) Linear equations and their solutions; Indices and powers, negative and fractional indices; Binary and other applicable numbering systems; Simultaneous equations and second degree equations with one unknown; Logarithms.</p>	1	2	2	2
<p>1.3 Geometry</p> <p>(a) Simple geometrical constructions;</p> <p>(b) Graphical representation; nature and uses of graphs, graphs of equations/functions;</p> <p>(c) Simple trigonometry; trigonometrical relationships, use of tables and rectangular and polar coordinates.</p>	—	1	1	1
	2	2	2	2
	—	2	2	2

MODULE 2. PHYSICS

MODULE 2. PHYSICS	LEVEL			
	A	B1	B2	B3
<p>2.1 Matter</p> <p>Nature of matter: the chemical elements, structure of atoms, molecules; Chemical compounds; States: solid, liquid and gaseous; Changes between states.</p>	1	1	1	1
<p>2.2 Mechanics</p> <p>2.2.1 Statics</p> <p>Forces, moments and couples, representation as vectors; Centre of gravity; Elements of theory of stress, strain and elasticity: tension, compression, shear and torsion; Nature and properties of solid, fluid and gas; Pressure and buoyancy in liquids (barometers).</p>	1	2	1	1
<p>2.2.2 Kinetics</p> <p>Linear movement: uniform motion in a straight line, motion under constant acceleration (motion under gravity); Rotational movement: uniform circular motion (centrifugal/centripetal forces); Periodic motion: pendular movement; Simple theory of vibration, harmonics and resonance; Velocity ratio, mechanical advantage and efficiency.</p>	1	2	1	1
<p>2.2.3 Dynamics</p> <p>(a) Mass; Force, inertia, work, power, energy (potential, kinetic and total energy), heat, efficiency;</p> <p>(b) Momentum, conservation of momentum; Impulse; Gyroscopic principles; Friction: nature and effects, coefficient of friction (rolling resistance).</p>	1	2	1	1
<p>2.2.4 Fluid dynamics</p> <p>(a) Specific gravity and density;</p> <p>(b) Viscosity, fluid resistance, effects of streamlining; Effects of compressibility on fluids; Static, dynamic and total pressure: Bernoulli's Theorem, venturi.</p>	2	2	2	2
<p>2.3 Thermodynamics</p> <p>(a) Temperature: thermometers and temperature scales: Celsius, Fahrenheit and Kelvin; Heat definition;</p> <p>(b) Heat capacity, specific heat;</p>	1	2	2	1
<p>(a) Temperature: thermometers and temperature scales: Celsius, Fahrenheit and Kelvin; Heat definition;</p> <p>(b) Heat capacity, specific heat;</p>	2	2	2	2

Heat transfer: convection, radiation and conduction; Volumetric expansion; First and second law of thermodynamics; Gases: ideal gases laws; specific heat at constant volume and constant pressure, work done by expanding gas; Isothermal, adiabatic expansion and compression, engine cycles, constant volume and constant pressure, refrigerators and heat pumps; Latent heats of fusion and evaporation, thermal energy, heat of combustion.	—	2	2	1
2.4 Optics (Light) Nature of light; speed of light; Laws of reflection and refraction: reflection at plane surfaces, reflection by spherical mirrors, refraction, lenses; Fibre optics.	—	2	2	—
2.5 Wave Motion and Sound Wave motion: mechanical waves, sinusoidal wave motion, interference phenomena, standing waves; Sound: speed of sound, production of sound, intensity, pitch and quality, Doppler effect.	—	2	2	—

MODULE 3. ELECTRICAL FUNDAMENTALS

MODULE 3. ELECTRICAL FUNDAMENTALS	LEVEL			
	A	B1	B2	B3
<p>3.1 Electron Theory Structure and distribution of electrical charges within: atoms, molecules, ions, compounds; Molecular structure of conductors, semiconductors and insulators.</p>	1	1	1	1
<p>3.2 Static Electricity and Conduction Static electricity and distribution of electrostatic charges; Electrostatic laws of attraction and repulsion; Units of charge, Coulomb's Law; Conduction of electricity in solids, liquids, gases and a vacuum.</p>	1	2	2	1
<p>3.3 Electrical Terminology The following terms, their units and factors affecting them: potential difference, electromotive force, voltage, current, resistance, conductance, charge, conventional current flow, electron flow.</p>	1	2	2	1
<p>3.4 Generation of Electricity Production of electricity by the following methods: light, heat, friction, pressure, chemical action, magnetism and motion.</p>	1	1	1	1
<p>3.5 DC Sources of Electricity Construction and basic chemical action of: primary cells, secondary cells, lead acid cells, nickel cadmium cells, other alkaline cells; Cells connected in series and parallel; Internal resistance and its effect on a battery; Construction, materials and operation of thermocouples; Operation of photo-cells.</p>	1	2	2	2
<p>3.6 DC Circuits Ohms Law, Kirchoff's Voltage and Current Laws; Calculations using the above laws to find resistance, voltage and current; Significance of the internal resistance of a supply.</p>	—	2	2	1
<p>3.7 Resistance/Resistor (a) Resistance and affecting factors; Specific resistance; Resistor colour code, values and tolerances, preferred values, wattage ratings; Resistors in series and parallel; Calculation of total resistance using series, parallel and series parallel combinations; Operation and use of potentiometers and</p>	—	2	2	1

rheostats; Operation of Wheatstone Bridge;	—	1	1	—
(b) Positive and negative temperature coefficient conductance; Fixed resistors, stability, tolerance and limitations, methods of construction; Variable resistors, thermistors, voltage dependent resistors; Construction of potentiometers and rheostats; Construction of Wheatstone Bridge.				

MODULE 3. ELECTRICAL FUNDAMENTALS	LEVEL			
	A	B1	B2	B3
3.8 Power Power, work and energy (kinetic and potential); Dissipation of power by a resistor; Power formula; Calculations involving power, work and energy.	—	2	2	1
3.9 Capacitance/Capacitor Operation and function of a capacitor; Factors affecting capacitance area of plates, distance between plates, number of plates, dielectric and dielectric constant, working voltage, voltage rating; Capacitor types, construction and function; Capacitor colour coding; Calculations of capacitance and voltage in series and parallel circuits; Exponential charge and discharge of a capacitor, time constants; Testing of capacitors.	—	2	2	1
3.10 Magnetism (a) Theory of magnetism; Properties of a magnet; Action of a magnet suspended in the Earth's magnetic field; Magnetisation and demagnetisation; Magnetic shielding; Various types of magnetic material; Electromagnets construction and principles of operation; Hand clasp rules to determine: magnetic field around current carrying conductor;	—	2	2	1
(b) Magnetomotive force, field strength, magnetic flux density, permeability, hysteresis loop, retentivity, coercive force reluctance, saturation point, eddy currents; Precautions for care and storage of magnets.	—	2	2	1

<p>3.11 Inductance/Inductor Faraday's Law; Action of inducing a voltage in a conductor moving in a magnetic field; Induction principles; Effects of the following on the magnitude of an induced voltage: magnetic field strength, rate of change of flux, number of conductor turns; Mutual induction; The effect the rate of change of primary current and mutual inductance has on induced voltage; Factors affecting mutual inductance: number of turns in coil, physical size of coil, permeability of coil, position of coils with respect to each other; Lenz's Law and polarity determining rules; Back emf, self induction; Saturation point; Principle uses of inductors.</p>	—	2	2	1
<p>3.12 DC Motor/Generator Theory Basic motor and generator theory; Construction and purpose of components in DC generator; Operation of, and factors affecting output and direction of current flow in DC generators; Operation of, and factors affecting output power, torque, speed and direction of rotation of DC motors; Series wound, shunt wound and compound motors; Starter Generator construction.</p>	—	2	2	1
<p>3.13 AC Theory Sinusoidal waveform: phase, period, frequency, cycle; Instantaneous, average, root mean square, peak, peak to peak current values and calculations of these values, in relation to voltage, current and power; Triangular/Square waves; Single/3 phase principles.</p>	1	2	2	1
<p>3.14 Resistive (R), Capacitive (C) and Inductive (L) Circuits Phase relationship of voltage and current in L, C and R circuits, parallel, series and series parallel; Power dissipation in L, C and R circuits; Impedance, phase angle, power factor and current calculations; True power, apparent power and reactive power calculations.</p>	—	2	2	1
<p>3.15 Transformers Transformer construction principles and operation; Transformer losses and methods for overcoming them; Transformer action under load and no-load conditions; Power transfer, efficiency, polarity markings; Calculation of line and phase voltages and currents; Calculation of power in a three phase system; Primary and Secondary current, voltage, turns ratio,</p>	—	2	2	1

power, efficiency; Auto transformers.				
3.16 Filters Operation, application and uses of the following filters: low pass, high pass, band pass, band stop.	—	1	1	—
3.17 AC Generators Rotation of loop in a magnetic field and waveform produced; Operation and construction of revolving armature and revolving field type AC generators; Single phase, two phase and three phase alternators; Three phase star and delta connections advantages and uses; Permanent Magnet Generators.	—	2	2	1
3.18 AC Motors Construction, principles of operation and characteristics of: AC synchronous and induction motors both single and polyphase; Methods of speed control and direction of rotation; Methods of producing a rotating field: capacitor, inductor, shaded or split pole.	—	2	2	1

MODULE 4. ELECTRONIC FUNDAMENTALS

MODULE 4. ELECTRONIC FUNDAMENTALS	LEVEL			
	A	B1	B2	B3
4.1 Semiconductors				
4.1.1 Diodes				
(a) Diode symbols; Diode characteristics and properties; Diodes in series and parallel; Main characteristics and use of silicon controlled rectifiers (thyristors), light emitting diode, photo conductive diode, varistor, rectifier diodes; Functional testing of diodes.	—	2	2	1
(b) Materials, electron configuration, electrical properties; P and N type materials: effects of impurities on conduction, majority and minority characters; PN junction in a semiconductor, development of a potential across a PN junction in unbiased, forward biased and reverse biased conditions; Diode parameters: peak inverse voltage, maximum forward current, temperature, frequency, leakage current, power dissipation; Operation and function of diodes in the following circuits: clippers, clampers, full and half wave rectifiers, bridge rectifiers, voltage doublers and triplers; Detailed operation and characteristics of the following devices: silicon controlled rectifier (thyristor), light emitting diode, Schottky diode, photo conductive diode, varactor diode, varistor, rectifier diodes, Zener diode.	—	—	2	—
4.1.2 Transistors				
(a) Transistor symbols; Component description and orientation; Transistor characteristics and properties.	—	1	2	1
(b) Construction and operation of PNP and NPN transistors; Base, collector and emitter configurations; Testing of transistors; Basic appreciation of other transistor types and their uses; Application of transistors: classes of amplifier (A, B, C); Simple circuits including: bias, decoupling, feedback and stabilisation; Multistage circuit principles: cascades, push-pull, oscillators, multivibrators, flip-flop circuits.	—	—	2	—
4.1.3 Integrated Circuits				
(a) Description and operation of logic circuits and linear	—	1	—	1

<p>circuits/operational amplifiers;</p> <p>(b) Description and operation of logic circuits and linear circuits; Introduction to operation and function of an operational amplifier used as: integrator, differentiator, voltage follower, comparator;</p> <p>Operation and amplifier stages connecting methods: resistive capacitive, inductive (transformer), inductive resistive (IR), direct;</p> <p>Advantages and disadvantages of positive and negative feedback.</p>	—	—	2	—
<p>4.2 <i>Printed Circuit Boards</i></p> <p>Description and use of printed circuit boards.</p>	—	1	2	—
<p>4.3 <i>Servomechanisms</i></p> <p>(a) Understanding of the following terms: Open and closed loop systems, feedback, follow up, analogue transducers; Principles of operation and use of the following synchro system components/features: resolvers, differential, control and torque, transformers, inductance and capacitance transmitters;</p> <p>(b) Understanding of the following terms: Open and closed loop, follow up, servomechanism, analogue, transducer, null, damping, feedback, deadband;</p> <p>Construction operation and use of the following synchro system components: resolvers, differential, control and torque, E and I transformers, inductance transmitters, capacitance transmitters, synchronous transmitters; Servomechanism defects, reversal of synchro leads, hunting.</p>	—	1	—	—
	—	—	2	—

MODULE 5. DIGITAL TECHNIQUES/ELECTRONIC INSTRUMENT SYSTEMS

MODULE 5. DIGITAL TECHNIQUES/ELECTRONIC INSTRUMENT SYSTEMS	LEVEL				
	A	B1.1 B1.3	B1.2 B1.4	B2 B2L	B 3
<p>5.1 Electronic Instrument Systems Typical systems arrangements and cockpit layout of electronic instrument systems.</p>	1	2	2	3	1
<p>5.2 Numbering Systems Numbering systems: binary, octal and hexadecimal; Demonstration of conversions between the decimal and binary, octal and hexadecimal systems and vice versa.</p>	—	1	—	2	—
<p>5.3 Data Conversion Analogue Data, Digital Data; Operation and application of analogue to digital, and digital to analogue converters, inputs and outputs, limitations of various types.</p>	—	1	—	2	—
<p>5.4 Data Buses Operation of data buses in aircraft systems, including knowledge of ARINC and other specifications. Aircraft Network/Ethernet.</p>	—	2	—	2	—
<p>5.5 Logic Circuits (a) Identification of common logic gate symbols, tables and equivalent circuits; Applications used for aircraft systems, schematic diagrams. (b) Interpretation of logic diagrams.</p>	—	2	—	2	—
<p>5.6 Basic Computer Structure (a) Computer terminology (including bit, byte, software, hardware, CPU, IC, and various memory devices such as RAM, ROM, PROM); Computer technology (as applied in aircraft systems). (b) Computer related terminology; Operation, layout and interface of the major components in a micro computer including their associated bus systems; Information contained in single and multiaddress instruction words; Memory associated terms; Operation of typical memory devices; Operation, advantages and disadvantages of the various data storage systems.</p>	1	2	—	—	—
<p>5.7 Microprocessors Functions performed and overall operation of a microprocessor;</p>	—	—	—	2	—

Basic operation of each of the following microprocessor elements: control and processing unit, clock, register, arithmetic logic unit.					
5.8 Integrated Circuits Operation and use of encoders and decoders; Function of encoder types; Uses of medium, large and very large scale integration.	—	—	—	2	—
5.9 Multiplexing Operation, application and identification in logic diagrams of multiplexers and demultiplexers.	—	—	—	2	—
5.10 Fibre Optics Advantages and disadvantages of fibre optic data transmission over electrical wire propagation; Fibre optic data bus; Fibre optic related terms; Terminations; Couplers, control terminals, remote terminals; Application of fibre optics in aircraft systems.	—	1	1	2	—
5.11 Electronic Displays Principles of operation of common types of displays used in modern aircraft, including Cathode Ray Tubes, Light Emitting Diodes and Liquid Crystal Display.	—	2	1	2	1
5.12 Electrostatic Sensitive Devices Special handling of components sensitive to electrostatic discharges; Awareness of risks and possible damage, component and personnel anti-static protection devices.	1	2	2	2	1
5.13 Software Management Control Awareness of restrictions, airworthiness requirements and possible catastrophic effects of unapproved changes to software programmes.	—	2	1	2	1
5.14 Electromagnetic Environment Influence of the following phenomena on maintenance practices for electronic system: EMC-Electromagnetic Compatibility EMI- Electromagnetic Interference HIRF-High Intensity Radiated Field Lightning/lightning protection.	—	2	2	2	1
5.15 Typical Electronic/Digital Aircraft Systems General arrangement of typical electronic/digital aircraft systems and associated BITE (Built In Test Equipment) such as: (a) For B1 and B2 only: ACARS-ARINC Communication and Addressing and Reporting System EICAS-Engine Indication and Crew Alerting	—	2	2	2	1

<p>(b) System FBW-Fly-by-Wire FMS-Flight Management System IRS-Inertial Reference System; For B1, B2 and B3: ECAM-Electronic Centralised Aircraft Monitoring EFIS-Electronic Flight Instrument System GPS-Global Positioning System TCAS-Traffic Alert Collision Avoidance System Integrated Modular Avionics Cabin Systems Information Systems.</p>					
--	--	--	--	--	--

MODULE 6. MATERIALS AND HARDWARE

MODULE 6. MATERIALS AND HARDWARE	LEVEL			
	A	B1	B2	B3
6.1 Aircraft Materials — Ferrous				
(a) Characteristics, properties and identification of common alloy steels used in aircraft; Heat treatment and application of alloy steels.	1	2	1	2
(b) Testing of ferrous materials for hardness, tensile strength, fatigue strength and impact resistance.	—	1	1	1
6.2 Aircraft Materials — Non-Ferrous				
(a) Characteristics, properties and identification of common non-ferrous materials used in aircraft; Heat treatment and application of non-ferrous materials;	1	2	1	2
(b) Testing of non-ferrous material for hardness, tensile strength, fatigue strength and impact resistance.	—	1	1	1
6.3 Aircraft Materials — Composite and Non-Metallic				
6.3.1 Composite and non-metallic other than wood and fabric				
(a) Characteristics, properties and identification of common composite and non-metallic materials, other than wood, used in aircraft; Sealant and bonding agents;	1	2	2	2
(b) The detection of defects/deterioration in composite and non-metallic material; Repair of composite and non-metallic material.	1	2	—	2
6.3.2 Wooden structures				
Construction methods of wooden airframe structures; Characteristics, properties and types of wood and glue used in aeroplanes; Preservation and maintenance of wooden structure; Types of defects in wood material and wooden structures; The detection of defects in wooden structure; Repair of wooden structure.	1	2	—	2
6.3.3 Fabric covering				
Characteristics, properties and types of fabrics used in aeroplanes; Inspection methods for fabric; Types of defects in fabric; Repair of fabric covering.	1	2	—	2
6.4 Corrosion				
(a) Chemical fundamentals; Formation by, galvanic action process, microbiological, stress;	1	1	1	1
(b) Types of corrosion and their identification; Causes of corrosion; Material types, susceptibility to corrosion.	2	3	2	2

6.5 Fasteners				
6.5.1 Screw threads Screw nomenclature; Thread forms, dimensions and tolerances for standard threads used in aircraft; Measuring screw threads.	2	2	2	2
6.5.2 Bolts, studs and screws Bolt types: specification, identification and marking of aircraft bolts, international standards; Nuts: self locking, anchor, standard types; Machine screws: aircraft specifications; Studs: types and uses, insertion and removal; Self tapping screws, dowels.	2	2	2	2
6.5.3 Locking devices Tab and spring washers, locking plates, split pins, pal-nuts, wire locking, quick release fasteners, keys, circlips, cotter pins.	2	2	2	2
6.5.4 Aircraft rivets Types of solid and blind rivets: specifications and identification, heat treatment.	1	2	1	2
6.6 Pipes and Unions				
(a) Identification of, and types of rigid and flexible pipes and their connectors used in aircraft;	2	2	2	2
(b) Standard unions for aircraft hydraulic, fuel, oil, pneumatic and air system pipes.				
6.7 Springs Types of springs; materials; characteristics and applications.	—	2	1	1
6.8 Bearings Purpose of bearings, loads, material, construction; Types of bearings and their application.	1	2	2	1
6.9 Transmissions Gear types and their application; Gear ratios, reduction and multiplication gear systems, driven and driving gears, idler gears, mesh patterns; Belts and pulleys, chains and sprockets.	1	2	2	1
6.10 Control Cables Types of cables; End fittings, turnbuckles and compensation devices; Pulleys and cable system components; Bowden cables; Aircraft flexible control systems.	1	2	1	2
6.11 Electrical Cables and Connectors Cable types, construction and characteristics; High tension and co-axial cables; Crimping; Connector types, pins, plugs, sockets, insulators, current and voltage	1	2	2	2

rating, coupling, identification codes.

MODULE 7A. MAINTENANCE PRACTICES

Note: This module does not apply to category B3. Relevant subject matters for category B3 are defined in module 7B.

MODULE 7A. MAINTENANCE PRACTICES	LEVEL		
	A	B1	B2
<p>7.1 Safety Precautions-Aircraft and Workshop Aspects of safe working practices including precautions to take when working with electricity, gases especially oxygen, oils and chemicals. Also, instruction in the remedial action to be taken in the event of a fire or another accident with one or more of these hazards including knowledge on extinguishing agents.</p>	3	3	3
<p>7.2 Workshop Practices Care of tools, control of tools, use of workshop materials; Dimensions, allowances and tolerances, standards of workmanship; Calibration of tools and equipment, calibration standards.</p>	3	3	3
<p>7.3 Tools Common hand tool types; Common power tool types; Operation and use of precision measuring tools; Lubrication equipment and methods. Operation, function and use of electrical general test equipment.</p>	3	3	3
<p>7.4 Avionic General Test Equipment Operation, function and use of avionic general test equipment.</p>	—	2	3
<p>7.5 Engineering Drawings, Diagrams and Standards Drawing types and diagrams, their symbols, dimensions, tolerances and projections; Identifying title block information; Microfilm, microfiche and computerised presentations; Specification 100 of the Air Transport Association (ATA) of America; Aeronautical and other applicable standards including ISO, AN, MS, NAS and MIL; Wiring diagrams and schematic diagrams.</p>	1	2	2
<p>7.6 Fits and Clearances Drill sizes for bolt holes, classes of fits; Common system of fits and clearances; Schedule of fits and clearances for aircraft and engines; Limits for bow, twist and wear; Standard methods for checking shafts, bearings and other parts.</p>	1	2	1

MODULE 7A. MAINTENANCE PRACTICES	LEVEL		
	A	B1	B2
<p>7.7 Electrical Wiring Interconnection System (EWIS) Continuity, insulation and bonding techniques and testing; Use of crimp tools: hand and hydraulic operated; Testing of crimp joints; Connector pin removal and insertion; Co-axial cables: testing and installation precautions; Identification of wire types, their inspection criteria and damage tolerance. Wiring protection techniques: Cable looming and loom support, cable clamps, protective sleeving techniques including heat shrink wrapping, shielding; EWIS installations, inspection, repair, maintenance and cleanliness standards.</p>	1	3	3
<p>7.8 Riveting Riveted joints, rivet spacing and pitch; Tools used for riveting and dimpling; Inspection of riveted joints.</p>	1	2	—
<p>7.9 Pipes and Hoses Bending and belling/flaring aircraft pipes; Inspection and testing of aircraft pipes and hoses; Installation and clamping of pipes.</p>	1	2	—
<p>7.10 Springs Inspection and testing of springs.</p>	1	2	—
<p>7.11 Bearings Testing, cleaning and inspection of bearings; Lubrication requirements of bearings; Defects in bearings and their causes.</p>	1	2	—
<p>7.12 Transmissions Inspection of gears, backlash; Inspection of belts and pulleys, chains and sprockets; Inspection of screw jacks, lever devices, push-pull rod systems.</p>	1	2	—
<p>7.13 Control Cables Swaging of end fittings; Inspection and testing of control cables; Bowden cables; aircraft flexible control systems.</p>	1	2	—
<p>7.14 Material handling 7.14.1 Sheet Metal Marking out and calculation of bend allowance; Sheet metal working, including bending and forming; Inspection of sheet metal work.</p>	—	2	—
<p>7.14.2 Composite and non-metallic Bonding practices; Environmental conditions;</p>	—	2	—

Inspection methods.			
7.15 Welding, Brazing, Soldering and Bonding			
(a) Soldering methods; inspection of soldered joints.	—	2	2
(b) Welding and brazing methods; Inspection of welded and brazed joints; Bonding methods and inspection of bonded joints.	—	2	—
7.16 Aircraft Weight and Balance			
(a) Centre of Gravity/Balance limits calculation: use of relevant documents;	—	2	2
(b) Preparation of aircraft for weighing; Aircraft weighing.	—	2	—
7.17 Aircraft Handling and Storage	2	2	2
Aircraft taxiing/towing and associated safety precautions; Aircraft jacking, chocking, securing and associated safety precautions; Aircraft storage methods; Refuelling/defuelling procedures; De-icing/anti-icing procedures; Electrical, hydraulic and pneumatic ground supplies. Effects of environmental conditions on aircraft handling and operation.			
7.18 Disassembly, Inspection, Repair and Assembly Techniques			
(a) Types of defects and visual inspection techniques; Corrosion removal, assessment and re-protection;	2	3	3
(b) General repair methods, Structural Repair Manual; Ageing, fatigue and corrosion control programmes;	—	2	—
(c) Non-destructive inspection techniques including, penetrant, radiographic, eddy current, ultrasonic and boroscope methods;	—	2	1
(d) Disassembly and re-assembly techniques;	2	2	2
(e) Trouble shooting techniques.	—	2	2
7.19 Abnormal Events			
(a) Inspections following lightning strikes and HIRF penetration;	2	2	2
(b) Inspections following abnormal events such as heavy landings and flight through turbulence.	2	2	—
7.20 Maintenance Procedures	1	2	2
Maintenance planning; Modification procedures; Stores procedures; Certification/release procedures; Interface with aircraft operation; Maintenance Inspection/Quality Control/Quality Assurance; Additional maintenance procedures; Control of life limited components.			

MODULE 7B. MAINTENANCE PRACTICES

Note: The scope of this module shall reflect the technology of aeroplanes relevant to the B3 category.

MODULE 7B. MAINTENANCE PRACTICES	LEVEL
	B3
<p>7.1 Safety Precautions-Aircraft and Workshop</p> <p>Aspects of safe working practices including precautions to take when working with electricity, gases especially oxygen, oils and chemicals. Also, instruction in the remedial action to be taken in the event of a fire or another accident with one or more of these hazards including knowledge on extinguishing agents.</p>	3
<p>7.2 Workshop Practices</p> <p>Care of tools, control of tools, use of workshop materials; Dimensions, allowances and tolerances, standards of workmanship; Calibration of tools and equipment, calibration standards.</p>	3
<p>7.3 Tools</p> <p>Common hand tool types; Common power tool types; Operation and use of precision measuring tools; Lubrication equipment and methods; Operation, function and use of electrical general test equipment.</p>	3
<p>7.4 Avionic General Test Equipment</p> <p>Operation, function and use of avionic general test equipment.</p>	1
<p>7.5 Engineering Drawings, Diagrams and Standards</p> <p>Drawing types and diagrams, their symbols, dimensions, tolerances and projections; Identifying title block information; Microfilm, microfiche and computerised presentations; Specification 100 of the Air Transport Association (ATA) of America; Aeronautical and other applicable standards including ISO, AN, MS, NAS and MIL; Wiring diagrams and schematic diagrams.</p>	2
<p>7.6 Fits and Clearances</p> <p>Drill sizes for bolt holes, classes of fits; Common system of fits and clearances; Schedule of fits and clearances for aircraft and engines; Limits for bow, twist and wear; Standard methods for checking shafts, bearings and other parts.</p>	2
<p>7.7 Electrical Cables and Connectors</p> <p>Continuity, insulation and bonding techniques and testing; Use of crimp tools: hand and hydraulic operated; Testing of crimp joints; Connector pin removal and insertion; Co-axial cables: testing and installation precautions; Wiring protection techniques: Cable looming and loom support, cable clamps, protective sleeving techniques including heat shrink wrapping, shielding.</p>	2

<p>7.8 Riveting Riveted joints, rivet spacing and pitch; Tools used for riveting and dimpling; Inspection of riveted joints.</p>	2
<p>7.9 Pipes and Hoses Bending and belling/flaring aircraft pipes; Inspection and testing of aircraft pipes and hoses; Installation and clamping of pipes.</p>	2
<p>7.10 Springs Inspection and testing of springs.</p>	2
<p>7.11 Bearings Testing, cleaning and inspection of bearings; Lubrication requirements of bearings; Defects in bearings and their causes.</p>	2
<p>7.12 Transmissions Inspection of gears, backlash; Inspection of belts and pulleys, chains and sprockets; Inspection of screw jacks, lever devices, push-pull rod systems.</p>	2
<p>7.13 Control Cables Swaging of end fittings; Inspection and testing of control cables; Bowden cables; aircraft flexible control systems.</p>	2
<p>7.14 Material handling 7.14.1 Sheet Metal Marking out and calculation of bend allowance; Sheet metal working, including bending and forming; Inspection of sheet metal work.</p>	2
<p>7.14.2 Composite and non-metallic Bonding practices; Environmental conditions; Inspection methods.</p>	2
<p>7.15 Welding, Brazing, Soldering and Bonding (a) Soldering methods; inspection of soldered joints;</p>	2
<p>(b) Welding and brazing methods; Inspection of welded and brazed joints;</p>	2
<p>Bonding methods and inspection of bonded joints.</p>	
<p>7.16 Aircraft Weight and Balance (a) Centre of Gravity/Balance limits calculation: use of relevant documents;</p>	2
<p>(b) Preparation of aircraft for weighing; Aircraft weighing.</p>	2

<p>7.17 Aircraft Handling and Storage Aircraft taxiing/towing and associated safety precautions; Aircraft jacking, chocking, securing and associated safety precautions; Aircraft storage methods; Refuelling/defuelling procedures; De-icing/anti-icing procedures; Electrical, hydraulic and pneumatic ground supplies; Effects of environmental conditions on aircraft handling and operation.</p>	2
<p>7.18 Disassembly, Inspection, Repair and Assembly Techniques</p> <p>(a) Types of defects and visual inspection techniques; Corrosion removal, assessment and re-protection;</p> <p>(b) General repair methods, Structural Repair Manual; Ageing, fatigue and corrosion control programmes;</p> <p>(c) Non-destructive inspection techniques including, penetrant, radiographic, eddy current, ultrasonic and boroscope methods;</p> <p>(d) Disassembly and re-assembly techniques;</p> <p>(e) Trouble shooting techniques.</p>	3
	2
	2
	2
	2
<p>7.19 Abnormal Events</p> <p>(a) Inspections following lightning strikes and HIRF penetration.</p> <p>(b) Inspections following abnormal events such as heavy landings and flight through turbulence.</p>	2
	2
<p>7.20 Maintenance Procedures Maintenance planning; Modification procedures; Stores procedures; Certification/release procedures; Interface with aircraft operation; Maintenance Inspection/Quality Control/Quality Assurance; Additional maintenance procedures; Control of life limited components.</p>	2

MODULE 8. BASIC AERODYNAMICS

MODULE 8. BASIC AERODYNAMICS	LEVEL			
	A	B1	B2	B3
<p>8.1 Physics of the Atmosphere International Standard Atmosphere (ISA), application to aerodynamics.</p>	1	2	2	1
<p>8.2 Aerodynamics Airflow around a body; Boundary layer, laminar and turbulent flow, free stream flow, relative airflow, upwash and downwash, vortices, stagnation; The terms: camber, chord, mean aerodynamic chord, profile (parasite) drag, induced drag, centre of pressure, angle of attack, wash in and wash out, fineness ratio, wing shape and aspect ratio; Thrust, Weight, Aerodynamic Resultant; Generation of Lift and Drag: Angle of Attack, Lift coefficient, Drag coefficient, polar curve, stall; Aerofoil contamination including ice, snow, frost.</p>	1	2	2	1
<p>8.3 Theory of Flight Relationship between lift, weight, thrust and drag; Glide ratio; Steady state flights, performance; Theory of the turn; Influence of load factor: stall, flight envelope and structural limitations; Lift augmentation.</p>	1	2	2	1
<p>8.4 Flight Stability and Dynamics Longitudinal, lateral and directional stability (active and passive).</p>	1	2	2	1

MODULE 9A. HUMAN FACTORS

Note: This module does not apply to category B3. Relevant subject matters for category B3 are defined in module 9B.

MODULE 9A. HUMAN FACTORS	LEVEL		
	A	B1	B2
<p><i>9.1 General</i></p> <p>The need to take human factors into account; Incidents attributable to human factors/human error; 'Murphy's' law.</p>	1	2	2
<p><i>9.2 Human Performance and Limitations</i></p> <p>Vision; Hearing; Information processing; Attention and perception; Memory; Claustrophobia and physical access.</p>	1	2	2
<p><i>9.3 Social Psychology</i></p> <p>Responsibility: individual and group; Motivation and de-motivation; Peer pressure; 'Culture' issues; Team working; Management, supervision and leadership.</p>	1	1	1
<p><i>9.4 Factors Affecting Performance</i></p> <p>Fitness/health; Stress: domestic and work related; Time pressure and deadlines; Workload: overload and underload; Sleep and fatigue, shiftwork; Alcohol, medication, drug abuse.</p>	2	2	2
<p><i>9.5 Physical Environment</i></p> <p>Noise and fumes; Illumination; Climate and temperature; Motion and vibration; Working environment.</p>	1	1	1
<p><i>9.6 Tasks</i></p> <p>Physical work; Repetitive tasks; Visual inspection; Complex systems.</p>	1	1	1
<p><i>9.7 Communication</i></p> <p>Within and between teams; Work logging and recording; Keeping up to date, currency; Dissemination of information.</p>	2	2	2

<p>9.8 Human Error Error models and theories; Types of error in maintenance tasks; Implications of errors (i.e. accidents); Avoiding and managing errors.</p>	1	2	2
<p>9.9 Safety Management System (SMS) Safety Policy and Objectives; Safety Risk Management; Safety Assurance; Safety Promotion;</p>	2	2	2

MODULE 9B. HUMAN FACTORS

Note: The scope of this module shall reflect the less demanding environment of maintenance for B3 licence holders.

MODULE 9B. HUMAN FACTORS	LEVEL
	B3
<p><i>9.1 General</i> The need to take human factors into account; Incidents attributable to human factors/human error; 'Murphy's' law.</p>	2
<p><i>9.2 Human Performance and Limitations</i> Vision; Hearing; Information processing; Attention and perception; Memory; Claustrophobia and physical access.</p>	2
<p><i>9.3 Social Psychology</i> Responsibility: individual and group; Motivation and de-motivation; Peer pressure; 'Culture' issues; Team working; Management, supervision and leadership.</p>	1
<p><i>9.4 Factors Affecting Performance</i> Fitness/health; Stress: domestic and work related; Time pressure and deadlines; Workload: overload and underload; Sleep and fatigue, shiftwork; Alcohol, medication, drug abuse.</p>	2
<p><i>9.5 Physical Environment</i> Noise and fumes; Illumination; Climate and temperature; Motion and vibration; Working environment.</p>	1
<p><i>9.6 Tasks</i> Physical work; Repetitive tasks; Visual inspection; Complex systems.</p>	1
<p><i>9.7 Communication</i> Within and between teams; Work logging and recording; Keeping up to date, currency; Dissemination of information.</p>	2
<p><i>9.8 Human Error</i> Error models and theories; Types of error in maintenance tasks; Implications of errors (i.e. accidents); Avoiding and managing errors.</p>	2
<p><i>9.9 Safety Management System (SMS)</i> Safety Policy and Objectives;</p>	2

Safety Risk Management;
Safety Assurance;
Safety Promotion;

MODULE 10. AVIATION LEGISLATION

MODULE 10. AVIATION LEGISLATION	LEVEL			
	A	B1	B2	B3
10.1 Regulatory Framework Role of International Civil Aviation Organisation; Role of the General Civil Aviation Authority; Relationship between CAR 145, CAR 66, CAR 147 and CAR M; Relationship with other Aviation Authorities.	1	1	1	1
10.2 Certifying Staff – Maintenance Detailed understanding of CAR-66.	2	2	2	2
10.3 Approved Maintenance Organisations Detailed understanding of CAR-145 and CAR-M Subpart F.	2	2	2	2
10.4 Air operations General understanding of CAR AIR-OPS Air Operators Certificates; Operator's responsibilities, in particular regarding continuing airworthiness and maintenance; Aircraft Maintenance Programme; MEL//CDL; Documents to be carried on board; Aircraft placarding (markings).	1	1	1	1
10.5 Certification of aircraft, parts and appliances (a) General General understanding of CAR 21 and GCAA certification specifications.	—	1	1	1
	(b) Documents Certificate of Airworthiness; restricted certificates of airworthiness and permit to fly; Certificate of Registration; Noise Certificate; Weight Schedule; Radio Station Licence and Approval.	—	2	2
10.6 Continuing airworthiness Detailed understanding of CAR 21 provisions related to continuing airworthiness. Detailed understanding of CAR-M.	2	2	2	2

10.7 Applicable GCAA and International Requirements for					
(a)	Maintenance Programmes, Maintenance checks and inspections; Airworthiness Directives; Service Bulletins, manufacturers service information; Modifications and repairs; Maintenance documentation: maintenance manuals, structural repair manual, illustrated parts catalogue, etc.; Only for A to B2 licences: Master Minimum Equipment Lists, Minimum Equipment List, Dispatch Deviation Lists;	1	2	2	2
(b)	Continuing airworthiness; Minimum equipment requirements — Test flights; Only for B1 and B2 licences: ETOPS, maintenance and dispatch requirements; All Weather Operations, Category 2/3 operations.	—	1	1	1

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A1	B1.1
<p>11.1 Theory of Flight</p> <p>11.1.1. Aeroplane Aerodynamics and Flight Controls</p> <p>Operation and effect of:</p> <ul style="list-style-type: none"> – roll control: ailerons and spoilers, – pitch control: elevators, stabilators, variable incidence stabilisers and canards, – yaw control, rudder limiters; <p>Control using elevons, ruddervators;</p> <p>High lift devices, slots, slats, flaps, flaperons;</p> <p>Drag inducing devices, spoilers, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges;</p> <p>Boundary layer control using, vortex generators, stall wedges or leading edge devices;</p> <p>Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels.</p>	1	2
<p>11.1.2. High Speed Flight</p> <p>Speed of sound, subsonic flight, transonic flight, supersonic flight; Mach number, critical Mach number, compressibility buffet, shock wave, aerodynamic heating, area rule;</p> <p>Factors affecting airflow in engine intakes of high speed aircraft; Effects of sweepback on critical Mach number.</p>	1	2
<p>11.2 Airframe Structures — General Concepts</p> <p>(a) Airworthiness requirements for structural strength; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; Aircraft bonding.</p> <p>(b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.</p>	2	2
	1	2

11.3 Airframe Structures — Aeroplanes

11.3.1 Fuselage (ATA 52/53/56)

Construction and pressurisation sealing;
Wing, stabiliser, pylon and undercarriage
attachments; Seat installation and cargo loading
system;
Doors and emergency exits: construction, mechanisms, operation and
safety devices; Windows and windscreen construction and mechanisms

1

2

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A1	B1.1
11.3.2 Wings (ATA 57) Construction; Fuel storage; Landing gear, pylon, control surface and high lift/drag attachments.	1	2
11.3.3 Stabilisers (ATA 55) Construction; Control surface attachment.	1	2
11.3.4 Flight Control Surfaces (ATA 55/57) Construction and attachment; Balancing — mass and aerodynamic.	1	2
11.3.5 Nacelles/Pylons (ATA 54) Nacelles/Pylons: — Construction, — Firewalls, — Engine mounts.	1	2
11.4 Air Conditioning and Cabin Pressurisation (ATA 21)		
11.4.1 Air supply Sources of air supply including engine bleed, APU and ground cart.	1	2
11.4.2 Air Conditioning Air conditioning systems; Air cycle and vapour cycle machines; Distribution systems; Flow, temperature and humidity control system.	1	3
11.4.3 Pressurisation Pressurisation systems; Control and indication including control and safety valves; Cabin pressure controllers.	1	3
11.4.4 Safety and warning devices Protection and warning devices.	1	3
11.5 Instruments/Avionic Systems		
11.5.1 Instrument Systems (ATA 31) Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Angle of attack indication, stall warning systems; Glass cockpit; Other aircraft system indication.	1	2

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A1	B1.1
<p>11.5.2 Avionic Systems Fundamentals of system lay-outs and operation of: – Auto Flight (ATA 22), – Communications (ATA 23), – Navigation Systems (ATA 34).</p>	1	1
<p>11.6 Electrical Power (ATA 24) Batteries Installation and Operation; DC power generation; AC power generation; Emergency power generation; Voltage regulation; Power distribution; Inverters, transformers, rectifiers; Circuit protection; External/Ground power.</p>	1	3
<p>11.7 Equipment and Furnishings (ATA 25) (a) Emergency equipment requirements; Seats, harnesses and belts. (b) Cabin lay-out; Equipment lay-out; Cabin Furnishing installation; Cabin entertainment equipment; Galley installation; Cargo handling and retention equipment; Airstairs.</p>	2	2
	1	1
<p>11.8 Fire Protection (ATA 26) (a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests; (b) Portable fire extinguisher.</p>	1	3
	1	2
<p>11.9 Flight Controls (ATA 27) Primary controls: aileron, elevator, rudder, spoiler; Trim control; Active load control; High lift devices; Lift dump, speed brakes; System operation: manual, hydraulic, pneumatic, electrical, fly-by-wire; Artificial feel, Yaw damper, Mach trim, rudder limiter, gust lock systems; Balancing and rigging; Stall protection/warning system.</p>	1	3

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A1	B1.1
<p>11.10 Fuel Systems (ATA 28)</p> <p>System lay-out; Fuel tanks; Supply systems; Dumping, venting and draining; Cross-feed and transfer; Indications and warnings; Refuelling and defuelling; Longitudinal balance fuel systems.</p>	1	3
<p>11.11 Hydraulic Power (ATA 29)</p> <p>System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical, pneumatic; Emergency pressure generation; Filters; Pressure Control; Power distribution; Indication and warning systems; Interface with other systems.</p>	1	3
<p>11.12 Ice and Rain Protection (ATA 30)</p> <p>Ice formation, classification and detection; Anti-icing systems: electrical, hot air and chemical; De-icing systems: electrical, hot air, pneumatic and chemical; Rain repellent; Probe and drain heating; Wiper systems.</p>	1	3
<p>11.13 Landing Gear (ATA 32)</p> <p>Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, brakes, antiskid and autobraking; Tyres; Steering; Air-ground sensing.</p>	2	3
<p>11.14 Lights (ATA 33)</p> <p>External: navigation, anti collision, landing, taxiing, ice; Internal: cabin, cockpit, cargo; Emergency.</p>	2	3
<p>11.15 Oxygen (ATA 35)</p> <p>System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.</p>	1	3

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A1	B1.1
<p>11.16 Pneumatic/Vacuum (ATA 36) System lay-out; Sources: engine/APU (Auxiliary Power Unit), compressors, reservoirs, ground supply; Pressure and vacuum pumps; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.</p>	1	3
<p>11.17 Water/Waste (ATA 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing; Corrosion aspects.</p>	2	3
<p>11.18 On Board Maintenance Systems (ATA 45) Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).</p>	1	2
<p>11.19 Integrated Modular Avionics (ATA42) Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc. Core System; Network Components.</p>	1	2
<p>11.20 Cabin Systems (ATA44) The units and components which furnish a means of entertaining the passengers and providing communication within the aircraft (Cabin Intercommunication Data System (CIDS)) and between the aircraft cabin and ground stations (Cabin Network Service (CNS)). They include voice, data, music and video transmissions. CIDS provides an interface between cockpit/cabin crew and cabin systems. These systems support data exchange between the different related Line Replaceable Units (LRUs) and they are typically operated via Flight Attendant Panels (FAPs). CNS typically consists of a server, interfacing with, among others, the following systems: – Data/Radio Communication; – Cabin Core System (CCS); – In-flight Entertainment System (IFES); – External Communication System (ECS); – Cabin Mass Memory System (CMMS);</p>	1	2

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A1	B1.1
<ul style="list-style-type: none"> – Cabin Monitoring System (CMS); – Miscellaneous Cabin Systems (MCSs). CNS may host functions such as: <ul style="list-style-type: none"> – access to pre-departure/departure reports; – e-mail/intranet/internet access; passenger database. 	1	2
<p>11.21 Information Systems (ATA46)</p> <p>The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display.</p> <p>Typical examples include Air Traffic and Information Management Systems and Network Server Systems Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.</p>	1	2

MODULE 11B. PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

Note 1: This module does not apply to category B3. Relevant subject matters for category B3 are defined in module 11C.

Note 2: The scope of this Module shall reflect the technology of aeroplanes pertinent to the A2 and B1.2 subcategory.

MODULE 11B. PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A2	B1.2
<i>11.1 Theory of Flight</i>		
<i>11.1.1. Aeroplane Aerodynamics and Flight Controls</i> Operation and effect of: – roll control: ailerons and spoilers, – pitch control: elevators, stabilators, variable incidence stabilisers and canards, – yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons; Drag inducing devices, spoilers, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges; Boundary layer control using, vortex generators, stall wedges or leading edge devices; Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels.	1	2
<i>11.1.2. High Speed Flight — N/A</i>	—	—
<i>11.2 Airframe Structures — General Concepts</i>		
(a) Airworthiness requirements for structural strength; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; Aircraft bonding.	2	2
(b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.	1	2
<i>11.3 Airframe Structures — Aeroplanes</i>		
<i>11.3.1 Fuselage (ATA 52/53/56)</i> – Construction and pressurisation sealing; – Wing, tail-plane, pylon and undercarriage attachments; Seat installation; – Doors and emergency exits: construction and operation;	1	2

– Windows and windscreen attachment.		
11.3.2 Wings (ATA 57) – Construction; Fuel storage; – Landing gear, pylon, control surface and high lift/drag attachments.	1	2
11.3.3 Stabilisers (ATA 55) – Construction; – Control surface attachment.	1	2
11.3.4 Flight Control Surfaces (ATA 55/57) – Construction and attachment; Balancing — mass and aerodynamic.	1	2
11.3.6 Nacelles/Pylons (ATA 54) – Nacelles/Pylons: – Construction, – Firewalls, – Engine mounts.	1	2
11.4 Air Conditioning and Cabin Pressurisation (ATA 21) – Pressurisation and air conditioning systems; – Cabin pressure controllers, protection and warning devices; – Heating systems.	1	3
11.5 Instruments/Avionic Systems		
11.5.1 Instrument Systems (ATA 31) Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Angle of attack indication, stall warning systems; Glass cockpit; Other aircraft system indication.	1	2
11.5.2 Avionic Systems Fundamentals of system lay-outs and operation of: – Auto Flight (ATA 22), – Communications (ATA 23), – Navigation Systems (ATA 34).	1	1
11.6 Electrical Power (ATA 24) Batteries Installation and Operation; DC power generation; Voltage regulation; Power distribution; Circuit protection; Inverters, transformers.	1	3
11.7 Equipment and Furnishings (ATA 25) (a) Emergency equipment requirements; Seats, harnesses and belts;	2	2

(b) Cabin lay-out; Equipment lay-out; Cabin Furnishing installation; Cabin entertainment equipment; Galley installation; Cargo handling and retention equipment; Airstairs.	1	1
11.8 Fire Protection (ATA 26)		
(a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests;	1	3
(b) Portable fire extinguisher.	1	2
11.9 Flight Controls (ATA 27)	1	3
Primary controls: aileron, elevator, rudder; Trim tabs; High lift devices; System operation: manual; Gust locks; Balancing and rigging; Stall warning system.		
11.10 Fuel Systems (ATA 28)	1	3
System lay-out; Fuel tanks; Supply systems; Cross-feed and transfer; Indications and warnings; Refuelling and defuelling.		
11.11 Hydraulic Power (ATA 29) System lay-out;	1	3
Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical; Filters; Pressure Control; Power distribution; Indication and warning systems.		
11.12 Ice and Rain Protection (ATA 30)	1	3
Ice formation, classification and detection; De-icing systems: electrical, hot air, pneumatic and chemical; Probe and drain heating; Wiper systems.		

<p>11.13 Landing Gear (ATA 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, brakes, antiskid and autobraking; Tyres; Steering; Air-ground sensing.</p>	2	3
<p>11.14 Lights (ATA 33) External: navigation, anti collision, landing, taxiing, ice; Internal: cabin, cockpit, cargo; Emergency.</p>	2	3
<p>11.15 Oxygen (ATA 35) System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.</p>	1	3
<p>11.16 Pneumatic/Vacuum (ATA 36) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure and vacuum pumps; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.</p>	1	3
<p>11.17 Water/Waste (ATA 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing; Corrosion aspects.</p>	2	3

MODULE 11C. PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

Note: The scope of this module shall reflect the technology of aeroplanes pertinent to the B3 category.

MODULE 11C. PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL B3
<p>11.1 Theory of Flight Aeroplane Aerodynamics and Flight Controls Operation and effect of: – roll control: ailerons, – pitch control: elevators, stabilators, variable incidence stabilisers and canards, – yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons; Drag inducing devices, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges; Boundary layer control using, vortex generators, stall wedges or leading edge devices; Operation and effect of trim tabs, balance and anti-balance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels.</p>	1
<p>11.2 Airframe Structures — General Concepts (a) Airworthiness requirements for structural strength; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; Aircraft bonding; (b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.</p>	2 2
<p>11.3 Airframe Structures — Aeroplanes 11.3.1 Fuselage (ATA 52/53/56) Construction; Wing, tail-plane, pylon and undercarriage attachments; Seat installation; Doors and emergency exits: construction and operation; Window and windscreen attachment.</p>	1

<p>11.3.2 Wings (ATA 57) Construction; Fuel storage; Landing gear, pylon, control surface and high lift/drag attachments.</p>	1
<p>11.3.3 Stabilisers (ATA 55) Construction; Control surface attachment.</p>	1
<p>11.3.4 Flight Control Surfaces (ATA 55/57) Construction and attachment; Balancing — mass and aerodynamic.</p>	1
<p>11.3.5 Nacelles/Pylons (ATA 54) Nacelles/Pylons: — Construction, — Firewalls, — Engine mounts.</p>	1
<p>11.4 Air Conditioning (ATA 21) Heating and ventilation systems.</p>	1
<p>11.5 Instruments/Avionic Systems 11.5.1 Instrument Systems (ATA 31) Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Angle of attack indication, stall warning systems; Glass cockpit; Other aircraft system indication.</p>	1
<p>11.5.2 Avionic Systems Fundamentals of system lay-outs and operation of: — Auto Flight (ATA 22), — Communications (ATA 23), — Navigation Systems (ATA 34).</p>	1
<p>11.6 Electrical Power (ATA 24) Batteries Installation and Operation; DC power generation; Voltage regulation; Power distribution; Circuit protection; Inverters, transformers.</p>	2
<p>11.7 Equipment and Furnishings (ATA 25) Emergency equipment requirements; Seats, harnesses and belts.</p>	2
<p>11.8 Fire Protection (ATA 26) Portable fire extinguisher.</p>	2

<p>11.9 Flight Controls (ATA 27) Primary controls: aileron, elevator, rudder; Trim tabs; High lift devices; System operation: manual; Gust locks; Balancing and rigging; Stall warning system.</p>	<p>3</p>
<p>11.10 Fuel Systems (ATA 28) System lay-out; Fuel tanks; Supply systems; Cross-feed and transfer; Indications and warnings; Refuelling and defuelling.</p>	<p>2</p>
<p>11.11 Hydraulic Power (ATA 29) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical; Filters; Pressure Control; Power distribution; Indication and warning systems.</p>	<p>2</p>
<p>11.12 Ice and Rain Protection (ATA 30) Ice formation, classification and detection; De-icing systems: electrical, hot air, pneumatic and chemical; Probe and drain heating; Wiper systems.</p>	<p>1</p>
<p>11.13 Landing Gear (ATA 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, brakes, antiskid and autobraking; Tyres; Steering.</p>	<p>2</p>
<p>11.14 Lights (ATA 33) External: navigation, anti collision, landing, taxiing, ice; Internal: cabin, cockpit, cargo; Emergency.</p>	<p>2</p>

<p><i>11.15 Oxygen (ATA 35)</i> System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.</p>	2
<p><i>11.16 Pneumatic/Vacuum (ATA 36)</i> System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure and vacuum pumps Pressure control; Distribution; Indications and warnings; Interfaces with other systems.</p>	2

MODULE 12. HELICOPTER AERODYNAMICS, STRUCTURES AND SYSTEMS

MODULE 12. HELICOPTER AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A3 A4	B1.3 B1.4
<p>12.1 Theory of Flight — Rotary Wing Aerodynamics Terminology; Effects of gyroscopic precession; Torque reaction and directional control; Dissymmetry of lift, Blade tip stall; Translating tendency and its correction; Coriolis effect and compensation; Vortex ring state, power settling, overpitching; Auto-rotation; Ground effect.</p>	1	2
<p>12.2 Flight Control <i>Systems</i> Cyclic control; Collective control; Swashplate; Yaw control: Anti-Torque Control, Tail rotor, bleed air; Main Rotor Head: Design and Operation features; Blade Dampers: Function and construction; Rotor Blades: Main and tail rotor blade construction and attachment; Trim control, fixed and adjustable stabilisers; System operation: manual, hydraulic, electrical and fly-by-wire; Artificial feel; Balancing and rigging.</p>	2	3
<p>12.3 Blade Tracking and Vibration Analysis Rotor alignment; Main and tail rotor tracking; Static and dynamic balancing; Vibration types, vibration reduction methods; Ground resonance.</p>	1	3
<p>12.4 Transmission Gear boxes, main and tail rotors; Clutches, free wheel units and rotor brake; Tail rotor drive shafts, flexible couplings, bearings, vibration dampers and bearing hangers.</p>	1	3

<p>12.5 Airframe Structures</p> <p>(a) Airworthiness requirements for structural strength; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision;</p>	2	2
<p>(b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning and anti-corrosive protection. Pylon, stabiliser and undercarriage attachments; Seat installation; Doors: construction, mechanisms, operation and safety devices; Windows and windscreen construction; Fuel storage; Firewalls; Engine mounts; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning. Airframe symmetry: methods of alignment and symmetry checks.</p>	1	2
<p>12.6 Air Conditioning (ATA 21) 12.6.1 Air supply Sources of air supply including engine bleed and ground cart.</p>	1	2
<p>12.6.2 Air conditioning Air conditioning systems; Distribution systems; Flow and temperature control systems; Protection and warning devices.</p>	1	3

MODULE 12. HELICOPTER AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL	
	A3 A4	B1.3 B1.4
<p><i>12.7 Instruments/Avionic Systems</i></p> <p><i>12.7.1 Instrument Systems (ATA 31)</i></p> <p>Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Vibration indicating systems — HUMS; Glass cockpit; Other aircraft system indication.</p>	1	2
<p><i>12.7.2 Avionic Systems</i></p> <p>Fundamentals of system layouts and operation of: Auto Flight (ATA 22); Communications (ATA 23); Navigation Systems (ATA 34).</p>	1	1
<p><i>12.8 Electrical Power (ATA 24)</i></p> <p>Batteries Installation and Operation; DC power generation, AC power generation; Emergency power generation; Voltage regulation, Circuit protection. Power distribution; Inverters, transformers, rectifiers; External/Ground power.</p>	1	3
<p><i>12.9 Equipment and Furnishings (ATA 25)</i></p> <p>(a) Emergency equipment requirements; Seats, harnesses and belts; Lifting systems;</p> <p>(b) Emergency flotation systems; Cabin lay-out, cargo retention; Equipment lay-out; Cabin Furnishing Installation.</p>	2	2
<p><i>12.10 Fire Protection (ATA 26)</i></p> <p>Fire and smoke detection and warning systems; Fire extinguishing systems; System tests.</p>	1	3
<p><i>12.11 Fuel Systems (ATA 28)</i></p> <p>System layout; Fuel tanks; Supply systems; Dumping, venting and draining; Cross-feed and transfer; Indications and warnings; Refuelling and defuelling.</p>	1	3

<p>12.12 Hydraulic Power (ATA 29) System layout; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical, pneumatic; Emergency pressure generation; Filters; Pressure Control; Power distribution; Indication and warning systems; Interface with other systems.</p>	1	3
<p>12.13 Ice and Rain Protection (ATA 30) Ice formation, classification and detection; Anti-icing and De-icing systems: electrical, hot air and chemical; Rain repellent and removal; Probe and drain heating; Wiper system.</p>	1	3
<p>12.14 Landing Gear (ATA 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, Tyres, brakes; Steering; Air-ground sensing; Skids, floats.</p>	2	3
<p>12.15 Lights (ATA 33) External: navigation, landing, taxiing, ice; Internal: cabin, cockpit, cargo; Emergency.</p>	2	3
<p>12.16 Pneumatic/Vacuum (ATA 36) System layout; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure and vacuum pumps; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.</p>	1	3

<p>12.17 Integrated Modular Avionics (ATA42)</p> <p>Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc. Core System; Network Components.</p>	1	2
<p>12.18 On Board Maintenance Systems (ATA45)</p> <p>Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).</p>	1	2
<p>12.19 Information Systems (ATA46)</p> <p>The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display.</p> <p>Typical examples include Air Traffic and Information Management Systems and Network Server Systems. Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.</p>	1	2

MODULE 13. AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS

MODULE 13. AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL
	B2
13.1 Theory of Flight	
(a) <i>Aeroplane Aerodynamics and Flight Controls</i> Operation and effect of: – roll control: ailerons and spoilers; – pitch control: elevators, stabilators, variable incidence stabilisers and canards; and – yaw control: rudder limiters; Control using elevons, ruddervators; High lift devices: slots, slats, flaps; Drag inducing devices: spoilers, lift dumpers, speed brakes; and Operation and effect of trim tabs, servo tabs and control surface bias.	1
(b) <i>High Speed Flight</i> Speed of sound, subsonic flight, transonic flight, supersonic flight; Mach number, critical Mach number.	1
(c) <i>Rotary Wing Aerodynamics</i> Terminology; Operation and effect of cyclic, collective and anti-torque controls.	1
13.2 Structures — General Concepts	1
(a) Fundamentals of Structural Systems	
(b) Zonal and Station Identification Systems, Electrical bonding, Lightning strike protection provision.	2
13.3 Autoflight (ATA 22)	
(a) Fundamentals of automatic flight control including working principles and current terminology; Command signal processing; Modes of operation: roll, pitch and yaw channels; Yaw dampers; Stability Augmentation System in helicopters; Automatic trim control; Autopilot navigation aids interface;	3
(b) Autothrottle systems; Automatic landing systems: principles and categories, modes of operation, approach, glideslope, land, go-around, system monitors and failure conditions.	3

MODULE 13. AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL B2
<p>13.4 <i>Communication/Navigation (ATA 23/34)</i></p> <p>(a) Fundamentals of radio wave propagation, antennas, transmission lines, communication, receiver and transmitter; Working principles of following systems: – Very High Frequency (VHF) communication; – High Frequency (HF) communication; – Audio; – Emergency Locator Transmitters (ELTs); – Cockpit Voice Recorder (CVR); – Very High Frequency Omnidirectional Range (VOR); – Automatic Direction Finding (ADF); – Instrument Landing System (ILS); – Flight Director Systems (FDSs), Distance Measuring Equipment (DME); – Area navigation, RNAV systems; – Flight Management Systems (FMSs); – Global Positioning System (GPS), Global Navigation Satellite Systems (GNSSs); – Data Link.</p> <p>(b) – Air Traffic Control transponder, secondary surveillance radar; – Traffic Alert and Collision Avoidance System (TCAS); – Weather avoidance radar; – Radio altimeter; – Automatic Dependent Surveillance — Broadcast (ADS-B).</p> <p>(c) – Microwave Landing System (MLS); – Very Low Frequency and hyperbolic navigation (VLF/Omega); – Doppler navigation; – Inertial Navigation System (INS); – ARINC (Aircraft Radio Incorporated) communication and reporting.</p>	<p>3</p> <p>3</p> <p>3</p>
<p>13.5 <i>Electrical Power (ATA 24)</i></p> <p>Batteries installation and operation; Direct Current (DC) power generation; Alternating Current (AC) power generation; Emergency power generation; Voltage regulation; Power distribution; Inverters, transformers, rectifiers; Circuit protection; External/Ground power.</p>	<p>3</p>
<p>13.6 <i>Equipment and Furnishings (ATA 25)</i></p> <p>Electronic emergency equipment requirements; Cabin entertainment equipment.</p>	<p>3</p>

MODULE 13. AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL
	B2
13.7 <i>Flight Controls (ATA 27)</i> (a) Primary controls: aileron, elevator, rudder, spoiler; Trim control; Active load control; High lift devices; Lift dump, speed brakes; System operation: manual, hydraulic, pneumatic; Artificial feel, Yaw damper, Mach trim, rudder limiter, gust locks; Stall protection systems.	2
(b) System operation: electrical, fly-by-wire.	3
13.8 <i>Instruments (ATA 31)</i> Classification; Atmosphere; Terminology; Pressure-measuring devices and systems; Pitot-static systems; Altimeters; Vertical-speed indicators; Airspeed indicators; Machmeters; Altitude-reporting/alerting systems; Air data computers; Instrument pneumatic systems; Direct-reading pressure and temperature gauges; Temperature-indicating systems; Fuel-quantity-indicating systems; Gyroscopic principles; Artificial horizons; Slip indicators; Directional gyros; Ground Proximity Warning Systems (GPWSs); Compass systems; Flight Data Recording Systems (FDRs); Electronic Flight Instrument Systems (EFISs); Instrument warning systems including master warning systems and centralised warning panels; Stall warning systems and angle of attack-indicating systems; Vibration measurement and indication; Glass cockpit.	3
13.9 <i>Lights (ATA 33)</i> External: navigation, landing, taxiing, ice; Internal: cabin, cockpit, cargo; Emergency.	3

MODULE 13. AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL
	B2
13.10 <i>On Board Maintenance Systems (ATA 45)</i> Central maintenance computers; Data-loading system; Electronic-library system; Printing system; Structure-monitoring (damage tolerance monitoring).	3
13.11 <i>Air Conditioning and Cabin Pressurisation (ATA 21)</i>	
13.11.1. <i>Air supply</i> Sources of air supply including engine bleed, APU and ground cart;	2
13.11.2. <i>Air Conditioning</i> Air-conditioning systems;	2
Air cycle and vapour cycle machines;	3
Distribution systems;	1
Flow, temperature and humidity control system.	3
13.11.3. <i>Pressurisation</i> Pressurisation systems; Control and indication including control and safety valves; Cabin pressure controllers.	3
13.11.4. <i>Safety and warning devices</i> Protection and warning devices.	3
13.12 <i>Fire Protection (ATA 26)</i>	
(a) Fire and smoke detection and warning systems; Fire-extinguishing systems; System tests;	3
(b) Portable fire extinguisher.	1
13.13 <i>Fuel Systems (ATA 28)</i>	
System layout;	1
Fuel tanks;	1
Supply systems;	1
Dumping, venting and draining;	1
Cross feed and transfer;	2
Indications and warnings;	3
Refuelling and defuelling;	2
Longitudinal-balance fuel systems.	3

MODULE 13. AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS	LEVEL
	B2
13.14 Hydraulic Power (ATA 29) System layout; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electrical, mechanical, pneumatic; Emergency pressure generation; Filters; Pressure control; Power distribution; Indication and warning systems; Interface with other systems.	1
	1
	1
	3
	3
	1
	3
	1
	3
	3
13.15 Ice and Rain Protection (ATA 30) Ice formation, classification and detection; Anti-icing systems: electrical, hot-air and chemical; De-icing systems: electrical, hot-air, pneumatic, chemical; Rain-repellent; Probe and drain-heating; Wiper systems.	2
	2
	3
	1
	3
	1
13.16 Landing Gear (ATA 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warnings; Wheels, brakes, antiskid and automatic braking systems; Tyres; Steering; Air-ground sensing.	1
	3
	3
	3
	1
	3
	3
	3
13.17 Oxygen (ATA 35) System layout: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.	3
	3
	3
	3
13.18 Pneumatic/Vacuum (ATA 36) System layout; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.	2
	2
	3
	1
	3
	3
13.19 Water/Waste (ATA 38) Water system layout, supply, distribution, servicing and draining; Toilet system layout, flushing and servicing.	2

<p>13.20 Integrated Modular Avionics (ATA 42)</p> <p>Core system; Network components. <i>Note: Functions that may be typically integrated into the IMA modules are among others:</i></p> <ul style="list-style-type: none"> – bleed management; – air pressure control; – air ventilation and control; – avionics and cockpit ventilation control, temperature control; – air traffic communication; – avionics communication router; – electrical load management; – circuit breaker monitoring; – electrical system Built-In Test Equipment (BITE); – fuel management; – braking control; – steering control; – landing gear extension and retraction; – tyre pressure indication; – oleo pressure indication; – brake temperature monitoring. 	3
<p>13.21 Cabin Systems (ATA 44)</p> <p>The units and components which furnish a means of entertaining the passengers and providing communication within the aircraft (Cabin Intercommunication Data System (CIDS)) and between the aircraft cabin and ground stations (Cabin Network Service (CNS)). They include voice, data, music and video transmissions.</p> <p>CIDS provides an interface between cockpit/cabin crew and cabin systems. These systems support data exchange between the different related Line Replaceable Units (LRUs) and they are typically operated via Flight Attendant Panels (FAPs). CNS typically consists of a server, interfacing with, among others, the following systems:</p> <ul style="list-style-type: none"> – Data/Radio Communication; – Cabin Core System (CCS); – In-flight Entertainment System (IFES); – External Communication System (ECS); – Cabin Mass Memory System (CMMS); – Cabin Monitoring System (CMS); – Miscellaneous Cabin Systems (MCSs). <p>CNS may host functions such as:</p> <ul style="list-style-type: none"> – access to pre-departure/departure reports; – e-mail/intranet/internet access; – passenger database. 	3
<p>MODULE 13. AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS</p>	<p>LEVEL B2</p>

13.22 Information Systems (ATA 46)

3

The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. They include units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller, but they do not include units or components installed for other uses and shared with other systems, such as flight deck printer or general-use display.

Typical examples include:

- Air Traffic and Information Management systems and Network Server systems.
- Aircraft general information system;
- Flight deck information system;
- Maintenance information system;
- Passenger cabin information system;
- Miscellaneous information systems.

MODULE 14. PROPULSION

MODULE 14. PROPULSION	LEVEL
	B2
<i>14.1 Turbine Engines</i>	
(a) Constructional arrangement and operation of turbojet, turbofan, turboshaft and turbopropeller engines;	1
(b) Electronic Engine control and fuel metering systems (FADEC).	2
<i>14.2 Engine Indicating Systems</i>	2
Exhaust gas temperature/Interstage turbine temperature systems; Engine speed; Engine Thrust Indication: Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; Oil pressure and temperature; Fuel pressure, temperature and flow; Manifold pressure; Engine torque; Propeller speed.	
<i>14.3 Starting and Ignition Systems</i>	2
Operation of engine start systems and components; Ignition systems and components; Maintenance safety requirements.	

MODULE 15. GAS TURBINE ENGINE

MODULE 15. GAS TURBINE ENGINE	LEVEL	
	A	B1
<p>15.1 Fundamentals</p> <p>Potential energy, kinetic energy, Newton's laws of motion, Brayton cycle; The relationship between force, work, power, energy, velocity, acceleration; Constructional arrangement and operation of turbojet, turbofan, turboshaft, turboprop.</p>	1	2
<p>15.2 Engine Performance</p> <p>Gross thrust, net thrust, choked nozzle thrust, thrust distribution, resultant thrust, thrust horsepower, equivalent shaft horsepower, specific fuel consumption; Engine efficiencies; By-pass ratio and engine pressure ratio; Pressure, temperature and velocity of the gas flow; Engine ratings, static thrust, influence of speed, altitude and hot climate, flat rating, limitations.</p>	—	2
<p>15.3 Inlet</p> <p>Compressor inlet ducts Effects of various inlet configurations; Ice protection.</p>	2	2
<p>15.4 Compressors</p> <p>Axial and centrifugal types; Constructional features and operating principles and applications; Fan balancing; Operation: Causes and effects of compressor stall and surge; Methods of air flow control: bleed valves, variable inlet guide vanes, variable stator vanes, rotating stator blades; Compressor ratio.</p>	1	2
<p>15.5 Combustion Section</p> <p>Constructional features and principles of operation.</p>	1	2
<p>15.6 Turbine Section</p> <p>Operation and characteristics of different turbine blade types; Blade to disk attachment; Nozzle guide vanes; Causes and effects of turbine blade stress and creep.</p>	2	2
<p>15.7 Exhaust</p> <p>Constructional features and principles of operation; Convergent, divergent and variable area nozzles; Engine noise reduction; Thrust reversers.</p>	1	2
<p>15.8 Bearings and Seals</p> <p>Constructional features and principles of operation.</p>	—	2

15.9 <i>Lubricants and Fuels</i> Properties and specifications; Fuel additives; Safety precautions.	1	2
15.10 <i>Lubrication Systems</i> System operation/lay-out and components.	1	2
15.11 <i>Fuel Systems</i> Operation of engine control and fuel metering systems including electronic engine control (FADEC); Systems lay-out and components.	1	2
15.12 <i>Air Systems</i> Operation of engine air distribution and anti-ice control systems, including internal cooling, sealing and external air services.	1	2
15.13 <i>Starting and Ignition Systems</i> Operation of engine start systems and components; Ignition systems and components; Maintenance safety requirements.	1	2
15.14 <i>Engine Indication Systems</i> Exhaust Gas Temperature/Interstage Turbine Temperature; Engine Thrust Indication: Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; Oil pressure and temperature; Fuel pressure and flow; Engine speed; Vibration measurement and indication; Torque; Power.	1	2
15.15 <i>Power Augmentation Systems</i> Operation and applications; Water injection, water methanol; Afterburner systems.	—	1
15.16 <i>Turbo-prop Engines</i> Gas coupled/free turbine and gear coupled turbines; Reduction gears; Integrated engine and propeller controls; Overspeed safety devices.	1	2
15.17 <i>Turbo-shaft Engines</i> Arrangements, drive systems, reduction gearing, couplings, control systems.	1	2
15.18 <i>Auxiliary Power Units (APUs)</i> Purpose, operation, protective systems.	1	2
15.19 <i>Powerplant Installation</i> Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.	1	2

<p>15.20 Fire Protection Systems Operation of detection and extinguishing systems.</p>	1	2
<p>15.21 Engine Monitoring and Ground Operation Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Trend (including oil analysis, vibration and boroscope) monitoring; Inspection of engine and components to criteria, tolerances and data specified by engine manufacturer; Compressor washing/cleaning; Foreign Object Damage.</p>	1	3
<p>15.22 Engine Storage and Preservation Preservation and depreservation for the engine and accessories/systems.</p>	—	2

MODULE 16. PISTON ENGINE

MODULE 16. PISTON ENGINE	LEVEL		
	A	B1	B3
<p>16.1 Fundamentals Mechanical, thermal and volumetric efficiencies; Operating principles — 2 stroke, 4 stroke, Otto and Diesel; Piston displacement and compression ratio; Engine configuration and firing order.</p>	1	2	2
<p>16.2 Engine Performance Power calculation and measurement; Factors affecting engine power; Mixtures/leaning, pre-ignition.</p>	1	2	2
<p>16.3 Engine Construction Crank case, crank shaft, cam shafts, sumps; Accessory gearbox; Cylinder and piston assemblies; Connecting rods, inlet and exhaust manifolds; Valve mechanisms; Propeller reduction gearboxes.</p>	1	2	2
<p>16.4 Engine Fuel Systems</p> <p>16.4.1 Carburettors Types, construction and principles of operation; Icing and heating.</p>	1	2	2
<p>16.4.2 Fuel injection systems Types, construction and principles of operation.</p>	1	2	2
<p>16.4.3 Electronic engine control Operation of engine control and fuel metering systems including electronic engine control (FADEC); Systems lay-out and components.</p>	1	2	2
<p>16.5 Starting and Ignition Systems Starting systems, pre-heat systems; Magneto types, construction and principles of operation; Ignition harnesses, spark plugs; Low and high tension systems.</p>	1	2	2
<p>16.6 Induction, Exhaust and Cooling Systems Construction and operation of: induction systems including alternate air systems; Exhaust systems, engine cooling systems — air and liquid.</p>	1	2	2
<p>16.7 Supercharging/Turbocharging Principles and purpose of supercharging and its effects on engine parameters; Construction and operation of supercharging/turbocharging systems; System terminology; Control systems; System protection.</p>	1	2	2

<p>16.8 Lubricants and Fuels Properties and specifications; Fuel additives; Safety precautions.</p>	1	2	2
<p>16.9 Lubrication Systems System operation/lay-out and components.</p>	1	2	2
<p>16.10 Engine Indication Systems Engine speed; Cylinder head temperature; Coolant temperature; Oil pressure and temperature; Exhaust Gas Temperature; Fuel pressure and flow; Manifold pressure.</p>	1	2	2
<p>16.11 Powerplant Installation Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti- vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.</p>	1	2	2
<p>16.12 Engine Monitoring and Ground Operation Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Inspection of engine and components: criteria, tolerances, and data specified by engine manufacturer.</p>	1	3	2
<p>16.13 Engine Storage and Preservation Preservation and depreservation for the engine and accessories/systems.</p>	—	2	1

MODULE 17A. PROPELLER

Note: This module does not apply to category B3. Relevant subject matters for category B3 are defined in module 17B.

MODULE 17A. PROPELLER	LEVEL	
	A	B1
<p><i>17.1 Fundamentals</i></p> <p>Blade element theory; High/low blade angle, reverse angle, angle of attack, rotational speed; Propeller slip; Aerodynamic, centrifugal, and thrust forces; Torque; Relative airflow on blade angle of attack; Vibration and resonance.</p>	1	2
<p><i>17.2 Propeller Construction</i></p> <p>Construction methods and materials used in wooden, composite and metal propellers; Blade station, blade face, blade shank, blade back and hub assembly; Fixed pitch, controllable pitch, constant speed propeller; Propeller/spinner installation.</p>	1	2
<p><i>17.3 Propeller Pitch Control</i></p> <p>Speed control and pitch change methods, mechanical and electrical/electronic; Feathering and reverse pitch; Overspeed protection.</p>	1	2

MODULE 17B. PROPELLER

Note: The scope of this Module shall reflect the propeller technology of aeroplanes pertinent to the B3 category.

MODULE 17B. PROPELLER	LEVEL
	B3
17.1 Fundamentals Blade element theory; High/low blade angle, reverse angle, angle of attack, rotational speed; Propeller slip; Aerodynamic, centrifugal, and thrust forces; Torque; Relative airflow on blade angle of attack; Vibration and resonance.	2
17.2 Propeller Construction Construction methods and material used in wooden, composite and metal propellers; Blade station, blade face, blade shank, blade back and hub assembly; Fixed pitch, controllable pitch, constant speeding propeller; Propeller/spinner installation.	2
17.3 Propeller Pitch Control Speed control and pitch change methods, mechanical and electrical/electronic; Feathering and reverse pitch; Over speed protection.	2
17.4 Propeller Synchronising Synchronising and synchrophasing equipment.	2
17.5 Propeller Ice Protection Fluid and electrical de-icing equipment.	2
17.6 Propeller Maintenance Static and dynamic balancing; Blade tracking; Assessment of blade damage, erosion, corrosion, impact damage, delamination; Propeller treatment/repair schemes; Propeller engine running.	2
17.7 Propeller Storage and Preservation Propeller preservation and depreservation.	2

APPENDIX II : BASIC EXAMINATION STANDARD

1. General

- 1.1. All basic examinations must be carried out using the multi-choice question format and essay questions as specified below. The incorrect alternatives shall seem equally plausible to anyone ignorant of the subject. All of the alternatives shall be clearly related to the question and of similar vocabulary, grammatical construction and length. In numerical questions, the incorrect answers shall correspond to procedural errors such as corrections applied in the wrong sense or incorrect unit conversions: they shall not be mere random numbers. The use of calculators or other electronic devices will not be allowed during the examination. Questions must be rotated on a regular basis to maintain the integrity of the question bank.
- 1.2. Each multi-choice question must have three alternative answers of which only one must be the correct answer and the candidate must be allowed a time per module which is based upon a nominal average of 75 seconds per question.

If any of the modular examinations consists of 120 questions or more, the examinations may be split into two examinations or if conducted as part of the full training course may be carried out in phases provided a procedure is established in the MTOE and approved by the GCAA.
- 1.3. Each essay question requires the preparation of a hand written answer and the candidate must be allowed 20 minutes to answer each such question.
- 1.4. Suitable essay questions must be drafted and evaluated using the knowledge syllabus in Appendix I for Modules 7A, 7B, 9A, 9B and 10.
- 1.5. Each question will have a model answer drafted for it, which will also include any known alternative answers that may be relevant for other subdivisions.
- 1.6. The model answer will also be broken down into a list of the important points known as Key Points.
- 1.7. The pass mark for each module and sub-module multi-choice part of the examination is 75 %.
- 1.8. The pass mark for each essay question is 75 % in that the candidates answer must contain 75 % of the required key points addressed by the question and no significant error related to any required key point.
- 1.9. If either the multi-choice part only or the essay part only is failed, then it is only necessary to retake the multi-choice or essay part, as appropriate. If one of the essay questions is failed in module 7, then both essay questions must be retaken. Both the essay paper and MCQ for the same module must be completed if either have been failed following three consecutive attempts (see 1.13) and both must be completed at the same examination location.
- 1.10. Penalty marking systems must not be used to determine whether a candidate has passed.
- 1.11. A failed module may not be retaken for at least 90 days following the date of the failed module examination, except in the case of a CAR 147 approved maintenance training organisation which conducts a course of retraining tailored to the failed subjects in the particular module when the failed module may be retaken after 30 days.
- 1.12. The time periods required by point 66.25 apply to each individual module examination, with the exception of those module examinations which were passed as part of another category licence, where the licence has already been issued.
- 1.13. The maximum number of consecutive attempts for each module is three. Further sets of three attempts are allowed with a 1 year waiting period between sets. (see 1.9).

1.14. If the candidate is attending a full B1,B2 or B3 CAR 147 approved training course, and has failed the examinations after three consecutive attempts, the candidate will be allowed one further attempt following training on the failed module in full. If applicable both the essay paper and MCQ for the same module must be completed if either have been failed. If this further attempt is failed, further sets of three attempts will only be allowed following a 1 year waiting period. Organisations adopting this policy must have this process approved in the MTOE.

1.15. The applicant shall confirm in writing to the approved maintenance training organisation or the GCAA to which they apply for an examination, the number and dates of attempts during the last year and the organisation where these attempts took place. The maintenance training organisation or the GCAA is responsible for checking the number of attempts within the applicable timeframes.

Any false declaration made by the candidate will result in the cancellation of any examinations taken and may lead to enforcement action(s).

2. Number of questions per module

2.1. Module 1- Mathematics:

Category A; 16 multi-choice and 0 essay questions. Time allowed 20 minutes.

Category B1; 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B2; 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B3: 28 multi-choice and 0 essay questions. Time allowed 35 minutes.

2.2. Module 2- Physics:

Category A; 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B1; 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B2; 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B3: 28 multi-choice and 0 essay questions. Time allowed 35 minutes.

2.3. Module 3- Electrical Fundamentals:

Category A; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1; 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B2; 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B3: 24 multi-choice and 0 essay questions. Time allowed 30 minutes.

2.4. Module 4- Electronic Fundamentals:

Category B1; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2; 40 multi-choice and 0 essay questions. Time allowed 50 minutes.

Category B3; 8 multi-choice and 0 essay questions. Time allowed 10 minutes.

2.5. Module 5- Digital Techniques/Electronic Instrument Systems:

Category A; 16 multi-choice and 0 essay questions. Time allowed 20 minutes.

Category B1.1 & B1.3; 40 multi-choice and 0 essay questions. Time allowed 50 minutes.

Category B1.2 & B1.4; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2; 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B3; 16 multi-choice and 0 essay questions. Time allowed 20 minutes.

2.6. Module 6- Materials and Hardware:

Category A; 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B1; 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B2; 60 multi-choice and 0 essay questions. Time allowed 75 minutes.

Category B3; 60 multi-choice and 0 essay questions. Time allowed 75 minutes.

2.7. Module 7A- Maintenance Practices:

Category A; 72 multi-choice and 2 essay questions. Time allowed 90 minutes plus 40 minutes.

Category B1; 80 multi-choice and 2 essay questions. Time allowed 100 minutes plus 40 minutes.

Category B2; 60 multi-choice and 2 essay questions. Time allowed 75 minutes plus 40 minutes

Module 7B- Maintenance Practices:

Category B3; 60 multi-choice and 2 essay questions. Time allowed 75 minutes plus 40 minutes.

2.8. Module 8- Basic Aerodynamics:

Category A; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B3; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

2.9. Subject Module 9A Human factors:

Category A; -20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B1; 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B2; 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Module 9B Human factors:

Category B3: 16 multi-choice and 1 essay questions. Time allowed 20 minutes plus 20 minutes.

2.10. Module 10- Aviation Legislation:

Category A; 32 multi-choice and 1 essay question. Time allowed 40 minutes plus 20 minutes.

Category B1; 40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.

Category B2; 40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.

Category B3: 32 multi-choice and 1 essay questions. Time allowed 40 minutes plus 20 minutes.

2.11. Module 11A- Turbine Aeroplane Aerodynamics, Structures and Systems:

Category A; 108 multi-choice and 0 essay questions. Time allowed 135 minutes.

Category B1; 140 multi-choice and 0 essay questions. Time allowed 175 minutes.

Module 11B- Piston Aeroplane Aerodynamics, Structures and Systems:

Category A; 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B1; 100 multi-choice and 0 essay questions. Time allowed 125 minutes.

Module 11C- Piston Aeroplane Aerodynamics, Structures and Systems:

Category B3: 60 multi-choice and 0 essay questions. Time allowed 75 minutes.

2.12. Module 12-Helicopter Aerodynamics, Structures and Systems:

Category A; 100 multi-choice and 0 essay questions. Time allowed 125 minutes.

Category B1; 128 multi-choice and 0 essay questions. Time allowed 160 minutes.

2.13. Module 13- Aircraft Aerodynamics, Structures and Systems:

Category B2; 180 multi-choice and 0 essay questions. Time allowed 225 minutes.

2.14. Module 14 Propulsion:

Category B2; 24 multi-choice and 0 essay questions. Time allowed 30 minutes.

2.16. Module 15 Gas Turbine Engine:

Category A-60 multi-choice and 0 essay questions. Time allowed 75 minutes.

Category B1-92 multi-choice and 0 essay questions. Time allowed 115 minutes.

2.17. Module 16 Piston Engine:

Category A; 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B1; 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B3: 68 multi-choice and 0 essay questions. Time allowed 85 minutes.

2.18. Module 17A Propeller:

Category A; 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1; 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Module 17B Propeller:

Category B3: 28 multi-choice and 0 essay questions. Time allowed 35 minutes.

APPENDIX III : AIRCRAFT TYPE TRAINING AND EXAMINATION STANDARD – ON THE JOB EXPERIENCE

1. General

Aircraft type training shall consist of theoretical training and examination, and, except for the category C ratings, practical training and assessment.

(a) Theoretical training and examination shall comply with the following requirements:

- (i) Shall be conducted by a maintenance training organisation appropriately approved in accordance with CAR 147 or, when conducted by other organisations, as directly approved by the GCAA. This includes courses conducted by the OEM.
- (ii) Shall comply with the standard described in paragraph 3.1 and 4 of this Appendix III, except as permitted by the differences training described below.
- (iii) In the case of a category C person qualified by holding an academic degree as specified in point 66.30(a)(5), the first relevant aircraft type theoretical training shall be at the category B1 or B2 level.
- (iv) Shall have been started and completed within the 3 years preceding the application for a type rating endorsement. If the application exceeds the 3 year limit, the GCAA may consider an application if further training and examination is carried out, however the application will not be accepted if it exceeds 5 years.
- (v) Courses that are not CAR 147 approved must be directly approved by the GCAA as defined in par (a) (i) above. The application for the approval of these courses must be made not less than 30 days prior to the start of the course, and the course approval document must accompany the type rating application. Courses will only be approved if the training is not available from a GCAA approved MTO.

(b) Practical training and assessment shall comply with the following requirements:

- (i) Shall be conducted by a maintenance training organisation appropriately approved in accordance with CAR 147 or, when conducted by other organisations, as directly approved by the GCAA. This includes courses conducted by the OEM.
- (ii) Shall comply with the standard described in paragraph 3.2 and 4 of this Appendix III, except as permitted by the differences training described below.
- (iii) Shall include a representative cross section of maintenance activities relevant to the aircraft type.
- (iv) Shall include demonstrations using equipment, components, simulators, other training devices or aircraft.

- (v) Shall have been started and completed within the 3 years preceding the application for a type rating endorsement.
 - (vi) Courses that are not CAR 147 approved must be directly approved by the GCAA as defined in para (b) (i) above. The application for the approval of these courses must be made not less than 30 days prior to the start of the course, and the course approval document must accompany the type rating application. Courses will only be approved if the training is not available from a GCAA approved MTO.
- (c) Differences training
- (i) Differences training is the training required in order to cover the differences between two different aircraft type ratings of the same manufacturer as determined by the GCAA.
 - (ii) Differences' training has to be defined on a case-to-case basis taking into account the requirements contained in this Appendix III in respect of both theoretical and practical elements of type rating training.
 - (iii) A type rating shall only be endorsed on a licence after differences training when the applicant also complies with one of the following conditions:
 - having already endorsed on the licence the aircraft type rating from which the differences are being identified or
 - having completed the type training requirements for the aircraft from which the differences are being identified.

2. Aircraft type training levels

The three levels listed below define the objectives, the depth of training and the level of knowledge that the training is intended to achieve.

- ***Level 1: A brief overview of the airframe, systems and powerplant as outlined in the Systems Description Section of the Aircraft Maintenance Manual/Instructions for Continued Airworthiness.***

Course objectives: Upon completion of Level 1 training, the student will be able to:

- (a) provide a simple description of the whole subject, using common words and examples, using typical terms and identify safety precautions related to the airframe, its systems and powerplant;
- (b) identify aircraft manuals, maintenance practices important to the airframe, its systems and powerplant;
- (c) define the general layout of the aircraft's major systems;

- (d) define the general layout and characteristics of the powerplant;
 - (e) identify special tooling and test equipment used with the aircraft.
- **Level 2: Basic system overview of controls, indicators, principal components, including their location and purpose, servicing and minor troubleshooting. General knowledge of the theoretical and practical aspects of the subject.**

Course objectives: In addition to the information contained in the Level 1 training, at the completion of Level 2 training, the student will be able to:

- (a) understand the theoretical fundamentals; apply knowledge in a practical manner using detailed procedures;
 - (b) recall the safety precautions to be observed when working on or near the aircraft, powerplant and systems;
 - (c) describe systems and aircraft handling particularly access, power availability and sources;
 - (d) identify the locations of the principal components;
 - (e) explain the normal functioning of each major system, including terminology and nomenclature;
 - (f) perform the procedures for servicing associated with the aircraft for the following systems: Fuel, Power Plants, Hydraulics, Landing Gear, Water/Waste, and Oxygen;
 - (g) demonstrate proficiency in use of crew reports and on-board reporting systems (minor troubleshooting) and determine aircraft airworthiness per the MEL/CDL;
 - (h) demonstrate the use, interpretation and application of appropriate documentation including instructions for continued airworthiness, maintenance manual, illustrated parts catalogue, etc.
- **Level 3: Detailed description, operation, component location, removal/installation and bite and troubleshooting procedures to maintenance manual level.**

Course objectives: In addition to the information contained in Level 1 and Level 2 training, at the completion of Level 3 training, the student will be able to:

- (a) demonstrate a theoretical knowledge of aircraft systems and structures and interrelationships with other systems, provide a detailed description of the subject using theoretical fundamentals and specific examples and to interpret results from various sources and measurements and apply corrective action where appropriate;
- (b) perform system, powerplant, component and functional checks as specified in the aircraft maintenance manual;
- (c) demonstrate the use, interpret and apply appropriate documentation including structural repair manual, troubleshooting manual, etc.;

- (d) correlate information for the purpose of making decisions in respect of fault diagnosis and rectification to maintenance manual level;
- (e) describe procedures for replacement of components unique to aircraft type.

3. Aircraft type training standard

Although aircraft type training includes both theoretical and practical elements, courses can be approved for the theoretical element, the practical element or for a combination of both.

3.1. Theoretical element

(a) Objective:

On completion of a theoretical training course the student shall be able to demonstrate, to the levels identified in the Appendix III syllabus, the detailed theoretical knowledge of the aircraft's applicable systems, structure, operations, maintenance, repair, and troubleshooting according to approved maintenance data. The student shall be able to demonstrate the use of manuals and approved procedures, including the knowledge of relevant inspections and limitations.

(b) Level of training:

Training levels are those levels defined in point 2 above.

After the first type course for category C certifying staff all subsequent courses need only be to level 1.

During a level 3 theoretical training, level 1 and 2 training material may be used to teach the full scope of the chapter if required. However, during the training the majority of the course material and training time shall be at the higher level.

(c) Duration:

The theoretical training minimum tuition hours are contained in the following table:

Category	Hours
<i>Aeroplanes with a maximum take-off mass above 30 000kg;</i>	
B1.1	150
B1.2	120
B2	100
C	30
<i>Aeroplanes with a maximum take-off mass equal or less than 30 000kg and above 5 700kg</i>	
B1.1	120
B1.2	100
B2	100
C	25
<i>Aeroplanes with a maximum take-off mass of 5 700kg and below (*)</i>	
B1.1	80
B1.2	60
B2	60
C	15
<i>Helicopters (**)</i>	
B1.3	120
B1.4	100
B2	100
C	25
(*) For non pressurised piston engine aeroplanes below 2000kg MTOM the minimum duration can be reduced by 50%	
(**) For helicopters in group 2 the minimum duration can be reduced by 30%	

For the purpose of the table above, a tuition hour means 60 minutes of teaching and excludes any breaks, examination, revision, preparation and aircraft visit.

These hours apply only to theoretical courses for complete aircraft/engine combinations according to the type rating as defined by the GCAA.

(d) Justification of course duration:

Training courses carried out in a maintenance training organisation approved in accordance with CAR 147 and courses directly approved by the GCAA shall justify their hour duration and the coverage of the full syllabus by a training needs analysis based on:

- the design of the aircraft type, its maintenance needs and the types of operation,
- detailed analysis of applicable chapters — see contents table in point 3.1(e) below,
- detailed competency analysis showing that the objectives as stated in point 3.1(a) above are fully met.

Where the training needs analysis shows that more hours are needed, course lengths shall be longer than the minimum specified in the table.

Similarly, tuition hours of differences courses or other training course combinations (such as combined B1/B2 courses), and in cases of theoretical type training courses below the figures given in point 3.1(c) above, these shall be justified to the GCAA by the training needs analysis as described above.

In addition, the course must describe and justify the following:

- The minimum attendance required to the trainee, in order to meet the objectives of the course.
- The maximum number of hours of training per day, taking into account pedagogical and human factors principles.

If the minimum attendance required is not met, the certificate of recognition shall not be issued. Additional training may be provided by the training organisation in order to meet the minimum attendance time.

(e) Content:

As a minimum, the elements in the syllabus below that are specific to the aircraft type shall be covered. Additional elements introduced due to type variations, technological changes, etc. shall also be included.

The training syllabus shall be focused on mechanical and electrical aspects for B1 personnel, and electrical and avionic aspects for B2.

- (f) Multimedia Based Training (MBT) methods may be used to satisfy the theoretical training element either in the classroom or in a virtual controlled environment subject to the acceptance of the GCAA.

3.2 Practical element

- (a) Objective:

The objective of practical training is to gain the required competence in performing safe maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks as appropriate for the type of aircraft, for example troubleshooting, repairs, adjustments, replacements, rigging and functional checks. It includes the awareness of the use of all technical literature and documentation for the aircraft, the use of specialist/special tooling and test equipment for performing removal and replacement of components and modules unique to type, including any on-wing maintenance activity.

- (b) Content:

At least 50 % of the crossed items in the table below, which are relevant to the particular aircraft type, shall be completed as part of the practical training.

Tasks crossed represent subjects that are important for practical training purposes to ensure that the operation, function, installation and safety significance of key maintenance tasks is adequately addressed; particularly where these cannot be fully explained by theoretical training alone. Although the list details the minimum practical training subjects, other items may be added where applicable to the particular aircraft type.

Tasks to be completed shall be representative of the aircraft and systems both in complexity and in the technical input required to complete that task. While relatively simple tasks may be included, other more complex tasks shall also be incorporated and undertaken as appropriate to the aircraft type.

Glossary of the table: LOC: Location; FOT: Functional/Operational Test; SGH: Service and Ground Handling; R/I: Removal/Installation; MEL: Minimum Equipment List; TS: TroubleShooting.

4. Type training examination and assessment standard

4.1 Theoretical element examination standard

After the theoretical portion of the aircraft type training has been completed, a written examination shall be performed, which shall comply with the following:

- (a) Format of the examination is of the multiple-choice type. Each multiple-choice question must have 3 alternative answers of which only one must be the correct answer. The total time is based on the total number of questions and the time for answering is based upon a nominal average of 90 seconds per question.
- (b) The incorrect alternatives shall seem equally plausible to anyone ignorant of the subject. All the alternatives shall be clearly related to the question and of similar vocabulary, grammatical construction and length.
- (c) In numerical questions, the incorrect answers shall correspond to procedural errors such as the use of incorrect sense (+ versus -) or incorrect measurement units. They shall not be mere random numbers.
- (d) The level of examination for each chapter (*) shall be the one defined in point 2 "Aircraft type training levels". However, the use of a limited number of questions at a lower level is acceptable.
- (e) The examination shall be of the closed book type. No reference material is permitted. An exception will be made for the case of examining a B1 or B2 candidate's ability to interpret technical documents.
- (f) The number of questions shall be at least 1 question per hour of instruction. The number of questions for each chapter and level shall be proportionate to:
 - the effective training hours spent teaching at that chapter and level,
 - the learning objectives as given by the training needs analysis.

The GCAA will assess the number and the level of the questions when approving the course.

- (g) The minimum examination pass mark is 75 %. When the type training examination is split in several examinations, each examination shall be passed with at least a 75 % mark. In order to be possible to achieve exactly a 75 % pass mark, the number of questions in the examination shall be a multiple of 4.
- (h) Penalty marking (negative points for failed questions) is not to be used.
- (i) End of module phase examinations cannot be used as part of the final examination unless they contain the correct number and level of questions required.
- (*) For the purpose of this point 4, a "chapter" means each one of the rows preceded by a number in the table contained in point 3.1(e).

4.3 Practical element assessment standard

After the practical element of the aircraft type training has been completed, an assessment must be performed, which must comply with the following:

- (a) The assessment shall be performed by designated assessors appropriately qualified.
- (b) The assessment shall evaluate the knowledge and skills of the trainee.

5. Type examination standard

Type examination will be conducted by the GCAA, or an organisation specifically approved by the GCAA for this purpose.

The examination shall be oral, written or practical assessment based, or a combination thereof and it shall comply with the following requirements.

- (a) Oral examination questions shall be open.
- (b) Written examination questions shall be essay type or multiple-choice questions.
- (c) Practical assessment shall determine a person's competence to perform a task.
- (d) Examinations shall be on a sample of chapters (***) drawn from paragraph 3 training/examination syllabus, at the indicated level.
- (e) The incorrect alternatives shall seem equally plausible to anyone ignorant of the subject. All of the alternatives shall be clearly related to the question and of similar vocabulary, grammatical construction and length.
- (f) In numerical questions, the incorrect answers shall correspond to procedural errors such as corrections applied in the wrong sense or incorrect unit conversions: they shall not be mere random numbers.
- (g) The examination shall ensure that the following objectives are met:
 - 1. Properly discuss with confidence the aircraft and its systems.
 - 2. Ensure safe performance of maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks as appropriate for the type of aircraft, for example troubleshooting, repairs, adjustments, replacements, aircraft, rigging and functional checks such as engine run, etc., if required.
 - 3. Correctly use all technical literature and documentation for the aircraft.
 - 4. Correctly use specialist/special tooling and test equipment, perform removal and replacement of components and modules unique to type, including any on-wing maintenance activity
- (h) The following conditions apply to the examination:

1. The maximum number of consecutive attempts is three. Further sets of three attempts are allowed with a 1 year waiting period between sets. A waiting period of 30 days is required after the first failed attempt within one set, and a waiting period of 60 days is required after the second failed attempt.

The applicant shall confirm in writing to the maintenance training organisation or the GCAA to which they apply for an examination, the number and dates of attempts during the last year and the maintenance training organisation or the GCAA where these attempts took place. The maintenance training organisation or the GCAA is responsible for checking the number of attempts within the applicable timeframes.

2. The type examination shall be passed and the required practical experience shall be completed within the 3 years preceding the application for the rating endorsement on the Aircraft Maintenance Engineers Licence.
 3. Type examination shall be performed with at least one examiner present. The examiner(s) shall not have been involved in the applicant's training.
- (i) A written and signed report shall be made by the examiner(s) to explain why the candidate has passed or failed.

(**) For the purpose of this point 5, a "chapter" means each one of the rows preceded by a number in the tables contained in points 3.1(e) and 3.2(b).

6. On-the-Job Experience

On the Job Experience (OJE) shall be approved by the GCAA.

It shall be conducted at and under the control of a maintenance organisation appropriately approved for the maintenance of the particular aircraft type and shall be assessed by designated assessors appropriately qualified.

It shall have been started and completed within the 3 years preceding the application for a type rating endorsement.

- (a) Objective:
The objective of OJE is to gain the required competence and experience in performing safe maintenance.
- (b) Content:
OJE shall cover a cross section of tasks acceptable to the GCAA. The OJE tasks to be completed shall be representative of the aircraft and systems both in complexity and in the technical input required to complete that task. While relatively simple tasks may be included, other more complex maintenance tasks shall also be incorporated and undertaken as appropriate to the aircraft type.

Each task shall be signed off by the student and countersigned by a designated supervisor. The tasks listed shall refer to an actual job card/work sheet, etc.

The final assessment of the completed OJE is mandatory and shall be performed by a designated assessor appropriately qualified.

The following data shall be addressed on the OJE worksheets/logbook:

1. Name of Trainee;
2. Date of Birth;
3. Approved Maintenance Organisation;
4. Location;
5. Name of supervisor(s) and assessor, (including licence number if applicable);
6. Date of task completion;
7. Description of task and job card/work order/tech log, etc.;
8. Aircraft type and aircraft registration;
9. Aircraft rating applied for.

In order to facilitate the verification by the GCAA, demonstration of the OJE shall consist of

- (i) detailed worksheets/logbook and
- (ii) a compliance report demonstrating how the OJE meets the requirement of this CAR.

On-the-Job-Experience

1. Aircraft type training may be subdivided in airframe and/or powerplant and/or avionics/electrical systems type training courses:
 - Airframe type training course means a type training course including all relevant aircraft structure and electrical and mechanical systems excluding the powerplant.
 - Powerplant type training course means a type training course on the bare engine, including the build-up to a quick engine change unit.
 - The interface of the engine/airframe systems should be addressed by either airframe or powerplant type training course. In some cases, such as for general aviation, it may be more appropriate to cover the interface during the airframe course due to the large variety of aircraft that can have the same engine type installed.
 - Avionics/electrical systems type training course means type training on avionics and electrical systems covered by but not necessarily limited to ATA (Air Transport Association) Chapters 22, 23, 24, 25, 27, 31, 33, 34, 42, 44, 45, 46, 73 and 77 or equivalent.
2. Practical training may be performed either following or integrated with the theoretical elements. However, it should not be performed before theoretical training.

3. The content of the theoretical and practical training should:

- address the different parts of the aircraft which are representative of the structure, the systems/components installed and the cabin; and
- include training on the use of technical manuals, maintenance procedures and the interface with the operation of the aircraft.

Therefore, it should be based on the following elements:

- Type design including relevant type design variants, new technology and techniques;
- Feedback from in-service difficulties, occurrence reporting, etc.;
- Significant applicable airworthiness directives and service bulletins;
- Known human factor issues associated with the particular aircraft type;
- Use of common and specific documentation, (when applicable, such as MMEL, AMM, MPD, TSM, SRM, WD, AFM, tool handbook), philosophy of the troubleshooting, etc.;
- Knowledge of the maintenance on-board reporting systems and ETOPS maintenance conditions, when applicable;
- Use of special tooling and test equipment and specific maintenance practices including critical safety items and safety precautions;
- Significant and critical tasks/aspects from the MMEL, CDL, Fuel Tank Safety (FTS), airworthiness limitation items (ALI) including Critical Design Configuration Control Limitations (CDCCL), CMR and all ICA documentation such as MRB, MPD, SRM, AMM, etc., when applicable.
- Maintenance actions and procedures to be followed as a consequence of specific certification requirements, such as, but not limited to, RVSM (Reduced Vertical Separation Minimum) and NVIS (Night Vision Imaging Systems);
- Knowledge of relevant inspections and limitations as applicable to the effects of environmental factors or operational procedures such as cold and hot climates, wind, moisture, sand, de-icing/anti-icing, etc.

The type training does not necessarily need to include all possible customer options corresponding to the type rating described in the Appendix I to AMC to CAR 66.

4. Limited avionic system training should be included in the category B1 type training as the B1 privileges include work on avionics systems requiring simple tests to prove their serviceability.
5. Electrical systems should be included in both categories of B1 and B2 type training.
6. The theoretical and practical training should be complementary and may be:
 - Integrated or split;

- Supported by the use of training aids, such as, trainers, virtual aircraft, aircraft components, synthetic training devices (STD), computer-based training devices (CBT), etc.

Training Needs Analysis for the Theoretical Element of the Aircraft Type Training

1. The minimum duration for the theoretical element of the type rating training course, as described in Appendix III to CAR 66, has been determined based on:
 - generic categories of aircraft and minimum standard equipment fit;
 - the estimated average duration of standard courses.

2. The purpose of the Training Needs Analysis (TNA) is to adapt and justify the duration of the course for a specific aircraft type. This means that the TNA is the main driver for determining the duration of the course, regardless of whether it is above or below the minimum duration described in Appendix III to CAR 66.

In the particular case of type training courses approved on the basis of the requirements valid before CAR 66 revision 01 was applicable (01 July 2013) and having a duration for the theoretical element equal to or above the minimum duration contained in paragraph 3.1(c) of Appendix III to CAR 66, it is acceptable that the TNA only covers the differences introduced by CAR 66 revision 01 in paragraph 3.1(e) "Content" and the criteria introduced in paragraph 3.1(d) "Justification of course duration" related to the minimum attendance and the maximum number of training hours per day. This TNA may result in a change in the duration of the theoretical element.

3. The content and the duration deriving from the TNA may be supported by an analysis from the Type Certificate holder.
4. In order to approve a reduction of such minimum duration, the evaluation done by the GCAA will be performed on a case-by-case basis appropriate to the aircraft type. For example, while it would be exceptional for a theoretical course for a large transport category aircraft such as an A330 or B757 to be below the minimum duration shown, it would not necessarily be exceptional in the case of a General Aviation (GA) business aircraft such as a Learjet 45 or similar. Typically, the TNA for a GA aircraft course would demonstrate that a course of a shorter duration satisfies the requirements.
5. When developing the TNA, the following should be considered:
 - (a) The TNA should include an analysis identifying all the areas and elements where there is a need for training as well as the associated learning objectives, considering the design philosophy of the aircraft type, the operational environment, the type of operations and the operational experience. This analysis should be written in a manner which provides a reasonable understanding of which areas and elements constitute the course to meet the learning objectives.
 - (b) As a minimum, the Training Need Analysis (TNA) should take into account all the applicable elements contained in paragraph 3.1 of CAR 66 Appendix III and associated AMCs.
 - (c) The TNA should set up the course content considering the Appendix III objectives for each level of training and the prescribed topics in the theoretical element table contained in paragraph 3.1 of CAR 66 Appendix III.

- (d) For each Chapter described in the theoretical element table contained in paragraph 3.1 of CAR 66 Appendix III, the corresponding training time should be recorded.
- (e) Typical documents to be used to identify the areas and elements where there is a need for training typically include, among others, the Aircraft Maintenance Manual, MRB report, CMRs, airworthiness limitations, Troubleshooting Manual, Structural Repair Manual, Illustrated Parts Catalogue, Airworthiness Directives and Service Bulletins.
- (f) During the analysis of these documents:
- Consideration should be given to the following typical activities:
 - Activation/reactivation;
 - Removal/installation;
 - Testing;
 - Servicing;
 - Inspection, check and repairs;
 - Troubleshooting/diagnosis.
 - For the purpose of identifying the specific elements constituting the training course, it is acceptable to use a filtering method based on criteria such as:
 - Frequency of the task;
 - Human factor issues associated to the task;
 - Difficulty of the task;
 - Criticality and safety impact of the task;
 - In-service experience;
 - Novel or unusual design features (not covered by CAR 66 Appendix I);
 - Similarities with other aircraft types;
 - Special tests and tools/equipment.
 - It is acceptable to follow an approach based on:
 - Tasks or groups of tasks; or
 - Systems or subsystems or components.
- (g) The TNA should:
- Identify the learning objectives for each task, group of tasks, system, subsystem or component;
 - Associate the identified tasks to be trained to the regulatory requirements (table in paragraph 3.1 of Appendix III to CAR 66);
 - Organise the training into modules in a logical sequence (adequate combination of chapters as defined in Appendix III of CAR 66);
 - Determine the sequence of learning (within a lesson and for the whole syllabus);

-
- Identify the scope of information and level of detail with regard to the minimum standard to which the topics of the TNA should be taught according to the set-up objectives.
 - Address the following:
 - Description of each system/component including the structure (where applicable);
 - System/component operation taking into account:
 - (a) Complexity of the system (e.g. the need of further breakdown into subsystems, etc.);
 - (b) Design specifics which may require more detailed presentation or may contribute to maintenance errors;
 - (c) Normal and emergency functioning;
 - (d) Troubleshooting;
 - (e) Interpretation of indications and malfunctions;
 - (f) Use of maintenance publications;
 - (g) Identification of special tools and equipment required for servicing and maintaining the aircraft;
 - (h) Maintenance Practices;
 - (i) Routine inspections, functional or operational tests, rigging/adjustment, etc.
 - Describe the following: The instructional methods and equipment, teaching methods and blending of the teaching methods to ensure the effectiveness of the training;
 - The maintenance training documentation/material to be delivered to the student;
 - Facilitated discussions, questioning session, additional practice-oriented training, etc.;
 - The homework, if developed;
 - The training provider's resources available to the learner.
 - (h) It is acceptable to differentiate between issues which have to be led by an instructor and issues which may be delivered through interactive simulation training devices and/or covered by web-based elements. Overall time of the course will be allocated accordingly.
 - (i) The maximum number of training hours per day for the theoretical element of type training should not be more than 6 hours. A training hour means 60 minutes of tuition excluding any breaks, examination, revision, preparation and aircraft visit. In exceptional cases, the GCAA may allow deviation from this standard when it is properly justified that the proposed number of hours follows pedagogical and human factors principles. These principles are especially important in those cases where:
 - Theoretical and practical training are performed at the same time;
 - Training and normal maintenance duty/apprenticeship are performed at the same time.

- (j) The minimum participation time for the trainee to meet the objectives of the course should not be less than 90 % of the tuition hours of the theoretical training course. Additional training may be provided by the training organisation in order to meet the minimum participation time. If the minimum participation defined for the course is not met, a certificate of recognition should not be issued.
- (k) The TNA is a living process and should be reviewed/updated based on operation feedback, maintenance occurrences, Airworthiness Directives, major service bulletins impacting maintenance activities or requiring new competencies for mechanics, alert service bulletins, feedback from trainees or customer satisfaction, evolution of the maintenance documentation such as MRBs, MPDs, MMs, etc. The frequency at which the TNA should be reviewed/updated is left to the discretion of the organisation conducting the course.

NOTE: The examination is not part of the TNA. However, it should be prepared in accordance with the learning objectives described in the TNA.

Practical Element of the Aircraft Type Training

1. The practical training may include instruction in a classroom or in simulators but part of the practical training should be conducted in a real maintenance or manufacturer environment.
2. The tasks should be selected because of their frequency, complexity, variety, safety, criticality, novelty, etc. The selected tasks should cover all the chapters described in the table contained in paragraph 3.2 of Appendix III to CAR 66.
3. The duration of the practical training should ensure that the content of training required by paragraph 3.2 of Appendix III to CAR 66 is completed.

Nevertheless, for aeroplanes with a MTOM equal or above 30 000 kg, the duration for the practical element of a type rating training course should not be less than two weeks unless a shorter duration meeting the objectives of the training and taking into account pedagogical aspects (maximum duration per day) is justified to the GCAA.

4. The organisation providing the practical element of the type training should provide trainees with a schedule or plan indicating the list of tasks to be performed under instruction or supervision. A record of the tasks completed should be entered into a logbook which should be designed such that each task or group of tasks may be countersigned by the designated assessor. The logbook format and its use should be clearly defined.
5. In paragraph 4.2 of Appendix III to CAR 66, the term “designated assessors appropriately qualified” means that the assessors should demonstrate training and experience on the assessment process being undertaken and be authorised to do so by the organisation.
Further guidance about the assessment and the designated assessors is provided in Appendix III to AMC to CAR 66.
6. The practical element (for powerplant and avionic systems) of the Type Rating Training may be subcontracted by the approved CAR 147 organisation under its quality system according to the provisions of 147.145(d)3 and the corresponding Guidance Material.

Differences training

Approved difference training is not required for different variants within the same aircraft type rating (as specified in Appendix I to AMC to CAR 66) for the purpose of type rating endorsement on the Aircraft Maintenance Engineers Licence.

However, this does not necessarily mean that no training is required before a certifying staff authorisation can be issued by the maintenance organisation (refer to AMC 66.20(b)3).

Section 5 of Appendix III: Aircraft Type Training and Examination Standard, On-the-Job-Experience

This Section 5 “Type Examination Standard” does not apply to the examination performed as part of type training. This Section only applies to those cases where type examination is performed as a substitute for type training.

On-the-job-Experience (OJE)

1. “A maintenance organisation appropriately approved for the maintenance of the particular aircraft type” means a CAR 145 or M.A. Subpart F approved maintenance organisation holding an A rating for such aircraft.
2. The OJE should include one-to-one supervision and should involve actual work task performance on aircraft/components, covering line and/or base maintenance tasks.
3. The use of simulators for OJE should not be allowed.
4. The OJE should cover at least 50 % of the tasks contained in Appendix II to AMC to CAR 66. Some tasks should be selected from each paragraph of the Appendix II list. Tasks should be selected among those applicable to the type of aircraft and licence (sub) category applied for. Other tasks than those in the Appendix II may be considered as a replacement when they are relevant. Typically, in addition to the variety and the complexity, the OJE tasks should be selected because of their frequency, safety, novelty, etc.
5. Up to 50 % of the required OJE may be undertaken before the aircraft theoretical type training starts, provided this is carried out within 90 days before the theoretical training starts.
6. The organisation providing the On-the-job-Experience should provide trainees with a schedule or plan indicating the list of tasks to be performed under supervision. A record of the tasks completed should be entered into a logbook which should be designed such that each task or group of tasks is countersigned by the corresponding supervisor. The logbook format and its use should be clearly defined.
7. Regarding the day-to-day supervision of the OJE programme in the approved maintenance organisation and the role of the supervisor(s), the following should be considered:
 - It is sufficient that the completion of individual OJE tasks is confirmed by the direct supervisor(s), without being necessary the direct evaluation of the assessor.
 - During the day-to-day OJE performance, the supervision aims at overseeing the complete process, including task completion, use of manuals and procedures, observance of safety measures, warnings and recommendations and adequate behaviour in the maintenance environment.
 - The supervisor(s) should personally observe the work being performed to ensure the safe completeness and should be readily available for consultation, if needed during the OJE performance.
 - The supervisor(s) should countersign the tasks and release the maintenance tasks as the trainee is still not qualified to do so.
 - The supervisor(s) should therefore:

- have certifying staff or support staff privileges relevant to the OJE tasks;
- be competent for the selected tasks;
- be safety-orientated;
- be capable to coach (setting objectives, giving training, performing supervision, evaluating, handling trainee's reactions and cultural issues, managing objectively and positively debriefing sessions, determining the need for extra training or reorientate the training, reporting, etc.);
- be designated by the approved maintenance organisation to carry out the supervision.

8. Regarding the assessor, the following should be considered:

- The function of the assessor, as described in Section 6 of Appendix III to CAR 66, is to conduct the final assessment of the completed OJE. This assessment should include confirmation of the completion of the required diversity and quantity of OJE and should be based on the supervisor(s) reports and feedback.
- In Section 6 of Appendix III to CAR 66, the term “designated assessor appropriately qualified” means that the assessor should demonstrate training and experience on the assessment process being undertaken and should be authorised to do so by the organisation.

Further guidance about the assessment and the designated assessors is provided in Appendix III to AMC to CAR 66.

9. The procedures for OJE should be included into the Exposition Manual of the approved maintenance organisation.

Aircraft Type Training and On-the-job-Experience

The theoretical and practical training providers, as well as the OJE provider, may contract the services of a language translator in the case where training is imparted to students not conversant in the language of the training material. Nevertheless, it remains essential that the students understand all the relevant maintenance documentation.

During the performance of examinations and assessments, the assistance of the translator should be limited to the translation of the questions, but should not provide clarifications or help in relation to those questions.

APPENDIX IV : Experience Requirements for Extending a CAR 66 Aircraft Maintenance Engineers Licence

The table below shows the experience requirements for adding a new category or subcategory to an existing CAR 66 licence.

The experience must be practical maintenance experience on operating aircraft in the subcategory relevant to the application.

The experience requirement will be reduced by 50 % if the applicant has completed an approved CAR 147 course relevant to the subcategory.

Appendix V : Aircraft Maintenance Licence

1. An example of the CAR 66 Aircraft Maintenance Engineers Licence can be found on the following pages (Appendix V).
2. The document must be printed in the standardised form shown but may be reduced in size to accommodate its computer generation if desired. When the size is reduced care should be exercised to ensure sufficient space is available in those places where official seals/stamps are required. Computer generated documents need not have all the boxes incorporated when any such box remains blank so long as the document can clearly be recognised as the CAR 66 Aircraft Maintenance Engineers Licence.
3. The document shall be printed in the English.
4. Each licence holder must have a unique licence number based upon a UAE identifier and an alpha-numeric designator.
5. The document may have the pages in any order and need not have some or any divider lines as long as the information contained is positioned such that each page layout can clearly be identified with the format of the example CAR 66 Aircraft Maintenance Engineers Licence contained herein. The aircraft type rating page need not be issued until the first type endorsement is included.
6. The document may be prepared by the GCAA or by any CAR 145 approved maintenance organisation in accordance with a procedure approved by the GCAA and contained in the CAR 145 maintenance organisation exposition except that in all cases the GCAA will issue the document.
7. The preparation of any variation to an existing CAR-66 Aircraft Maintenance Engineers Licence may be carried out by the GCAA or by any CAR 145 approved maintenance organisation in accordance with a procedure approved by the GCAA and contained in the CAR-145 maintenance organisation exposition except that in all cases the GCAA will issue the document with the variation.
8. The CAR 66 Aircraft Maintenance Engineers Licence once issued is required to be kept by the person to whom it applies in good condition and who shall remain accountable for ensuring that no unauthorised entries are made.
9. Failure to comply with paragraph 8 may invalidate the document and could lead to the holder not being permitted to hold any CAR 145 certification authorisation and may result in prosecution under UAE law.
10. With regard to the aircraft type rating page the GCAA may choose not to issue this page until the first aircraft type rating needs to be endorsed and will need to issue more than one aircraft type rating page when there are a number to be listed.
11. Notwithstanding 10 each page issued will be in this format and contain the specified information for that page.
12. If there are no limitations applicable, the LIMITATIONS page will be issued stating 'No limitations'.
13. Where a pre-printed format is used, any category, subcategory or type rating box which does not contain a rating entry shall be marked to show that the rating is not held.

VIII (b). Conditions:

- 1) This license must be signed by the holder.
- 2) Endorsement of any (sub) categories on the page(s) entitled CAR 66 (SUB) CATEGORIES only, does not permit the holder to issue a certificate of release to service for an aircraft.
- 3) This license when endorsed with an aircraft type rating meets the intent of ICAO Annex 1.
- 4) The privileges of the holder of this license are prescribed by CAR 66 and the applicable requirements of CAR M and CAR 145.
- 5) This license remains valid until the date specified unless previously suspended or revoked.
- 6) The privileges of this license may not be exercised unless in the preceding two years period the holder has had either six months of maintenance experience in accordance with the privileges granted by the license, or met the provision for the issue of the appropriate privileges.

Appendix VI : Basic knowledge requirements for category L aircraft maintenance licence

The definitions of the different levels of knowledge required in this Appendix are the same as those contained Appendix I to CAR 66.

Subcategories	Modules required for each subcategory (refer to the syllabus table below)
L: hot-air balloons	1L, 2L, 3L, 4L and 5L
L: gas balloons	1L, 2L, 3L, 7L and 5L
L: hot-air airships	1L, 2L, 3L, 4L, 5L, 6L, and 8L
L: gas airships	1L, 2L, 3L, 5L, 6L, 7L, and 8L

TABLE OF CONTENTS:

Module Designation	
1L	Basic knowledge
2L	Human factors
3L	Aviation legislation
4L	Balloon/Airship hot air
5L	Radio Com/ELT/Transponder/Instruments
6L	Power plant
7L	Balloon/Airship gas (free/tethered)
8L	Airships hot air/gas

MODULE 1L — BASIC KNOWLEDGE

MODULE 1L — BASIC KNOWLEDGE	Level
1L.1 Mathematics Arithmetic <ul style="list-style-type: none"> – Arithmetical terms and signs; – Methods of multiplication and division; – Fractions and decimals; – Factors and multiples; – Weights, measures and conversion factors; – Ratio and proportion; – Averages and percentages; – Areas and volumes, squares, cubes. Algebra – Evaluating simple algebraic expressions: addition, subtraction, multiplication and division; – Use of brackets; – Simple algebraic fractions. Geometry – Simple geometrical constructions; – Graphical representation: nature and uses of graphs. 	1
1L.2 Physics Matter <ul style="list-style-type: none"> – Nature of matter: the chemical elements; – Chemical compounds; – States: solid, liquid and gaseous; – Changes between states. Mechanics – Forces, moments and couples, representation as vectors; – Centre of gravity; – Tension, compression, shear and torsion; – Nature and properties of solids, fluids and gases. Temperature – Thermometers and temperature scales: Celsius, Fahrenheit and Kelvin; 	1

– Heat definition.	
1L.3 Electrics DC Circuits – Ohm's law, Kirchoff's voltage and current laws; – Significance of the internal resistance of a supply; – Resistance/resistor; – Resistor colour code, values and tolerances, preferred values, wattage ratings; – Resistors in series and parallel.	1
1L.4 Aerodynamics/aerostatics – International Standard Atmosphere (ISA), application to aerodynamics and aerostatics. Aerodynamics – Airflow around a body; – Boundary layer, laminar and turbulent flow; – Thrust, weight, aerodynamic resultant; – Generation of lift and drag: angle of attack, polar curve, stall. – Aerostatics – Effect on envelopes, wind effect, altitude and temperature effects.	1
1L.5 Workplace safety and environmental protection – Safe working practices and precautions when working with electricity, gases (especially oxygen), oils and chemicals; – Labelling, storage and disposal of hazardous (to safety and environment) materials; – Remedial action in the event of a fire or another accident with one or more hazards, including knowledge of extinguishing agents.	2

MODULE 2L — HUMAN FACTORS

MODULE 2L — HUMAN FACTORS	Level
2L.1 General – The need to take human factors into account; – Incidents attributable to human factors/human error; – Murphy's Law.	1
2L.2 Human performance and limitations Vision, hearing, information processing, attention and perception, memory.	1
2L.3 Social psychology Responsibility, motivation, peer pressure, teamwork.	1
2L.4 Factors affecting performance Fitness/health, stress, sleep, fatigue, alcohol, medication, drug abuse.	1
2L.5 Physical environment Working environment (climate, noise, illumination).	1

MODULE 3L — AVIATION LEGISLATION

MODULE 3L — AVIATION LEGISLATION	Level
3L.1 Regulatory Framework – Role of the GCAA; – Applicable CAR Part IV Section E, CAR Part V Chapter 1 (Sections 2.2.2 & 8) and Chapter 5 – BMO and CAR 66;	1

3L.2 Repairs and modifications – Approval of changes (repairs and modifications); – Standard changes and standard repairs.	2
3L.3 Maintenance data – Airworthiness Directives (ADs), Instructions for Continuing Airworthiness (ICA) (AMM, IPC, etc.); – Flight Manual; – Maintenance records.	2

MODULE 4L — BALLOON/AIRSHIP HOT AIR

MODULE 4L — BALLOON/AIRSHIP HOT AIR	Level
4L.1 Basic principles and assembly of hot-air balloons/airships – Assembly and individual parts; – Envelopes; – Envelope Materials; – Envelope Systems; – Conventional and special shapes; – Fuel System; – Burner, burner frame and burner support rods; – Compressed-gas cylinders and compressed-gas hoses; – Basket and alternative devices (seats); – Rigging accessories; – Maintenance and servicing tasks; – Annual/100-hour inspection; – Log Books; – Aircraft Flight Manuals (AFMs) and Aircraft Maintenance Manuals (AMMs); – Rigging and launch preparation (launch restraint); – Launch.	3
4L.2 Practical training Operating controls, maintenance and servicing jobs (according to flight manual).	3

MODULE 4L — BALLOON/AIRSHIP HOT AIR	Level
<p>4L.3 Envelope</p> <ul style="list-style-type: none"> – Fabrics; – Seams; – Load tapes, rip stoppers; – Crown rings; – Parachute valve and fast-deflation systems; – Ripping panel; – Turning vent; – Diaphragms/catenaries (special shapes and airships); – Rollers, pulleys; – Control and shroud lines; – Knots; – Temperature indication label, temperature flag, envelope thermometer; – Flying wires; – Fittings, karabiners. 	3
<p>4L.4 Burner and fuel system</p> <ul style="list-style-type: none"> – Burner coils; – Blast, liquid and pilot valves; – Burners/jets; – Pilot lights/vaporisers/jets; – Burner frame; – Fuel lines/hoses; – Fuel cylinders, valves and fittings. 	3
<p>4L.5 Basket and basket suspension (incl. alternative devices)</p> <ul style="list-style-type: none"> – Types of baskets (incl. alternative devices); – Basket materials: cane and willow, hide, wood, trim materials, suspension cables; – Seats, roller bearings; – Karabiner, shackle and pins; – Burner support rods; – Fuel cylinder straps; – Accessories. 	3
<p>4L.6 Equipment</p> <ul style="list-style-type: none"> – Fire extinguisher, fire blanket; – Instruments (single or combined). 	3
<p>4L.7 Minor repairs</p> <ul style="list-style-type: none"> – Stitching; – Bonding; – Basket hide/trim repairs. 	3
<p>4L.8 Procedures for physical inspection</p> <ul style="list-style-type: none"> – Cleaning, use of lighting and mirrors; – Measuring tools; – Measure of controls deflection (only airships); – Torque of screws and bolts; – Wear of bearings (only airships); – Inspection equipment; – Calibration of measuring tools; – Fabric Grab Test. 	2

MODULE 5L — RADIO COM/ELT/TRANSPONDER/INSTRUMENTS

MODULE 5L — RADIO COM/ELT/TRANSPONDER/INSTRUMENTS	Level
5L.1 Radio Com/ELT – Channel spacing; – Basic functional test; – Batteries; – Testing and maintenance requirements.	2
5L.2 Transponder – Basic operation; – Typical portable configuration including antenna; – Explanation of Modes A, C, S; – Testing and maintenance requirements.	2
5L.3 Instruments – Handheld altimeter/variometers; – Batteries; – Basic functional test.	2

MODULE 6L — POWER PLANT

MODULE 6L — POWER PLANT	Level
6L.1 Noise limits – Explanation of the concept of 'noise level'; – Noise certificate; – Enhanced sound proofing; – Possible reduction of sound emissions.	1
6L.2 Piston engines – Four-stroke spark ignition engine, air-cooled engine, fluid-cooled engine; – Two-stroke engine; – Rotary-piston engine; – Efficiency and influencing factors (pressure–volume diagram, power curve); – Noise control devices.	2
6L.3 Propeller – Blade, spinner, backplate, accumulator pressure, hub; – Operation of propellers; – Variable-pitch propellers, ground and in-flight adjustable propellers, mechanically, electrically and hydraulically; – Balancing (static, dynamic); – Noise problems.	2
6L.4 Engine control devices – Mechanical control devices; – Electrical control devices; – Tank displays; – Functions, characteristics, typical errors and error indications.	2

MODULE 6L — POWER PLANT	Level
<p>6L.5 Hosepipes</p> <ul style="list-style-type: none"> — Material and machining of fuel and oil hoses; — Control of life limit. 	2
<p>6L.6 Accessories</p> <ul style="list-style-type: none"> — Operation of magneto ignition; — Control of maintenance limits; — Operation of carburettors; — Maintenance instructions on characteristic features; — Electric fuel pumps; — Operation of propeller controls; — Electrically operated propeller control; — Hydraulically operated propeller control. 	2
<p>6L.7 Ignition system</p> <ul style="list-style-type: none"> — Constructions: coil ignition, magneto ignition, and thyristor ignition; — Efficiency of the ignition and preheat system; — Modules of the ignition and preheat system; — Inspection and testing of a spark plug. 	2
<p>6L.8 Induction and exhaust systems</p> <ul style="list-style-type: none"> — Operation and assembly; — Silencers and heater installations; — Nacelles and cowlings; — Inspection and test; — CO emission test. 	2
<p>6L.9 Fuels and lubricants</p> <ul style="list-style-type: none"> — Fuel characteristics; — Labelling, environmentally friendly storage; — Mineral and synthetic lubricating oils and their parameters: labelling and characteristics, application; — Environmentally friendly storage and proper disposal of used oil. 	2
<p>6L.10 Documentation</p> <ul style="list-style-type: none"> — Manufacturer documents for the engine and propeller; — Instructions for Continuing Airworthiness (ICA); — Aircraft Flight Manuals (AFMs) and Aircraft Maintenance Manuals (AMMs); — Time Between Overhaul (TBO); — Airworthiness Directives (ADs), technical notes and service bulletins. 	2
<p>6L.11 Illustrative material</p> <ul style="list-style-type: none"> — Cylinder unit with valve; — Carburetor; — High-tension magneto; — Differential-compression tester for cylinders; — Overheated/damaged pistons; — Spark plugs of engines that were operated differently. 	2

MODULE 6L — POWER PLANT	Level
<p>6L.12 Practical experience</p> <ul style="list-style-type: none"> — Work safety/accident prevention (handling of fuels and lubricants, start-up of engines); — Rigging-engine control rods and Bowden cables; — Setting of no-load speed; — Checking and setting the ignition point; — Operational test of magnetos; — Checking the ignition system; — Testing and cleaning of spark plugs; — Performance of the engine tasks contained in an aeroplane 100-hour/annual inspection; — Cylinder compression test; — Static test and evaluation of the engine run; — Documentation of maintenance work including replacement of components. 	2
<p>6L.13 Gas exchange in internal-combustion engines</p> <ul style="list-style-type: none"> — Four-stroke reciprocating engine and control units; — Energy losses; — Ignition timing; — Direct flow behaviour of control units; — Wankel engine and control units; — Two-stroke engine and control units; — Scavenging; — Scavenging blower; — Idle range and power range. 	2
<p>6L.14 Ignition, combustion and carburation</p> <ul style="list-style-type: none"> — Ignition; — Spark plugs; — Ignition system; — Combustion process; — Normal combustion; — Efficiency and medium pressure; — Engine knock and octane rating; — Combustion chamber shapes; — Fuel/air mix in the carburettor; — Carburettor principle, carburettor equation; — Simple carburettor; — Problems of the simple carburettor and their solutions; — Carburettor models; — Fuel/air mix during injection; — Mechanically controlled injection; — Electronically controlled injection; — Continuous injection; — Carburettor-injection comparison. 	2

MODULE 6L — POWER PLANT	Level
6L.15 Flight instruments in aircraft with injection engines – Special flight instruments (injection engine); – Interpretation of indications in a static test; – Interpretation of indications in flight at various flight levels.	2
6L.16 Maintenance of aircraft with injection engines – Documentation, manufacturer documents, etc.; – General maintenance instructions (hourly inspections); – Functional tests; – Ground test run; – Test flight; – Troubleshooting in the event of faults in the injection system and their correction.	2
6L.17 Workplace safety and safety provisions Work safety and safety provisions for work on injection systems.	2
6L.18 Visual aids: – Carburettor; – Components of injection system; – Aircraft with injection engine; – Tool for work on injection systems.	2
6L.19 Electrical propulsion – Energy system, accumulators, installation; – Electrical motor; – Heat, noise and vibration checks; – Testing windings; – Electrical wiring and control systems; – Pylon, extension and retraction systems; – Motor/propeller brake systems; – Motor ventilation systems; – Practical experience of 100-hour/annual inspections.	2
6L.20 Jet propulsion – Engine installation; – Pylon, extension and retraction systems; – Fire protection; – Fuel systems including lubrication; – Engine starting systems, gas assist; – Engine damage assessment; – Engine servicing; – Engine removal / refit and test; – Practical experience of conditional / run time / annual inspections; – Conditional inspections.	2
6L.21 Full authority digital engine control (FADEC)	2

MODULES 7L — BALLOON/AIRSHIP GAS (FREE/TETHERED)

MODULES 7L — BALLOON/AIRSHIP GAS (FREE/TETHERED)	Level
<p>7L.1 Basic principles and assembly of gas balloons/airships</p> <ul style="list-style-type: none"> — Assembly of individual parts; — Envelope and netting material; — Envelope, ripping panel, emergency opening, cords and belts; — Rigid gas valve; — Flexible gas valve (parachute); — Netting; — Load ring; — Basket and accessories (including alternative devices); — Electrostatic discharge paths; — Mooring line and drag rope; — Maintenance and servicing; — Annual inspection; — Flight papers; — Aircraft Flight Manuals (AFMs) and Aircraft Maintenance Manuals (AMMs); — Rigging and launch preparation; — Launch. 	3
<p>7L.2 Practical training</p> <ul style="list-style-type: none"> — Operating controls; — Maintenance and servicing jobs (according to AMM and AFM); — Safety rules when using hydrogen as lifting gas. 	3
<p>7L.3 Envelope</p> <ul style="list-style-type: none"> — Fabrics; — Poles and reinforcement of pole; — Ripping panel and cord; — Parachute and shroud lines; — Valves and cords; — Filler neck, Poeschel-ring and cords; — Electrostatic discharge paths. 	3
<p>7L.4 Valve</p> <ul style="list-style-type: none"> — Springs; — Gaskets; — Screwed joints; — Control lines; — Electrostatic discharge paths. 	3
<p>7L.5 Netting or rigging (without net)</p> <ul style="list-style-type: none"> — Kinds of net and other lines; — Mesh sizes and angles; — Net ring; — Knotting methods; — Electrostatic discharge paths. 	3
<p>7L.6 Load ring</p>	3

MODULES 7L — BALLOON/AIRSHIP GAS (FREE/TETHERED)	Level
7L.7 Basket (incl. alternative devices) — Kinds of baskets (incl. alternative devices); — Strops and toggles; — Ballast system (bags and supports); — Electrostatic discharge paths.	3
7L.8 Ripping cord and valve cords	3
7L.9 Mooring line and drag rope	3
7L.10 Minor repairs — Bonding; — Splicing hemp ropes.	3
7L.11 Equipment Instruments (single or combined).	3
7L.12 Tether cable (tethered gas balloons (TGB) only) — Kinds of cables; — Acceptable damage of cable; — Cable swivel; — Cable clamps.	3
7L.13 Winch (tethered gas balloons only) — Kinds of winches; — Mechanical system; — Electrical system; — Emergency system; — Grounding/ballasting of winch.	3
7L.14 Procedures for physical inspection — Cleaning, use of lighting and mirrors; — Measuring tools; — Measure of controls deflection (only airships); — Torque of screws and bolts; — Wear of bearings (only airships); — Inspection equipment; — Calibration of measuring tools; — Fabric grab test.	2

MODULES 8L — AIRSHIPS HOT AIR/GAS

MODULES 8L — AIRSHIPS HOT AIR/GAS	Level
8L.1 Basic principles and assembly of small airships — Envelope, ballonets; — Valves, openings; — Gondola; — Propulsion; — Aircraft Flight Manuals (AFMs) and Aircraft Maintenance Manuals (AMMs); — Rigging and launch preparation.	3
8L.2 Practical training — Operating controls; — Maintenance and servicing jobs (according to AMM and AFM).	3

MODULES 8L — AIRSHIPS HOT AIR/GAS	Level
8L.3 Envelope — Fabrics; — Ripping panel and cords; — Valves; — Catenary system.	3
8L.4 Gondola (incl. alternative devices) — Kinds of gondolas (incl. alternative devices); — Airframe types and materials; — Identification of damage.	3
8L.5 Electrical system — Basics about on-board electrical circuits; — Electrical sources (accumulators, fixation, ventilation, corrosion); — Lead, nickel-cadmium (NiCad) or other accumulators, dry batteries; — Generators; — Wiring, electrical connections; — Fuses; — External power source; — Energy balance.	3
8L.6 Propulsion — Fuel system: tanks, lines, filters, vents, drains, filling, selector valve, pumps, indication, tests, bonding; — Propulsion instruments; — Basics about measuring and instruments; — Revolution measuring; — Pressure measuring; — Temperature measuring; — Available fuel/power measuring.	3
8L.7 Equipment — Fire extinguisher, fire blanket;	3

Appendix VII : Basic examination standard for category L aircraft maintenance licence

- (a) The standardisation basis for examinations related to Appendix VI basic knowledge requirements shall be as follows:
- (i) all examinations must be carried out using the multiple-choice question format as specified in para (ii). The incorrect alternatives must seem equally plausible to anyone ignorant of the subject. All of the alternatives should be clearly related to the question and of similar vocabulary, grammatical construction and length. In numerical questions, the incorrect answers should correspond to procedural errors such as corrections applied in the wrong sense or incorrect unit conversions: they must not be mere random numbers;
 - (ii) each multiple-choice question must have three alternative answers of which only one must be the correct answer and the candidate must be allowed a time per module which is based upon a nominal average of 75 seconds per question;
 - (iii) the pass mark for each module is 75 %;
 - (iv) penalty marking (negative points for failed questions) is not to be used;
 - (v) the level of knowledge required in the questions must be proportionate to the level of technology of the aircraft category.
- (b) The number of questions per module shall be as follows:
- (i) module 1L 'Basic knowledge': 12 questions. Time allowed: 15 minutes;
 - (ii) module 2L 'Human factors': 8 questions. Time allowed: 10 minutes;
 - (iii) module 3L 'Aviation legislation': 24 questions. Time allowed: 30 minutes;
 - (iv) module 4L 'Balloon/Airship hot air': 36 questions. Time allowed: 45 minutes;
 - (v) module 5L 'Radio Com/ELT/transponder/instruments': 16 questions. Time allowed 20 minutes.
 - (vi) module 6L 'Power plant': 48 questions. Time allowed: 60 minutes;
 - (vii) module 7L 'Balloon/Airship gas (free/tethered)': 40 questions. Time allowed: 50 minutes;
 - (viii) module 8L 'Airships hot air/gas': 36 questions. Time allowed: 45 minutes;

APPENDICES TO AMCs TO CAR 66

APPENDIX I to AMC to CAR 66 : AIRCRAFT TYPE RATINGS FOR CAR 66 AIRCRAFT MAINTENANCE ENGINEERS LICENCE

The following aircraft type ratings are used to ensure a common standard.

The inclusion of an aircraft type in the list does not indicate that the aircraft type has been already granted a type certificate.

Notes on when the licence should be modified;

When a modification is introduced to an aircraft type rating or to an engine designation in the rating which affects licences already issued, the ratings on the AMEL licences may be modified at the next renewal or when the licence is reissued, unless there is an urgent reason to modify the licence.

Notes on aircraft modified by STC;

When an aircraft has been modified by an STC for installation of a different-engine, the CAR 66 type rating of this aircraft may change i.e. from Group 2 to Group 1. This is not reflected in this document. In case the applicant for a licence faces such a case, he/she or his/her company can inform the GCAA and a new type rating will be defined.

In the following tables:

- The column “TC Holder” includes the TC holder as defined in the TCDS (GCAA, EASA, FAA or other) or the Specific Airworthiness Specifications (SAS).
- Some TC holders’ designations have been corrected to add the information: ‘Aircraft with an SAS’. This means that the aircraft listed under this TC holder designation is considered an ‘orphan aircraft’. An aircraft becomes orphan when the legal person, organisation or entity holding the Type Certificate (TC) ceases to exist; or The TC holder no longer complies with his regulatory obligations; or The TC holder surrenders the TC.
- In Group 3, a third column has been added which is called ‘Type of structure’ which intends to assist the GCAA Licensing Department in identifying the experience required for this type with a view of removing existing limitations on the licence.
- Wooden structure covered with fabric is considered to fall under wooden structure. For Aeroplanes with a combination of structures; e.g. metal tubing fuselage and wooden wings, both experience ‘metal tube covered with fabric’ and ‘wooden structure’ are required.
- Only the designations of ratings included in the column “CAR 66 Type rating endorsement” will be used for endorsing individual type ratings on a CAR 66 licences.
- In Group 3, a fourth column has been added titled ‘MTOM’ which intends to assist the GCAA Licensing Department in identifying the aeroplane types where the Maximum Take-off Mass (MTOM) is:
 - Above 2T and is subject to a B1.2 licence, or
 - 2T and below and is subject to a B1.2 or B3 licence.

Notes on TR endorsement covering several models/variant:

The endorsement of a type rating (TR) on the aircraft maintenance engineer licence (AMEL), covering several models/variants, does not automatically imply that the AMEL holder has acquired the appropriate knowledge on each model/variant. The TR course received or the experienced the AMEL holder has gained, may have been limited to one or several model(s) variant(s) but not to all models/variants.

To demonstrate adequate competence on the relevant model(s)/variant(s), the AMEL holder and/or the maintenance organisation where the AMEL holder is contracted/employed, are responsible to verify whether the model/variant has been adequately covered by the TR course or gained experience.

Further explanation can be found in AMC 66.20(b)3 and AMC 145.35(a).

APPENDIX II to AMC to CAR 66 : AIRCRAFT TYPE PRACTICAL EXPERIENCE AND ON-JOB-EXPERIENCE– LIST OF TASKS

Time limits/Maintenance checks

- 100 hour check (general aviation aircraft).
- “B” or “C” check (transport category aircraft).
- Assist carrying out a scheduled maintenance check i.a.w. AMM.
- Review aircraft maintenance log for correct completion.
- Review records for compliance with Airworthiness Directives.
- Review records for compliance with component life limits.
- Procedure for inspection following heavy landing.
- Procedure for inspection following lightning strike.

Dimensions/Areas

- Locate components(s) by zone station number.
- Perform symmetry check.

Lifting and Shoring

- Assist in:
- Jack aircraft nose or tail wheel.
- Jack complete aircraft.
- Sling or trestle major component.

Levelling/Weighing

- Level aircraft.
- Weigh aircraft.
- Prepare weight and balance amendment.
- Check aircraft against equipment list.

Towing and Taxiing

Prepare for aircraft towing.
Tow aircraft.
Be part of aircraft towing team.

Parking and Mooring

Tie down aircraft.
Park, secure and cover aircraft.
Position aircraft dock.
Secure rotor blades.

Placards and Marking

Check aircraft for correct placards.
Check aircraft for correct markings.

Servicing

Refuel aircraft. Defuel aircraft.
Carry out tank to tank fuel transfer.
Check/adjust tire pressures.
Check/replenish oil level.
Check/replenish hydraulic fluid level.
Check/replenish accumulator pressure.
Charge pneumatic system.
Grease aircraft.
Connect ground power.
Service toilet/potable water system.
Perform preflight/daily check.

Vibration and Noise Analysis

Analyse helicopter vibration problem.
Analyse noise spectrum.
Analyse engine vibration.

Air Conditioning

Replace combustion heater.
Replace flow control valve.
Replace outflow valve.
Replace safety valve.
Replace vapour cycle unit.
Replace air cycle unit.
Replace cabin blower.
Replace heat exchanger.
Replace pressurisation controller. Clean outflow valves.
Deactivate/reactivate cargo isolation valve.
Deactivate/reactivate avionics ventilation components.
Check operation of air conditioning/heating system.
Check operation of pressurisation system.
Troubleshoot faulty system.

Auto flight

Install servos.
Rig bridle cables.
Replace controller.
Replace amplifier.
Replacement of the auto flight system LRUs for fly-by-wire aircraft.
Check operation of auto-pilot.
Check operation of auto-throttle/auto-thrust.
Check operation of yaw damper.
Check and adjust servo clutch.
Perform autopilot gain adjustments.
Perform mach trim functional check.
Troubleshoot faulty system.
Check autoland system.
Check flight management systems.
Check stability augmentation system.

Communications

Replace VHF com unit.
Replace HF com unit.
Replace existing antenna.
Replace static discharge wicks.
Check operation of radios.
Perform antenna VSWR check.
Perform Selcal operational check.
Perform operational check of passenger address system.
Functionally check audio integrating system.
Repair coaxial cable.
Troubleshoot faulty system.

Electrical Power

Charge lead/acid battery.
Charge Ni-Cad battery.
Check battery capacity.
Deep-cycle Ni-Cad battery.
Replace integrated drive/generator/alternator.
Replace switches.
Replace circuit breakers.
Adjust voltage regulator.
Change voltage regulator.
Amend electrical load analysis report.
Repair/replace electrical feeder cable.
Perform functional check of integrated drive/generator/alternator.
Perform functional check of voltage regulator.
Perform functional check of emergency generation system.

Equipment/Furnishings

Replace carpets.
Replace crew seats.

Replace passenger seats.
Check inertia reels.
Check seats/belts for security.
Check emergency equipment.
Check ELT for compliance with regulations.
Repair toilet waste container.
Remove and install ceiling and sidewall panels.
Repair upholstery.
Change cabin configuration.
Replace cargo loading system actuator.
Test cargo loading system.
Replace escape slides/ropes.

Fire protection

Check fire bottle contents.
Check/test operation of fire/smoke detection and warning system.
Check cabin fire extinguisher contents.
Check lavatory smoke detector system.
Check cargo panel sealing.
Install new fire bottle.
Replace fire bottle squib.
Troubleshoot faulty system.
Inspect engine fire wire detection systems.

Flight Controls

Inspect primary flight controls and related components i.a.w. AMM.
Extending/retracting flaps & slats.
Replace horizontal stabiliser. Replace spoiler/lift damper.
Replace elevator.
Deactivation/reactivation of aileron servo control.
Replace aileron.
Replace rudder.
Replace trim tabs.
Install control cable and fittings.
Replace slats.
Replace flaps.
Replace powered flying control unit.
Replace flat actuator.
Rig primary flight controls.
Adjust trim tab.
Adjust control cable tension.
Check control range and direction of movement.
Check for correct assembly and locking.
Troubleshoot faulty system.
Functional test of primary flight controls.
Functional test of flap system.
Operational test of the side stick assembly.
Operational test of the THS.
THS system wear check.

Fuel

Water drain system (operation).
Replace booster pump.
Replace fuel selector.
Replace fuel tank cells.
Replace/test fuel control valves.
Replace magnetic fuel level indicators.
Replace water drain valve.
Check/calculate fuel contents manually.
Check filters.
Flow check system.
Check calibration of fuel quantity gauges.
Check operation feed/selectors.
Check operation of fuel dump/jettison system.
Fuel transfer between tanks.
Pressure defuel.
Pressure refuel (manual control).
Deactivation/reactivation of the fuel valves (transfer defuel, X-feed, refuel).
Troubleshoot faulty system.

Hydraulics

Replace engine-driven pump.
Check/replace case drain filter.
Replace standby pump.
Replace hydraulic motor pump/generator.
Replace accumulator.
Check operation of shut off valve.
Check filters/clog indicators.
Check indicating systems.
Perform functional checks.
Pressurisation/depressurisation of the hydraulic system.
Power Transfer Unit (PTU) operation.
Replacement of PTU.
Troubleshoot faulty system.

Ice and rain protection

Replace pump.
Replace timer.
Inspect repair propeller deice boot.
Test propeller de-icing system.
Inspect/test wing leading edge de-icer boot.
Replace anti-ice/deice valve.
Install wiper motor.
Check operation of systems.
Operational test of the pitot-probe ice protection.
Operational test of the TAT ice protection.
Operational test of the wing ice protection system.
Assistance to the operational test of the engine air-intake ice protection (with engines operating).
Troubleshoot faulty system.

Indicating/recording systems

Replace flight data recorder.
Replace cockpit voice recorder.
Replace clock.
Replace master caution unit.
Replace FDR.
Perform FDR data retrieval.
Troubleshoot faulty system.
Implement ESDS procedures.
Inspect for HIRF requirements.
Start/stop EIS procedure.
Bite test of the CFDIU.
Ground scanning of the central warning system.

Landing Gear

Build up wheel.
Replace main wheel.
Replace nose wheel.
Replace steering actuator.
Replace truck tilt actuator.
Replace uplock/downlock assembly.
Replace shimmy damper.
Rig nose wheel steering.
Functional test of the nose wheel steering system.
Replace shock strut seals.
Servicing of shock strut.
Replace brake unit.
Replace brake control valve.
Bleed brakes.
Replace brake fan.
Test anti skid unit.
Test gear retraction.
Change bungees.
Adjust micro switches/sensors.
Charge struts with oil and air.
Troubleshoot faulty system.
Test auto-brake system.
Replace rotorcraft skids.
Replace rotorcraft skid shoes.
Pack and check floats.
Flotation equipment.
Check/test emergency blowdown (emergency landing gear extension).
Operational test of the landing gear doors.

Lights

Repair/replace rotating beacon.
Repair/replace landing lights.
Repair/replace navigation lights.
Repair/replace interior lights.
Replace ice inspection lights.

Repair/replace logo lights.
Repair/replace emergency lighting system.
Perform emergency lighting system checks.
Troubleshoot faulty system.

Navigation

Calibrate magnetic direction indicator.
Replace airspeed indicator.
Replace altimeter.
Replace air data computer.
Replace VOR unit.
Replace ADI.
Replace HSI.
Check pitot static system for leaks.
Check operation of directional gyro.
Functional check weather radar.
Functional check doppler.
Functional check TCAS.
Functional check DME.
Functional check ATC Transponder.
Functional check flight director system.
Functional check inertial nav system.
Complete quadrantal error correction of ADF system.
Update flight management system database.
Check calibration of pitot static instruments.
Check calibration of pressure altitude reporting system.
Troubleshoot faulty system.
Check marker systems.
Compass replacement direct/indirect.
Check Satcom.
Check GPS.
Test AVM.

Oxygen

Inspect on-board oxygen equipment.
Purge and recharge oxygen system.
Replace regulator.
Replace oxygen generator.
Test crew oxygen system.
Perform auto oxygen system deployment check.
Troubleshoot faulty system.

Pneumatic systems

Replace filter.
Replace air shut off valve.
Replace pressure regulating valve.
Replace compressor.
Recharge dessicator.
Adjust regulator.
Check for leaks.

Troubleshoot faulty system.

Vacuum systems

Inspect the vacuum system i.a.w. AMM.
Replace vacuum pump. Check/replace filters.
Adjust regulator.
Troubleshoot faulty system.

Water/Waste

Replace water pump.
Replace tap.
Replace toilet pump.
Perform water heater functional check.
Troubleshoot faulty system.
Inspect waste bin flap closure.

Central Maintenance System

Retrieve data from CMU.
Replace CMU.
Perform Bite check.
Troubleshoot faulty system.

Airborne Auxiliary power

Install APU.
Inspect hot section.
Troubleshoot faulty system.

Structures

Assessment of damage.
Sheet metal repair.
Fibre glass repair.
Wooden repair.
Fabric repair.
Recover fabric control surface.
Treat corrosion.
Apply protective treatment.

Doors

Inspect passenger door i.a.w. AMM.
Rig/adjust locking mechanism.
Adjust air stair system.
Check operation of emergency exits.
Test door warning system.
Troubleshoot faulty system.
Remove and install passenger door i.a.w. AMM. Remove and install emergency exit i.a.w. AMM.
Inspect cargo door i.a.w. AMM.

Windows

Replace windshield.
Replace direct vision window.

Replace cabin window.
Repair transparency.

Wings

Skin repair.
Recover fabric wing.
Replace tip.
Replace rib.
Replace integral fuel tank panel.
Check incidence/rig.

Propeller

Assemble prop after transportation.
Replace propeller.
Replace governor. Adjust governor.
Perform static functional checks.
Check operation during ground run.
Check track.
Check setting of micro switches.
Assessment of blade damage i.a.w. AMM.
Dynamically balance prop.
Troubleshoot faulty system.

Main Rotors

Install rotor assembly.
Replace blades.
Replace damper assembly.
Check track.
Check static balance.
Check dynamic balance.
Troubleshoot.

Rotor Drive

Replace mast.
Replace drive coupling.
Replace clutch/freewheel unit.
Replace drive belt.
Install main gearbox.
Overhaul main gearbox.
Check gearbox chip detectors.

Tail Rotors

Install rotor assembly.
Replace blades.
Troubleshoot.

Tail Rotor Drive

Replace bevel gearbox.
Replace universal joints.
Overhaul bevel gearbox.

Install drive assembly.
Check chip detectors.
Check/install bearings and hangers.
Check/service/assemble flexible couplings.
Check alignment of drive shafts.
Install and rig drive shafts.

Rotorcraft flight controls

Install swash plate.
Install mixing box.
Adjust pitch links.
Rig collective system.
Rig cyclic system.
Rig anti-torque system.
Check controls for assembly and locking.
Check controls for operation and sense.
Check controls for operation and sense.
Troubleshoot faulty system.

Power Plant

Build up ECU.
Replace engine.
Repair cooling baffles.
Repair cowling.
Adjust cowl flaps.
Repair faulty wiring.
Troubleshoot.
Assist in dry motoring check.
Assist in wet motoring check.
Assist in engine start (manual mode).

Piston Engines

Remove/install reduction gear.
Check crankshaft run-out.
Check tappet clearance.
Check compression.
Extract broken stud.
Install helicoil.
Perform ground run.
Establish/check reference RPM.
Troubleshoot.

Turbine Engines

Replace module.
Replace fan blade.
Hot section inspection/boroscope check.
Carry out engine/compressor wash.
Carry out engine dry cycle.
Engine ground run.
Establish reference power.
Trend monitoring/gas path analysis.

Troubleshoot.

Fuel and control, piston

Replace engine driven pump.
Adjust AMC.
Adjust ABC.
Install carburettor/injector.
Adjust carburettor/injector.
Clean injector nozzles.
Replace primer line.
Check carburettor float setting.
Troubleshoot faulty system.

Fuel and control, turbine

Replace FCU.
Replace Engine Electronic Control Unit (FADEC).
Replace Fuel Metering Unit (FADEC).
Replace engine driven pump.
Clean/test fuel nozzles.
Clean/replace filters.
Adjust FCU.
Troubleshoot faulty system.
Functional test of FADEC.

Ignition systems, piston

Change magneto.
Change ignition vibrator
Change plugs.
Test plugs.
Check H.T. leads.
Install new leads.
Check timing.
Check system bonding.
Troubleshoot faulty system.

Ignition systems, turbine

Perform functional test of the ignition system.
Check glow plugs/ignitors.
Check H.T. leads.
Check ignition unit.
Replace ignition unit.
Troubleshoot faulty system.

Engine Controls

Rig thrust lever.
Rig RPM control.
Rig mixture HP cock lever.
Rig power lever.
Check control sync (multi-eng).
Check controls for correct assembly and locking.

Check controls for range and direction of movement.
Adjust pedestal micro-switches.
Troubleshoot faulty system.

Engine Indicating

Replace engine instruments(s).
Replace oil temperature bulb.
Replace thermocouples.
Check calibration.
Troubleshoot faulty system.

Exhaust, piston

Replace exhaust gasket.
Inspect welded repair.
Pressure check cabin heater muff.
Troubleshoot faulty system.

Exhaust, turbine

Change jet pipe.
Change shroud assembly.
Install trimmers.
Inspect/replace thrust reverser.
Replace thrust reverser component.
Deactivate/reactivate thrust reverser.
Operational test of the thrust reverser system.

Oil

Change oil.
Check filter(s).
Adjust pressure relief valve.
Replace oil tank.
Replace oil pump.
Replace oil cooler.
Replace firewall shut off valve.
Perform oil dilution test.
Troubleshoot faulty system.

Starting

Replace starter.
Replace start relay.
Replace start control valve.
Check cranking speed.
Troubleshoot faulty system.

Turbines, piston engines

Replace PRT.
Replace turbo-blower.
Replace heat shields.
Replace waste gate.
Adjust density controller.

Engine water injection

Replace water/methanol pump.
Flow check water/methanol system.
Adjust water/methanol control unit.
Check fluid for quality.
Troubleshoot faulty system.

Accessory gear boxes

Replace gearbox.
Replace drive shaft.
Inspect magnetic chip detector.

APU

Removal/installation of the APU.
Removal/installation of the inlet guide-vane actuator.
Operational test of the APU emergency shut-down
Operational test of the APU.

SPECIFIC TASKS FOR BALLOONS AND AIRSHIPS

Tasks	Balloon			Airship	
	Hot air	Gas	Tethered gas	Hot air	Gas
General activities:					
Functionality test of aircraft (*)	X	X	X	X	X
Placards check or replace	X	X	X	X	X
Documentation annual inspection, repair, ADs, equipment (*)	X	X	X	X	X
Classification repair (*)	X	X	X	X	X
Weighing:					
Weighing and weighing report (*)	X	X	X	X	X
Servicing:					
Lubrication of controls when applicable			X	X	X
Cleaning envelope, basket, burner	X	X	X	X	X
Inspections:					
Eight annual inspections (covering at least 3 different types) (*)	X				
Five annual inspections (covering at least 2 different types) (*)		X			
Three annual inspections (covering at least 2 different types) (*)			X	X	
Two annual inspections (*)					X
Strength test of envelope fabric (*)	X	X	X	X	X
Flight control systems — Removal — Inspection — Reinstallation					
Control surface cable					X
Trim system					X
Safeguarding of pins, screws, castellated nuts (*)			X	X	X
Stick and pedals					X

Hydromechanical control systems			X		X
Ballonet control systems (*)			X	X	X
Electrical control systems			X		X
Valves (gas valve, turning vent, parachute or rip panel) (*)	X	X	X	X	X
Control and shroud lines and pulleys	X	X	X	X	X
Elevator – stabilizer (incl. balancing if applicable)					X
Rudder (incl. balancing if applicable)					X
Drag rope		X			

Tasks	Balloon			Airship	
	Hot air	Gas	Tethered gas	Hot air	Gas
Electrical system:					
Removal – installation of electrical wires			X	X	X
Removal – installation of electrical components			X	X	X
Servicing of batteries	X	X	X	X	X
Communication system – Transponder:					
Removal – installation of COM	X	X	X	X	X
Removal – installation of NAV					X
Removal – installation of XPDR	X	X	X	X	X
Installation of antenna	X	X	X	X	X
Replacement of antenna cable	X	X	X	X	X
Cabin – Equipments:					
Pitot / static systems – tubes removal - installation - replacement					X
Flight instruments removal - installation - replacement	X	X	X	X	X
Installation of an approved system	X	X	X	X	X
Magnetic compass installation - compensation					X
Fire extinguisher	X			X	X
Ballast - Replacement of:					
Water ballast (when applicable)					X
Sand/shot ballast (when applicable)		X	X		X
Valves - inspection and rigging of valves					X
Envelope:					
Inspection and repair of envelope panels/gores/seams	X	X	X	X	X
Inspection and repair of load tapes and attachment points	X	X	X	X	X
Inspection and repair of deflation system	X	X		X	
Inspection and repair of net		X	X		
Inspection and repair of mooring system			X		

Electrostatic conductivity test (if type is approved for hydrogen) (*)		X			X
Ballonet inspection and repair			X		X
Inspection and fabrication of a suspension cable or rope	X	X	X	X	X
Inspection and fabrication of a catena				X	X
Load ring/frame:					
Crack detection (welded and machined parts) (*)	X	X	X	X	
Tasks	Balloon			Airship

Heater system:					
Removal, inspection and re-installation	X			X	
Inspection and cleaning of vaporizer and filter (*)	X			X	
Inspection and replacement of hoses (*)	X			X	
Inspection and replacement of pilot flame ignition unit (*)	X			X	
Sealing of fittings (*)	X			X	
Pressure and leak test (*)	X			X	
Disassembly an assembly of fuel cell (*)	X			X	
10-year inspection of fuel cell	X			X	
Basket/gondola:					
Removal, inspection and re-installation (as applicable)	X	X	X	X	X
Inspection and fabrication of a suspension cable or rope (*)	X	X			
Removal – installation of padding	X	X			
Removal – installation of belts - safety harness				X	X
Removal – installation of essential elements of the cabin	X	X	X	X	X
Inspection and fabrication of a basket wire	X	X	X		
Inspection of operational equipment and its fixation points	X	X	X	X	X
Crack detection and repair (welded parts and frames)	X	X	X	X	X
Landing gear:					
Removal, inspection and re-installation of wheels			X	X	X
Removal, inspection and re-installation of brakes					X
Removal, inspection and re-installation of shock absorber					X
Fuel – Engine – Propeller – Engine instruments systems:					
Refer to tasks in blocks for aeroplanes				X	X

Wood structure:					
Structure repair		X	X	X	
Protective coating					

Tasks	Balloon			Airship	
	Hot air	Gas	Tethered gas	Hot air	Gas
Composite structure:					
Laminate repair			X		X
Sandwich structure repair			X		X
Metal structures:					
Crack detection (welded and machined parts)	X	X	X	X	X
Riveting jobs				X	X
Bonding of structures		X	X	X	X
Anti-corrosion treatment			X	X	X
Repair of fairings			X		X
Engine:					
Tasks for aeroplanes of comparable certification level				X	X
Exhaust system:					
Tasks for aeroplanes of comparable certification level				X	X
Propeller:					
Tasks for aeroplanes of comparable certification level				X	X
Fuel system:					
Tasks for aeroplanes of comparable certification level				X	X
Hydraulic system:					
Tasks for aeroplanes of comparable certification level				X	X
Pneumatic system:					
Tasks for aeroplanes of comparable certification level				X	X
Winch system:					
Witness winch inspection			X		

APPENDIX III to AMC to CAR 66 : EVALUATION OF THE COMPETENCE ASSESSMENT AND ASSESSORS

This Appendix applies to the competence assessment performed by the designated assessors (and their qualifications).

1. What does “competence” mean and areas of focus for assessment

The assessment should aim at measuring the competence by evaluating three major factors associated to the learning objectives:

- Knowledge;
- Skills;
- Attitude.

Generally, knowledge is evaluated by examination. The purpose of this document is not to describe the examination process: this material mainly addresses the evaluation of “skills” and “attitude” after training containing practical elements. Nevertheless, the trainee needs to demonstrate sufficient knowledge to perform the required tasks.

“Attitude” is indivisible from the “skill” as this greatly contributes to the safe performance of the tasks.

The evaluation of the competence should be based on the learning objectives of the training, in particular:

- the (observable) desired performance. This covers what the trainee is expected to be able to do and how the trainee is expected to behave at the end of the training;
- the (measurable) performance standard that must be attained to confirm the trainee’s level of competence in the form of tolerances, constraints, limits, performance rates or qualitative statements; and
- the conditions under which the trainee will demonstrate competence. Conditions consist of the training methods, the environmental, situational and regulatory factors.

The assessment should focus on the competencies relevant to the aircraft type and its maintenance including, but not limited to:

- Environmental awareness (act safely, apply safety precautions and prevent dangerous situations);
- Systems integration (demonstrate understanding of aircraft systems interaction – identify, describe, explain, plan, execute);
- Knowledge and understanding of areas requiring special emphasis or novelty (areas peculiar to the aircraft type, domains not covered by CAR 66 Appendix I, practical training elements that cannot be imparted through simulation devices, etc.);

-
- Using reports and indications (the ability to read and interpret);
 - Aircraft documentation finding and handling (identify the appropriate aircraft documentation, navigate, execute and obey the prescribed maintenance procedures);
 - Perform maintenance actions (demonstrate safe handling of aircraft, engines, components and tools);
 - Aircraft final/close-up and report (apply close up, initiate appropriate actions/follow-up/ records of testing, establish and sign maintenance records/logbooks).

2. How to assess

As far as feasible, the objectives of the assessment should be associated with the learning objectives and the passing level; it means that observable criteria should be set to measure the performance and should remain as objective as possible.

The general characteristics of effective assessment are: objective, flexible, acceptable, comprehensive, constructive, organised and thoughtful. At the conclusion, the trainee should have no doubt about what he/she did well, what he/she did poorly and how he/she can improve.

The following is a non-exhaustive list of questions that may be posed to assist the assessment:

- What are the success factors for the job?
- What are typical characteristics of a correct behavior for the task?
- What criteria should be observed?
- What level of expertise is expected?
- Is there any standard available?
- What is the pass mark? For example:
 - “Go-no go” situation;
 - How to allocate points? Minimum amount to succeed;

- “Must know or execute” versus “Good to know or execute” versus “Don’t expect the candidate to be an expert”.
- Minimum or maximum time to achieve? Use time effectively and efficiently.
- What if the trainee fails? How many times is the trainee allowed to fail?
- When and how should the trainee be prepared for the assessment?
- What proportion of judgment by the instructor out of collaboration with the trainee is needed during the evaluation stage?

The assessment may be:

- Diagnostic (prior to a course), formative (reorientate the course on areas where there is a need to reinforce) or summative (partial or final evaluation);
- Performed task-by-task, as a group of tasks or as a final assessment.

One method might be an initial assessment to be performed by the trainee himself/herself, then discussing areas where the perceptions of the trainee’s performance by the assessors differ in order to:

- Develop the self-assessment habits;
- Make the assessment more acceptable and understandable to both parties.

A “box-ticking” exercise would be pointless. Experience has shown that assessment sheets have largely evolved over time into assessment of groups of “skills” because in practice such things eventually detracted from the training and assessment that it was intended to serve: evaluate at a point of time, encourage and orientate the training needs, improve safety and ultimately qualify people for their duties.

In addition, many other aspects should be appropriately considered during the assessment process such as stress and environmental conditions, difficulty of the test, history of evaluation (such as tangible progresses or sudden and unexpected poor performance made by the trainee), amount of time necessary to build competence, etc.

All these reasons place more emphasis on the assessor and highlight the function of the organisation’s approval.

APPENDICES TO GMs TO CAR 66

APPENDIX I to GM 66.50 (Limitations)

1. Detailed in the following table is a list of current limitations applicable to the holder of a GCAA CAR 66 licence. The table contains information on the basis for these limitations, the implications to the scope of the certifying engineer's responsibilities and details of how they may be removed.
2. For those wanting to remove limitations and hold a non-restricted CAR 66 licence, it will be necessary for the applicant to sit the appropriate examination, and where necessary, demonstrate appropriate experience relevant to the knowledge required to remove the limitation. The process for removal of limitations given below only refers to the specific limitation stated and does not address the removal of a combination of limitations.
3. Licence holders must apply for the removal of all limitations from the basic category in a single application.
4. The addition of another category (B1-2, B2 etc) to a CAR 66 licence will require the applicant to remove the limitations applied to their existing licence prior to the addition being granted. However, the existing licence may be extended with an additional type rating without the need to lift the limitations. Any new type added would have the same limitations added that apply to the basic licence categories.
5. Where a limitation is shown against the basic licence category, the limitation also applies to the type rating.

Limitation No		Reason/applicability	Implications	Requirements for removal of limitation
1.	Excluding electrical power generation & distribution system.	Applied to both B1 and B2 licence holders who did not already hold GCAA 'X' Electrical, or held no Certification privileges on aircraft below 5700kg.	No privileges to certify electrical work including removal/replacement/testing of any electrical component such as pressure transducers, heat sensing etc.	For Basic; Part exams in modules 3 (3.9 – 3.18), 7 (7.7), 11 (11.5, 11.6 and 11.14) plus full module 4. Plus Experience. (90 days minimum) For Type; Training on all mechanical/electrical systems to level 3 for B1. Training on all avionic electrical systems for B2. Plus experience (90 days minimum).
2.	Excluding instrument systems, INS/IRS and flight director systems.	Applied to B2 licence holders where GCAA "X" Instruments was not already held.	No privileges to certify instrument systems or flight directors in autopilot systems. This is in addition to limitations 3 & 4.	Limitation 2 not issued in isolation. Examination requirements to remove limitation are incorporated with other associated limitations.
3.	Excluding autopilot systems on Aeroplanes.	Applied to B2 licence where GCAA "X" Autopilot Aeroplanes was not already held.	No privileges to certify autopilot systems on Aeroplanes.	Limitation 3 not issued in isolation. Examination requirements to remove limitation are incorporated with other associated limitations.
4.	Excluding autopilot systems on helicopters.	Applied to B2 licence only where GCAA "X" autopilot rotorcraft was not already held.	No privileges to certify autopilot systems on Rotorcraft.	Examination in Part Module 13 (13.1, 13.3) required. No experience requirement.
5.	Excluding automatic landing and auto-throttle systems on aeroplanes.	Applied to B2 licence only where GCAA Combined category was not already held.	No privileges to certify auto-land and auto-throttle systems.	Examination in Part Module 13 (13.3,) 13.20, 13.21 and 13.22 for basic, and the appropriate systems for type rating. Plus experience (90 days minimum).

6.	Excluding radio Comm/Nav and radar systems.	Applied to a B2 licence where GCAA Radio Comm/Nav and Radio Radar were not already held.	No privilege to certify Comm/Nav/Radio/Radar Systems.	Examination in Part Module 13 (13.4, 13.6 13.8, 13.20, 13.21 and 13.22,) for basic, and the appropriate systems for type rating. Plus experience (180 days minimum).
7.	Excluding radio radar system.	Applied to a B2 licence where GCAA Radio Radar was not already held.	No privileges to certify Primary or Secondary Radar systems.	Examination in Part Module 13 (13.4, 13.20, 13.21 and 13.22) for basic, and the appropriate systems for type rating. Plus experience. (90 days minimum).
8.	NOT IN USE			
9.	Excluding avionics LRUs.	Applied to a B1 licence where an avionic extension authorisation was not already held.	No privilege to certify Avionics Systems.	Examination in full Module 5. For type rating, training in the avionics disciplines of the appropriate type course. Plus experience (10 days minimum).
10.	Excluding airframe.	Applied to B1 licence where GCAA 'Aeroplanes' or 'Rotorcraft' licence was not already held.	No privilege to certify Airframe Structure or Mechanical systems.	For Basic:Examination in Module 11A for B1.1 Module 11B for B1.2 Plus experience. (180 days minimum) For type rating; training in the airframe and systems elements of appropriate type. For a group rating oral examination on the aircraft groups or sub groups.

11.	Excluding engine.	Applied to B1 licence where GCAA 'Engine' licence was not already held.	No privileges to certify engine or engine/airframe interface.	For Basic; Examination in Module 15 and 17 for B1.1 Module 16 and 17 for B1.2 Plus experience. (180 days minimum) For type rating; training in the engine and airframe/engine interface or for non-complex types, oral examination.
12.	Excluding all pressurised Aeroplanes.	Applied to B1.2 licence where GCAA 'Airframe' licence excluded pressurised aeroplane structures.	No privileges to certify pressurised aeroplanes structures within any type-rating group.	Full module 11A for Category B1. 1 Full Module 11B for Category B1.2 Plus experience. (180 days minimum) For type rating; for non-complex types, oral examination.
13.	NOT IN USE			
14.	Excluding pressurised aeroplanes above 5700kg MTOM.	Applied to B1 licence where GCAA Aeroplanes 2 licence was not previously held.	No privileges to certify the structure or mechanical systems on aeroplanes with MTOA of >5700kg.	Examination in Part Module 11A (11.2, 11.3 and 11.4). Plus appropriate experience (180 days minimum).
15.	Excluding supercharged piston engines in aeroplanes.	Applied to B1.2 licence where GCAA engine licence excluded supercharged engines and variable pitch propellers.	No privileges to certify supercharged / turbocharged piston engines or Variable pitch propellers.	Examination in Part Module 16 (16.7) plus appropriate experience (90 days minimum).
16.	Excluding navigational and Electronic instrument systems, FDR, GPWS and vibration monitoring systems.	Applied to B2 licence where GCAA 'X' Instrument licence was not already held.	No privileges to certify electronic instrument systems, FDR. GPWS or vibration monitoring equipment.	Examination in Part Module 13 (13.4, 13.6 and 13.8, 13.20, 13.21 and 13.22) plus appropriate experience (90 days minimum) for basic licence and completion of appropriate type training for type rating.
17.	Excluding radio-coupled autopilot systems in aeroplanes.	Applied to B2 licence where GCAA 'X' Autopilot Aeroplanes was not already held.	No privilege to certify radio-coupled autopilot systems on aeroplanes.	Examination in Part Module 13 (13.3, 13.20, 13.21 and 13.22) plus appropriate experience (30 days minimum) For type rating; training in the radio-coupled autopilot systems appropriate to type.
18.	Excluding radio coupled autopilot systems in helicopters.	Applied to B2 licence where GCAA 'X' Autopilot Helicopters was not already held.	No privilege to certify radio- coupled autopilot systems on rotorcraft.	Examination in Part Module 13 (13.3) and appropriate experience (30 days minimum) For type rating, training in the radio coupled autopilot systems appropriate to type.

19.	Excluding all tasks with the exception of compass compensation and adjustment only.	To be deleted	To be deleted	To be deleted
20.	Excluding propeller-turbine engines.	Applied to Category B1.1 licence where a GCAA engine licence excluded 'Turbo propeller engines'.	No privilege to certify propeller, propeller controls or engine/propeller interface.	Examination in full Module 17. For type rating completion of appropriate type training.
21.	Excluding all tasks with the exception of minor scheduled line maintenance up to and including daily inspections.	Applied to any Category A licence where no licence had been previously held.	No privilege to certify rectification of defects, fault diagnosis.	Examination in all of the modules associated with Category A licence.
22.	Excluding all tasks with the exception of cabin maintenance tasks.	Applied to any Category A licence where no licence had been previously held.	No privileges to certify rectification of defects, fault diagnosis, except for cabin maintenance.	Examination in all of the modules associated with Category A licence.
23.	Excluding all tasks with the exception of DC electrical components in mechanical systems.	Applied to category B1 licence where no GCAA 'X' Electrical licence was already held.	No privileges to certify avionic /electrical systems.	Examination in Part Module 3 (3.9 – 3.18), 7 (7.7) and 11A or 11B (11.5, 11.6 and 11.14), full Modules 4 and 5, plus appropriate experience. For type rating completion of appropriate type training.
24.	Excluding all systems with the exception of LRUs within In Flight Entertainment (IFE) systems.	Applied to a Category A licence where no GCAA licence was already held.	No privileges to certify rectification of defects, fault diagnosis, except for IRUs associated with IFE.	Examination in all of the modules associated with Category A licence.
25.	Excluding AC electrical systems on aircraft above 5700kg MTOM, with the exception of component Changes that do not require specialist test equipment to prove serviceability.	Applied to Category B1 licence where no GCAA 'X' Electrical held.	No privileges to certify AC electrical systems on aircraft >5700kg.	Examination in full Module 4, Part Modules 3 (3.9 – 3.18), 7(7.7) and 11 (11.5, 11.6 and 11.14) plus appropriate experience (90 days minimum) For type rating completion of the electrical element of all mechanical systems to level III.

26.	Excluding avionic LRU replacement and BITE checks on aircraft above 5700kg MTOM.	Applied to Category B1 licence holders where no GCAA 'Avionic' licence held except where limited avionic system authorisation under AWN 3 had been issued.	No privileges to certify avionic systems on aircraft > 5700kg.	Examination in Module 5 plus experience (10 days minimum) For type rating completion of appropriate type training.
27.	Excluding antenna and antenna Feeder Systems relating to radio and radar systems.	Applied to B2 licence holders where no GCAA licence held.	No certification privileges for antenna systems associated with Radio/Radar.	No conversion examinations. Specific company scheme applies.
28.	Excluding maintenance tasks on wooden structures and fabric coverings.	Applied to CAR 66 category B1 licences where no GCAA licence held for wood and fabric aircraft.	No privilege to certify wood and fabric structured aircraft.	Examination in Part Module 6 (6.3.2 and 6.3.3). For type rating; for non-complex types, oral examination.
29.	Excluding compass compensation and adjustment.	Applied to Category B1/B2 licence where no GCAA 'X' compass held.	No privilege to certify compass compensation and adjustment.	Examination in Part Module 13 (13.8).
